MINISTRY OF HEALTH

ANNUAL HEALTH SUB-PROGRAMME PERFORMANCE REPORT

FY 2024/25

TABLE OF CONTENTS

LIST OF TABLES.....	iii
LIST OF FIGURES	vi
ACRONYMS AND ABBREVIATIONS	viii
FORWARD	xi
ACKNOWLEDGEMENT	xii
EXECUTIVE SUMMARY	xiii

CHAPTER 1: INTRODUCTION..... 20

1.1 BACKGROUND.....	21
1.2 SPECIFIC OBJECTIVES.....	22
1.3 SECTOR STRATEGIC DIRECTION.....	22
1.4 HEALTH SUB-PROGRAMME PRIORITIES FOR THE FY 2024/25	22
1.5 DEMOGRAPHICS FOR FY 2024/25	23
1.6 PROCESS OF COMPILING THE REPORT	24

CHAPTER 2: OVERALL SECTOR PERFORMANCE AND PROGRESS 25

2.1 PERFORMANCE AGAINST THE NDP III KEY RESULT AREAS (KRAS)	26
2.2 DISEASE BURDEN.....	36
2.2.1 Outpatients Department (OPD) Attendances	36
2.2.2 Common Conditions in OPD Attendances.....	38
2.2.3 Injuries among OPD Attendances	41
2.2.4 Status of Emergency Medical Services in Uganda.....	43
2.2.5 Mental Health Conditions among OPD Attendance.....	44
2.2.6 Inpatient Admissions.....	49
2.2.8 Inpatient Mortality (Deaths).....	52
2.3 PERFORMANCE AGAINST THE KEY HEALTH OUTCOME INDICATORS	54
2.4 ESSENTIAL MEDICINES AND HEALTH SUPPLIES (EMHS).....	89
2.4.1 Financing for Essential Medicines and Health Supplies.....	89
2.4.2 EMHS Credit Line at National Medical Stores (NMS).....	89
2.4.3 Essential Medicines Reporting	91
2.4.4 Average Availability of EMHS.....	91
2.4.5 Anti-Microbial Resistance (AMR) Surveillance	93
2.5 LABORATORY SERVICES	94
Laboratory External Quality Assurance (EQA).....	94

2.6 HEALTH FINANCING	96
2.6.1 Health Financing Landscape in Uganda	96
2.6.2 Budget Performance for FY 2024/25	98
2.6.4 Emerging Issues	101
CHAPTER 3: PERFORMANCE OF LOCAL GOVERNMENTS, HEALTH FACILITIES AND COMMUNITY HEALTH SERVICES	102
3.1 NATIONAL AND REGIONAL LEAGUE TABLES.....	103
3.1.1 The National League Table.....	103
3.1.2 The Regional League Table.....	105
3.2 HEALTH FACILITY LEVEL PERFORMANCE	106
3.2.1 Health Facility Outputs by Level of Care and Ownership	107
3.2.2 Performance of National Referral and Specialised Hospitals	107
3.2.3 Performance of Specialised Health Facilities.....	109
3.2.3 Performance of RRHs and Large PNFPs.....	115
3.2.4 Performance of the General Hospitals.....	117
3.2.5 Health Centre IV Performance.....	119
3.2.6 Health Centre III & II Performance	121
3.3 COMMUNITY HEALTH SERVICES	124
3.3.1 Village Health Teams.....	122
3.3.2 Community Health Extension Workers	123
3.3.3 CHEWS Performance.....	124
CHAPTER 4: PROGRESS IN IMPLEMENTATION OF THE MOH STRATEGIC PLAN FOR FY 2024/25.....	126
4.1 SUMMARY OF PERFORMANCE FOR FY 2024/25.....	127
4.2 PROGRESS IN IMPLEMENTATION OF THE HEALTH SECTOR PROJECTS	167
4.2 PROGRESS IN IMPLEMENTATION OF 30th JRM AIDE MEMIORE.....	169
ANNEX	173
ANNEX1: NATIONAL LEAGUE TABLE FY 2024/25	173
ANNEX 2: GENERAL HOSPITAL PERFORMANCE AGAINST APGS & DRGS	181
ANNEX 3: GENERAL HOSPITAL PERFORMANCE FOR QUALITY	186
ANNEX 4: HC IV PERFORMANCE AGAINST APGS AND DRGS	195
ANNEX 5: HC IV FUNCTIONALITY BASED ON PROVISION OF CEMNOC	226

FOREWORD

The Ministry of Health presents the Fifth and final Annual Health Sector Performance Report under the Third National Development Plan (NDP III) for the Financial Year 2024/2025. The report highlights the continued delivery of quality and equitable health services to approximately 48 million people in Uganda, including about 1.9 million refugees.

This report provides a comprehensive account of sector achievements, challenges, and lessons learned over the year. It highlights the continued commitment of the Government of Uganda and its partners to strengthen health systems for Universal Health Coverage (UHC) by 2030.

This AHSPR will be presented at the 31st Health Sector Joint Review Mission (JRM) in December 2025, where sector stakeholders will review progress, assess performance, and agree on strategic actions to accelerate delivery of health outcomes.

The sector saw improvements in surveillance and outbreak response, increased adoption of digital health innovations, and advancements in service delivery through the Primary Health Care (PHC) strategy, all of which demonstrated the commitment of health professionals in the face of persistent difficulties. However, the year was marked by major challenges, such as funding disruptions that impeded critical health interventions. As a result, the Government took swift action to preserve vital health services and protect performance gains.

I extend my deepest appreciation to all Ministries, Departments and Agencies, Local Governments, Health Development Partners, Civil Society Organizations, the Private Sector, and Communities for their continued support, and collaboration with the sector and your valued input into this report. Your partnership has been instrumental in sustaining the health system through this period of adjustment and transformation.

Special appreciation goes to the Permanent Secretary, Director General Health Services, and the core team from the Ministry for preparing this report and leading the organization of the 31st Joint Review Mission.

I urge all readers to use the insights in this report to promote evidence-based dialogue, advocacy, planning, and resource mobilization, with renewed commitment to our collective vision of a healthy and productive population for sustainable development.

Hon. Dr. Jane Ruth Aceng Ocero
MINISTER OF HEALTH

ACKNOWLEDGEMENT

I extend my deepest appreciation to all individuals and institutions that contributed to the preparation of the Annual Health Sector Performance Report (AHSPR) for the Financial Year 2024/2025.

This report represents the collective effort of many actors dedicated to improving the health and well-being of the people of Uganda.

Special recognition goes to the Core Team led by the Director General Health Services and the

Commissioner Health Information, Statistics, Monitoring and Evaluation for providing overall technical leadership and coordination of the report development process.

I also appreciate the invaluable contributions of the Health Development Partners, including WHO, CHAI, UNFPA, Global Fund, 3FHI, and HISP, for facilitating the preparation of the report and the organization of the Joint Review Mission.

The report draws on the hard work and commitment of all stakeholders—Local Governments, Public and Private Health Providers, Development Partners, Civil Society Organizations, and Community Structures—whose concerted efforts ensured implementation of planned interventions despite challenges arising from funding disruptions, commodity shortages, and system pressures during the year.

I also commend all technical departments of the Ministry of Health, the National, Specialized and Regional Referral Hospitals, and the District Health Teams for their continued dedication to data generation, analysis, and evidence-based performance tracking, which form the backbone of this report.

As we move into the new financial year, I urge all stakeholders to maintain the spirit of collaboration, innovation, and accountability that has kept our sector advancing even in times of constraint. Let us continue working together to strengthen systems, optimize resource use, and deliver equitable, quality health services for all people in Uganda.

Dr. Diana Atwine
PERMANENT SECRETARY
MINISTRY OF HEALTH

EXECUTIVE SUMMARY

This Annual Health Sector Performance Report for Financial Year 2024/25 is the fifth and final during the National Development Plan (NDP) III period and it mainly focuses on the progress in implementation of the health subprogram annual workplans FY 2024/25 based on the respective institutional and hospital 5-years Strategic Plans. The report will be presented and discussed during the 31st Health Sector Joint Review Mission (JRM) 9th and 10th December 2025 and the recommendations will guide planning, programming and budget allocation for the FY 2025/26.

The report has 4 chapters namely, 1) Introduction giving the background, sector strategic direction and sector priorities for FY2024/25; 2) Overall Sector Performance and Progress based on the NDP III KRAs, Performance of key outcome indicators, Disease Burden, Laboratory services, essential medicines and health supplies, health financing and health financing; 3) Performance of Local Governments, Health Facilities and Community Health Services; 4) Progress in implementation of the MoH Strategic Plan for FY2024/25.

Key Result Areas

The health sector contributed directly to six Key Results Areas (KRAs) of the Third National Development Plan. Performance was assessed using 30 indicators, of which 16 (51.6%) met their targets, 1(3.2%) made partial progress, while 14 (45.2%) fell below target. Despite fiscal constraints and disruptions in funding, the sector continued to make measurable gains in human resources, disease control, and service quality.

KRA 1 (Improved Skills Mix). This result area was 100% achieved as all the 2 indicators were satisfactorily met. The number of registered doctors increased from 9,388 to 10,433, and nurses and midwives from 119,132 to 133,542, meeting the annual target for health workers per 10,000 population. The number of physicians per 10,000 population increased 2.1 to 2.3 against baseline of 1. However, the overall staffing level in the health sector remained low at 34% of the new staffing structure.

KRA 2 (Reduced Morbidity and Mortality of the Population). KRA 2 comprises of 14 indicators of which 7(50%) have been fully met and 7 are in progress. New HIV infections declined to 0.79 (against a baseline of 1.3 and target 2) per 1,000 susceptible population, and the maternal mortality ratio improved to 189 (against a baseline of 336 and target 211) per 100,000 live births. Mortality due to WASH-related causes dropped to 28.1 (against a baseline of 54 and target 43) per 100,000 and total mortality from communicable diseases per 100,000 reduced to 16 (against a baseline of 60 and target 30) per 100,000. Nonetheless, malaria incidence rose by 11% to 260 cases per 1,000 population, exceeding the baseline of 293, and diarrheal illnesses among under-fives increased from 7.6% to 8.1% and still below the baseline of 6.9%, highlighting the need for intensified prevention measures. Only indicators for annual cardiovascular incidence cases could not be tracked but starting next FY this data will be collected using the HMIS tools.

IMPROVED SKILLS MIX

100%
Achieved

Doctors Increased from
9,388 to 10,433
Nurses & Midwives from
9,388 to 10,433

MORBIDITY AND MORTALITY

50%
have been fully met

New HIV
infections
declined to **0.79**

Maternal
mortality ratio
decreased to **189**

Mortality due to
WASH-related causes
dropped to **28.1**

Malaria
incidence
rose by **11%**

Diarrheal
illnesses
among under-fives
increased to **8.1%**

KRA 3 (Improvement in Social Determinants of Health and Safety). Under this result area, 62.5% (5/8) of indicators met targets while 3 were not achieved. Mortality due to injuries fell from 6.6% to 2.1%, obesity in children under five was 2.8% compared to a target of 3.7%, improved sanitation coverage was 44 compared to a target of 45, improved handwashing was 47 compared to a target of 50, and alcohol abuse rate at 4.4% compared to a target of 4.8%.

Indicators that were not met include Stunting, wasting and teenage pregnancy. Stunting under 5 was 25% compared to a target of 19% exceeding the baseline of 29%, wasting under five was 2.9% compared to a target of 1.8% exceeding the baseline of 4%, and prevalence of teenage pregnancy (15–19 years) was 24% compared to a target of 15% and baseline of 25%.

KRA 4 (Reduced Fertility and Dependence Ratio). KRA 4 comprises 3 indicators of which 2(66.7%) are met and 1(33.3%) is still in progress. Performance was strong, with the Total Fertility Rate declining to 4.5% according to the Census 2024 meeting the NDP III target and baseline of 5.4%. The unmet need for family planning fell slightly to 19.9%, and modern contraceptive use now reaches 4.29 million women, averting an estimated 1.6 million unintended pregnancies and 2,200 maternal deaths. However, the couple years of protection declined to 4.1 million, suggesting reliance on short-term methods.

KRA 5 on Universal Health Coverage (UHC). All the 3 indicators for UHC were not met. There is still low insurance coverage of 1.1% (against a baseline of 5.1% and compared to a target of 25%), high out of pocket expenditure of 27.4% compared to a target of 20% but exceeding the baseline of 42%, and low perceived quality services at public facilities at 59% compared to a target of 80%. Satisfaction was highest in Ankole (77%) and lowest in Acholi (39%), with private facilities (81%) performing better than public (61%). The level of client satisfaction at lower-level facilities was higher (68% in HCIII, and 69% in HCIVs) than the higher-level facilities (51% for NRH and 50% for RRs). The average national client satisfaction rate of 59% still falls below the 80% target – driven mainly by medicine stock-outs, long waiting times, and service costs.

KRA 6 on all Key Forms of Inequities Reduced. The target of 58% for universal health care access was not achieved, with the score at 49% as per the 2023 Global Monitoring Report, which represents a slight increase from a baseline of 45%. Overall, these results demonstrate progress in workforce expansion, mortality reduction, and service quality improvement, but also reveal persistent challenges in financing, malaria control, and client satisfaction. Strengthening health system resilience and resource predictability will be essential to sustain gains and accelerate progress toward Universal Health Coverage by 2030.

SOCIAL DETERMINANTS OF HEALTH AND SAFETY

62.5%

indicators met targets

Mortality due to injuries
6.6% to 2.1%

Indicators that were not met include

- Stunting
- Wasting and
- Teenage Pregnancy

Indicators progress include:

- Sanitation coverage
- Handwashing
- Alcohol abuse

FERTILITY AND DEPENDENCE RATIO

66.7%

are met

Total Fertility Rate declining to **4.5%**

Unmet need for family planning reduced to **19.9%** 

Adolescent fertility rate (Birth rate per 1,000) reduced to **61.2%** 

UNIVERSAL HEALTH COVERAGE

Indicators that were not met include

- Proportion of the population accessing health insurance (%) still at **1.1%** against **25%**

Indicators that were not met include

- Out of pocket health expenditure (financial protection for ill health)
- Readiness capacity of health facilities to provide general services

Disease Burden

OPD Attendances: Government health facilities constitute the preferred facilities for OPD attendance accounting for 77% of all OPD attendances, followed by PNFP (13%) and PFP (10%). Over 82% of all OPD attendees were the patients aged over 5 years compared to those who are younger. A deep dive reveals that over 66% of patients seek services from lower-level facilities (HCIII and HCIV) and the majority (over 40%) patients visited HCIII, most of which have recently been upgraded and functionalized, in conformance with the national referral system.

OPD Conditions: Malaria, cough or cold (no pneumonia) and urinary tract infections remain the three main causes of all OPD conditions. Malaria incidence was reduced to 261 compared to 280 cases per 1,000 persons in the previous year. The highest malaria incidence was noted in Acholi region (724), followed by Teso (514), Lango (488) and lowest in Kigezi (40) and Kampala (96) and lowest was recorded in Kigezi region (40).

Injuries amongst OPD Attendances: The total number of OPD attendances due to injuries reduced from 843,653 in FY2023/24 to 644,411 in FY 2024/25. Trauma due to other causes accounted for 57.6% of all injuries (compared to 42% in previous year), 18.9% related to road traffic injuries (RTIs) up from 15% in the previous year; and injuries due to Gender based violence at 11% up from 9% in the previous year. Among the RTIs, motorcycles accidents (56%) and motor vehicles (17.2%) were the leading cause of injuries. The region that recorded the highest number of RTIs was Kampala (904), followed by Busoga (697) and Lango (509) while the lowest level was recorded by Bunyoro (117) compared to a national average of 341.

Emergency Medical Services. A total of 855 emergency cases per 100,000 reported compared to 828 in previous year. Kampala recorded the highest number of emergency cases, followed by Busoga, Acholi and North Buganda. In contrast Bunyoro and Tooro recorded the lowest cases. 59.9% received care at the scene, 21.4% arrived at the health facility in an ambulance, 82.7% were attended to within an hour and 1.1% death occurred.

Mental Health Conditions. Mental health conditions in Uganda have been rising steadily from 455,153 cases in 2021/22 to 666,239 cases in 2024/25 with females constituting 57.4 of the patients. The leading mental health conditions are epilepsy (44.9%), unipolar depression disorder (15%) and bipolar disorder (10.8%). West Nile, Busoga, and North Buganda reported the highest burden of OPD attendance due to epilepsy. Relatively low levels of Epilepsy cases attending OPD were reported for Karamoja region.

In-patient Admissions. Inpatient admissions rose by 10.4% from 3,579,106 to 3,952,629 with children under 5 years accounting for 39.5% of all admissions compared to 36.1% in the previous year.

OPD ATTENDANCES

OPD attendance in government health facilities accounting for

77%

of all OPD attendances, followed by PNFP (13%) and PFP (10%).

OPD CONDITIONS

Malaria, cough or cold (no pneumonia) and urinary tract infections remain the three main causes

The highest malaria incidence was noted

Acholi **724**,
Teso **514**,
Lango **488**

and lowest in

Kigezi **40**
&
Kampala **96**

INJURIES AMONGST OPD ATTENDANCES

Number of OPD attendances due to injuries reduced from

843,653

to

644,411

motorcycles accidents **56%** and motor vehicles **17.2%**

EMERGENCY MEDICAL SERVICES

A total of **855** emergency compared to **828** in previous year

Received care at the scene

Arrived in an ambulance

Attended to within an hour

MENTAL HEALTH CONDITIONS

have been rising steadily from **455,153** to **666,239**

females constituting **57.4%** of the patients
epilepsy (44.9%), unipolar depression disorder (15%), bipolar disorder (10.8%).

IN-PATIENT ADMISSIONS

Inpatient admissions rose by

10.4%

Females above 5 years of age continue to lead the admissions at 35.6% compared to 41.6% in the previous year. Overall, HCIIIs accounted for the largest share of inpatient admissions (32.8%), followed by HCIVs (24.8%) and General Hospitals (24.5%). For PNFPs the highest number of inpatient admissions were at the General Hospitals. However, RRH and NRHs continue to receive the largest number of admissions per day at 67 and 56 patients per day respectively compared to only 2 patients per day for HCIIIs. 76% of all patient admissions were to government health facilities with Busoga and Kampala regions having the highest number of admissions while Bunyoro and North Central registered the lowest turnout. Malaria (26.8%), pneumonia (6%), septicemia (4.5%), cough & cold (4.5%), urinary tract infections (4.4%) and all neonatal conditions (4.3%), accounted for over 50 of all inpatient admission.

In-patient Mortality. As reported in the previous year over 75% of all facility deaths occur at General hospitals (30.5%), RRH (30%) and NRH (15.6%). Neonatal conditions (14.9%), pneumonia (8.3%), malaria (5%) and injuries (4.8%) account for the largest cause of mortality as was the case in previous years. 32% of neonatal death are premature babies that requires management. Death due to hypertension is on the rise accounting for 4.5% of all in-patient death compared to 2.8% in the previous year. North Buganda, Busoga and Bunyoro registered the highest number of malaria death. Although death due to injuries decreased by 14.9%, motorcycle and motor vehicle accidents still account for over 50% of death due to injuries.

Key Health Outcome Indicators

Out of the 32 key outcome indicators, 27 were evaluated during the reviewed year, while 5 were not because of insufficient data. Nine indicators were not met, eleven were in progress, and seven had been met.

Outcome Indicators Achieved. The outcome indicators that were met include measles immunization coverage under 1 year (97% against a target of 95%); ART Coverage (93% against a target of 91%) with more effort required to target children 0–9 years and adolescents 10–19 years;

ART Viral Load Suppression Rate amongst PLHAs on treatment with more efforts required to bring on board more children, adolescents and men (95% against a target of 95%); 100% detection and management of zoonotic diseases; girls immunized against cervical cancer (97% against a target of 90%); ANC 4th visit coverage (56% against a target of 56%) and percentage of pregnant women receiving ferrous sulphate supplement on first visit (71.5% against a target of 65%) with additional focus required to improve coverage in Kampala, South Buganda and Teso regions.

Outcome Indicators in Progress. Slow progress was registered in DPT3 coverage (97% compared to target of 100%) owing to equity challenges that are being addressed through engagement with CSOs; Insecticide Treated Nets coverage for malaria prevention (76.6% compared to target of 85%); TB case Notification Rate (176 against a target of 179) due to scale-down by some partners; districts eliminating blinding trachoma (96% compared to target of 100% for elimination) with only 58 out of the 61 target districts covered; Tobacco smoking rate remains 91.7% against a target 95%; health facility deliveries 71% (target 74%); CEMNOC in HC IVs 66.4% against a target 75% mainly due to challenges such as lack of blood fridges, infrastructure and staffing gaps; maternal death amongst 100,000 health facility deliveries was 69.1 against a target 20; facility based fresh still birth at 5.3 is an improvement from the previous year but still falls short of the target of 4; percentage of perinatal death reviewed 56.2% against a target of 60%; and under-five vitamin A second dose coverage 57% against a target of 80%.

Indicators that were not achieved include HIV positive pregnant women initiated on ARVs for EMTCT 91% against a target 95%, HIV exposed infants with first DNA/PCR test within 2 months 83% compared to a target 95%, and ART Retention Rate at 12 months 95% against a target 80% which declined compared to the previous year due to partner funding shortfalls resulting from the work stop orders that affected access of HIV/AIDS commodities and supplies. Leprosy patients with Grade 2 disability at time of diagnosis 17% against a target 5% due to high

numbers of leprosy patients in West Nile & Tooro region due influx of refugees from Congo and South Sudan; Hepatitis B vaccine dose 1st dose 18% (target 80%) due to stock-out of Hepatitis B vaccines; cervical cancer screening in women aged 20–45 years 23% against a target 50% due to limited awareness about cancer screening services as well as poorly equipped facilities; IPTP3 coverage for pregnant women 65% (target 90%) due to low update from late attendance; anemia screening at first prenatal visit was 28% against a target 65 due to inadequate supplies for anemia screening during prenatal visits and % maternal death reviewed 88% against a target 95% due to inadequate reporting.

Essential Medicines and Health Supplies

The financing need for Essential Medicines and Health Supplies (EMHS) increased by 14% to USD 1.06 billion due to factors such as population growth and disease burden. Current commitments of USD 515 million only satisfy 48.8% of this need, resulting in a funding gap of USD 491 million. Development partners provided 64.3% of available funding and 35.7% was from the Government of Uganda. Government is therefore looking into expanding funding in line with initiatives to enhance domestic funding as detailed in the 0-year Health Supply Chain Roadmap.

The EMHS credit line at National Medical Stores (NMS) grew by 26% to UGX 677.7 billion, with major increases at lower-level health facilities and specialized institutions. Similarly, the PNFP credit line at Joint Medical Stores (JMS) rose by 26% from the previous year maintaining nearly 100% utilization of efficiency and accountability within the sector and serving 556 facilities.

Nonetheless, reporting performance and commodity availability declined sharply, from January 2025, due to funding disruptions and system downtime following the USG stop-work order. Medicine stock status reporting dropped below 60% in several months, with completeness plunging to 3% in April 2025. Average national availability of the 50 tracer commodities stood at 62%, well below the 90% target. Facility-level availability of EMHS (53%), ARVs (59%),

and Lab commodities (50%) remained critical weak points, despite higher warehouse-level performance (77% overall).

These trends underscore the urgent need to stabilize supply chain financing, strengthen last-mile distribution, and invest in digital infrastructure and human capacity to ensure reliable, equitable access to medicines and health supplies across all levels of care.

Laboratory Services

Over the past five cycles, response rates for EID, VL, mRDT, CrAg, Gram, and HPV declined, mainly due to reagent stock-outs and equipment breakdowns. However, pass rates improved across most schemes, with CBC, culture & sensitivity, and urinalysis achieving ≥80% participation, and most schemes attaining ≥80% passrates following targeted mentorship. NEQAP expanded to include eight animal laboratories, one environmental health laboratory, and laboratories in five other countries participating in mRDT, Gram, culture & sensitivity, and CrAg schemes.

At the national level, test menu implementation improves progressively with the health facility level at the national level, test menu implementation improved progressively with the health facility level from 47% at HC III, 64% at HC IV, and 58% at GH, to 75% at RRH, indicating that higher-level facilities generally maintain better compliance with the recommended test menu.

Kampala had the highest compliance at the HC III level with 63%, while Kigezi excelled at the HC IV level with 68%. Kigezi also achieved the best results for general hospitals at 68%, and Busoga led at the RRH level with 81%. Conversely, Bunyoro (37%) and Teso (41%) had the lowest compliance at the HC III level, along with Karamoja (54%) at the HC IV level.

Health Financing

In FY 2024/25, the total health sector resource envelope amounted to UGX 4,069.84 billion and the contribution from Government of Uganda (GoU) was 68.5%, equivalent to approximately UGX 2,786.67 billion. This represents an increase of six (6%) percent for domestic financing

compared to the previous fiscal year. The contribution from donors (external financing) for the period under review stood at UGX 1,283.17 billion representing 31.5% of the sector budget.

The health sector's approved budget for FY 2024/25 is UGX 4.07 trillion, constituting 5.6% of the national budget, down from 7.7% the previous year). The GoU financing is primarily allocated to wages (31%) and non-wage recurrent expenses (32%), with only 5% earmarked for development expenditures, indicating ongoing underinvestment in infrastructure and capital projects.

Budget absorption improved to 86.2% from 82% in FY 2023/24, with budget releases at 97.2%. Notable performances were recorded by National Medical Stores (100%), Local Governments (97.7%), and Regional Referral Hospitals (95.8%). However, the Ministry of Health lagged with 63.1% absorption due to procurement delays and lengthy donor procedures.

Externally funded projects contributed 31.5% to sector financing, but average fund absorption was only 60%, with the Global Fund at 56% and Gavi at 33%, indicating underperformance due to issues like procurement bottlenecks and delayed disbursements. However, projects like the Karamoja Infrastructure Development Project- Phase II (97%) and UCREPP (84%) showed effective fund utilization and execution.

Overall, FY 2024/25 showed improved domestic resource mobilization and financial efficiency yet challenges in externally funded projects and limited development absorption could hinder infrastructure expansion and service delivery. Focus on strengthening public financial management, donor coordination, and procurement efficiency is essential for sustainable health sector financing.

Performance of Local Governments

The national average score for local government league tables rose from 73.6% in FY 2023/2024 to 76.9% in FY 2024/2025, with 50% of local governments exceeding the national average of 75.4%. Top performers were Kiruhura DLG, Bundibugyo DLG, Mbale DLG, Lira City, and Amolatar DLG, while the lowest performers

included Arua, Soroti, Butebo, Hoima, and Bukomansimbi. Regional performance ratings showed Lango at 64%, Bugisu at 63.4%, and Acholi at 63.9%, with South Buganda (54.7%), North Buganda (58.9%), and Bunyoro (53.5%) being the lowest performers.

Performance of Health Facilities

National, Regional, General Hospitals and Health Centres

Health facilities' performance is evaluated using Ambulatory Patient Groups (APGs) for outpatient services and Diagnosis Related Groups (DRGs) for inpatient services, alongside indicators of quality and efficiency. The increase in services from health centres indicates that the population is increasingly using primary health care (PHC) facilities as their first point of care. For example, there is a 10% reduction in utilisation of the National Referral Hospital (NRH) suggesting greater utilization of lower-level facilities in the Kampala metropolitan area. Public facilities accounted for 83% of outpatient services and 73% of inpatient services provided. However, the limited reporting by private-for-profit (PFP) facilities in the DHIS2 for outpatient services is an area of concern.

The average bed occupancy rate (BOR) for NRHs rose from 91% to 103%, with Butabika, Naguru, and Kawempe exceeding 100%, indicating a need for more infrastructure. The average length of stay (ALOS) remained unchanged at 6 days for National Referral and Specialized hospitals, while Butabika showed a notably high ALOS of 52 days which partly explains its high BOR. Conversely, MSWNH's BOR dropped from 29% to 27%, highlighting significant underutilization.

Specialized Health Facilities

During the Financial Year 2024/25, the Uganda Cancer Institute registered 8,372 new patients, with females representing 55% of cases, and the highest incidence in Q3 (2,228 patients), primarily due to cervical and breast cancers. The Uganda Heart Institute performed 201 paediatric cardiac surgeries and 123 adult cardiac surgeries, with closed-heart operations led by Pericardiectomy. Mulago Specialised Women and Neonatal Hospital reported extensive

referrals and services, exceeding targets in surgeries and ultrasound scans, while managing high-risk conditions. Butabika National Hospital noted 59,931 OPD visits, with a concerning 19% escapee rate among admissions and a bed occupancy rate of 224%. Kiruddu National Hospital conducted 19,729 dialysis sessions and is developing satellite sites to alleviate referral pressure. The specialized Burns and Plastic Unit admitted 1,046 inpatients. Mbale RRH achieved the highest performance score at 67%, followed by Mengo Hospital at 55%.

Public hospitals comprised six of the top ten performing hospitals, attributed to high-volume outputs, while employer-based PNFP hospitals also demonstrated strong performance. Nakasero Hospital, a private facility, ranked well due to its numerous specialized procedures. Private hospitals frequently appeared in the bottom rankings due to low volume outputs. Among Health Centre IVs, Kisenyi HC IV, Bujubuli HC IV, and Aboke HC IV were the highest ranked, recognized for their volumes of APGs and DRGs. Government HC IIIs yielded more DRGs and APGs; however, private HC IIIs and IIs made a significant contribution to DRG scores due to their diverse service offerings.

Performance of Community Health Services

During FY 2024/25, Uganda's Community Health Services program, as per the Ministry of Health's CHW Implementation Framework, focused on two key groups: Village Health Teams (VHTs) and Community Health Extension Workers (CHEWs). VHTs conducted 3.9 million child health assessments, a decline from prior years due to commodity stock-outs yet supported over 21,700 individuals with special needs.

The CHEW program expanded to 3,136 trained workers across 23 districts, with notable improvements in child nutrition and a 140% increase in facility-based deliveries. However, challenges such as funding disruptions and stock-outs threaten sustainability. Strengthening supply chains and financial mechanisms is crucial for consolidating advancements in Uganda's community health system and progressing towards Universal Health Coverage.

Integration of Health Services

Established the National Advisory Committee on Integration (NACI) with agreed terms of reference. A national task force for Service Delivery Integration was created, and stakeholder consultations were conducted.

As part of service delivery an Integrated Supportive Supervision tool was developed to assess facility readiness for integration. A first round of supervision visits was conducted from March to May with support from CDC, MoH, and the Clinton Health Access Initiative. Additionally, several health worker webinars were held, initially attracting 1,000 participants, to provide guidance on patient-centred care. The Integration Service Delivery Operational Guidelines were developed, and a baseline support supervision covering 65 facilities across all regions was conducted.

Health workforce initiatives included the development of integrated service delivery schedules by districts and facilities, support for validating health resources affected by the USG Stop Work Order, and plans to increase health sector staffing levels from 34% to 55% by 2030.

CHAPTER

1

INTRODUCTION

Minister of Health Dr Jane Ruth Aceng Otero together with members of the Uganda Cancer Institute Management Board

1.1 BACKGROUND

The Annual Health Sector Performance Report (AHSPR) for Financial Year (FY) 2024/25 has been compiled by the Ministry of Health (MoH) of the Republic of Uganda. It serves as an institutional monitoring and evaluation requirement, documenting the health sector's progress, achievements, challenges, and lessons learned. The report also proposes priorities for the health sector for the financial year 2026/27.

This report is the fifth AHSPR and the last within the Third National Development Plan (NDP III) period, providing detailed progress on health subprogram performance in the 6 Key Result Areas over the NDP III period. It includes

performance assessments for as Regions, Local Governments (LGs), Specialised, National Referral Hospitals, Regional Referral Hospitals (RRHs), General Hospitals (GHs), and Health Center (HC) IVs, utilizing Ambulatory Patient Group (APG) and Diagnosis Related Groups (DRG). It also assesses the preparation of the community Health Services.

This report is crucial as it will form the basis for planning, programming, and budget allocation for FY 2026/27 and informs future decisions regarding the health sector priorities for the NDP IV period.

1.3 SECTOR STRATEGIC DIRECTION

The strategic direction of the health sector as per the National Health policy is summarized below:

Vision

The vision of Uganda's health sector is "A healthy and productive population that contributes to economic growth and national development".

Mission

Our Mission is "To provide high quality and accessible health services to all people in Uganda, including addressing broader determinants of health to attain socioeconomic development and prosperous life"

Goal

Our goal is "to achieve and sustain good health for all people living in Uganda by providing promotive, preventive, curative, palliative, and rehabilitative health services".

HCDP primarily contributes to the NDP III objective Four to: enhance the productivity and social wellbeing of the population. Nonetheless, the programme also contributes to objectives, one on enhancing value addition in Key Growth Opportunities and objective two on strengthening private sector capacity to drive growth and create jobs. The HCDP goal is to improve productivity for increased competitiveness and better quality of life for all. The health sector contributes mainly to Objective 4 of the HCDP which is to "Improve population health, safety and management". The outcomes to be achieved by the health sector include increased life expectancy; reduced neonatal, infant, under 5 and maternal mortality rates and reduced fertility rate.

1.4 HEALTH SUB-PROGRAMME PRIORITIES FOR THE FY 2024/25

1. The Key priorities for the Health Sub-programme in FY 2024/25 were:
2. Promotion and implementation of integrated high impact interventions for the prevention, control and elimination of communicable, Non-Communicable and Neglected Tropical Diseases and Injuries. The aim was to reduce high-burden diseases such as Malaria, HIV/AIDS, Tuberculosis (TB), Neglected Tropical Diseases, and Hepatitis, as well as epidemic-prone diseases and malnutrition across all age groups, emphasizing a Primary Health Care Approach and prevent and control of cancer, cardiovascular diseases and trauma.
3. Provision of high-quality sexual and reproductive health and rights services to achieve optimal health for adolescents, mothers, new-born and infants. The focus was improving maternal, adolescent, and child health services at all levels of care.
4. Promotion of nutrition education for communities on the benefits of

balanced diets, food preparation, and the importance of nutrition especially for children, pregnant women and the elderly (Geriatric care).

5. Strengthen the National Ambulance System, Emergency Care and referral system. The aim was on the development and implementation of a National Emergency Services (ES) Policy and Strategic Plan, as well as the provision of ambulances. The broader effort to "Improve the functionality of the health system to deliver quality and affordable preventive, promotive, curative and palliative health care services" also covers aspects of emergency care.
6. Establishment of strong Primary Health Care and Community Health Services; and implementation of the Community Health Strategy hinged on the Parish Development Model approach. The major aim was at establishing and operationalizing mechanisms for effective collaboration and partnership for UHC at all levels including specific focus on "Community Health Services".
7. Construction/rehabilitation of health infrastructure and provision of medical equipment to improve quality of care at all levels.
8. Strengthen the network of medical reference laboratories and rapid response mechanism including establishment of the East African Community Regional Centre of Excellence for Virology at the Uganda Virus Research Institute and National Public Health Institute in Uganda.
9. Increase availability of the skilled health workforce through training, implementation of the new structure, development of a mixed community health workforce, strengthening regulation and performance management.
10. Increase access to affordable and quality medicines focusing on establishment of a Pharmaceutical Industrial Park and strengthening the National Drug Authority regulatory framework.
11. Establishment of a National e-Health Infrastructure (digitization) to facilitate service delivery through Telemedicine, e-Health Management Information System, Community Health Information System, including tracking of medicines and health workers performance.
12. Expansion of health insurance coverage and social health protection through a mandatory National Health Insurance Scheme for all residents in Uganda.
13. Strengthen responsiveness of healthcare by reviewing/developing standards and guidelines, institutionalization of the Regional Supervisory Mechanism, and planning, management and support services.

1.5 DEMOGRAPHICS FOR FY 2024/25

The key demographic variables used to assess coverage for outcome indicators for

the different age groups and interventions are shown in Table 1.

Table 1: Population for FY 2024/25

Demographic Variable	Proportion	Population
Total Population	100.0%	45,905,417
Male	48.6%	22,314,289
Female	51.4%	23,591,128
Children under 1 year	3.5%	1,591,993
Children under 5 years	14.8%	6,778,329

Demographic Variable	Proportion	Population
Children below 18 years	49.6%	22,750,701
Adolescents and youth (young people) (10 –19 years)	24.8%	11,404,639
Expected pregnancies	4.0%	1,827,180
Expected deliveries	3.7%	1,695,019
Women of reproductive age (15 – 49 years)	26.5%	12,181,200

UBOS mid-year population projection for 2024

1.6 PROCESS OF COMPILING THE REPORT

The process of compiling the AHSPR was participatory involving all departments and the Technical Working Groups (TWGs) composed of MoH, Development partners, Private Sector, Medical Bureaus and Civil Society Organizations (CSOs) representatives. MoH constituted the secretariat and held retreats for data synthesis and report writing with support from WHO. The final draft was presented to the Senior Management Committee (SMC) and the

Health Policy Advisory Committee (HPAC) for endorsement and approval by MoH Top Management Committee.

The primary data source was the MoH Health Management Information System (HMIS), supplemented by other reports like the Uganda Housing and Population Census Report 2024 and the Malaria Indicator Survey.

Other quantitative and qualitative data sources.

CHAPTER

2

OVERALL SECTOR PERFORMANCE AND PROGRESS

*Hon. Dr. Jane Ruth Aceng Otero
Minister of Health officiates at
the ground breaking ceremony
of the Lira blood bank*

Chapter two provides an overview of the health sector's performance for FY 2024/25 covering analysis of the following:

2.1 PERFORMANCE AGAINST THE NDP III KEY RESULT AREAS (KRAS)

The health sector contributed directly to 6 KRAs under the NDP III. The assessment, as summarized in Table 2, was based on 30 indicators, of which

the sector achieved targets for 16 (53.3%), made some progress in 1 (3.4%) and did not achieve 13 (43.3%).

Table 2: Summary of Performance against the NDP III key result areas in FY 2024/25

No.	Key Result Area	Achieved	Progress	Not Achieved	Indicators Not Assessed
1	Improved Skills Mix	2 (100%)	-	-	-
2	Reduced morbidity and mortality of the population	7 (50%)	-	7(50%)	1
3	Improvement in the social determinants of health and safety	5 (62.5%)	-	3 (37.5%)	-
4	Reduced fertility and dependence ratio	2 (66.7%)	1 (33.3%)	-	-
5	Universal Health Coverage	-	-	3 (100%)	-
6	All key forms of inequalities reduced	-	-	1 (100%)	-
2024/25	Score (n = 30)	16 (51.6%)	1 (3.2%)	14(45.2%)	1
2023/24	Score (n = 29)	14 (48.3%)	8 (27.6%)	7 (24.1%)	3
2022/23	Score (n = 31)	15 (48.3%)	6 (19.4%)	10 (32.3%)	1
2021/22	% score (n = 24)	12 (50%)	1 (4.2%)	11 (45.8%)	9
2020/21	% score (n = 24)	14 (58.3%)	4 (16.7%)	6 (25%)	8

The 2 indicators which were not assessed were due to data unavailability. These include annual Cardiovascular incident cases, and Hepatitis B incidence per 100,000 population. The detailed performance for each indicator per KRA is shown in Table 7.

KRA 1: Improved Skills Mix

There was an increase in the available health workers per population evidenced by an increase from 9,388 to 10,433 doctors, and from 119,132 to 133,542 nurses and midwives registered with the respective Health Professional Councils. The annual target of number of health workers (doctors, midwives, nurses) per 10,000 population was met (target: 25, Actual: 31.3). However, we cannot determine the distribution of these health workers across the country. Staffing level in public health facilities was 34% based on the new human resource staffing norms.

KRA 2: Reduce Morbidity and Mortality of the Population

The sector achieved only 54% (7/13) of the assessed targets under this KRA including reducing the number of new HIV infections from 1.23/1000 to 0.79/1,000 population against a target of 2.3/1,000; Annual reported cancer cases through the routine health information system reduced from 34,008 below the target of 35,000; based on the 2022 UDHS the maternal mortality ratio was 189/100,000 while the 2024 census reported 207/100,000 against the target of 211/100,000.

According to the Global Health Statistics report, the mortality rate attributed to WASH has reduced by 40% from 54/100,000 in 2019/20 to 28.1/100,000 in 2025. The proportion of mortality due to communicable diseases (Malaria, AIDS and TB) has also progressively reduced to 16% in FY2024/25 compared to 40.5% in FY 2023/24 below the planned target of 30% for FY 2023/24.

However, under five illness attributed to diarrheal diseases increased from 7.6% in FY 2023/24 to 8.1% in FY2024/25. TB cases increased due to intensified case finding and community vigilance.

Through the target we, not met the Malaria incidence decreased from 280/1000 in FY 2023/24 to 260/1000 FY 2024/25 due to malaria prevention interventions such as IRS in West Nile and Bukedi regions, and seasonal malaria chemoprophylaxis in Karamoja sub-region.

KRA 3: Improvement in the Social Determinants of Health and Safety

During the period under review, 62.5% (5/8) of the targets for this KRA were achieved. Institutional mortality attributed to injuries reduced to 2.1% in FY2024/25 from 6.6% in FY2023/24. Stunting and wasting for under 5 targets were not met. Prevalence of obesity also remain high above the target for both women and men.

KRA 4: Reduced Fertility and Dependence Rate

The sector achieved targets for 66.7% (2/3) of the indicators under KRA4 and made some progress in 33.3% (1/3). The Total Fertility Rate (TFR) has declined from 5.2 (UDHS, 2022) to 4.5 (UBOS, Census Report 2024) achieving the NDP III target of 4.5 by 2024/25. The estimated number of total women using a modern method of contraception has grown to 4,290,000 users from 4,208,000 in the previous year.

The unmet need for Family planning reduced to 19.9% in FY2024/25 from 20.5% in 2023/24 against a target of 10%. The Unmet Need for Married Women continued to increase from 22% in 2023/24 to 27% in 2024/25. In FY 2024/25, the health sector recorded a decrease in Couple Years of Protection, declining to 4,096,513 from 4,403,935 in the previous year as shown in Figure 1.

Figure 1: Trends for Couple Years of Protection (CYP)

Figure 2 shows the family planning methods used in Uganda with most women using Injectable SC

(39.2%), followed by Implants (25.2%), Injectable 1m (22.1%) and others.

Figure 2: FP Method Mix

KRA 5: Universal Health Coverage

Readiness capacity of health facilities to provide general services. The Health Facility Quality of Care Program (HFQAP) provides regular information on quality of care and the general functionality of both public and Private-Not-For-Profit (PNFP) health facilities and use it for Continuous Quality Improvement (CQI).

There was an improvement in the quality-of-service delivery (overall performance) of 11.8% between FY 2024/25 and 2020/21. However, a slight decline of 3% was observed between FY 2021/22 and 2022/23. Generally, there was progressive improvement across all the modules; as shown in Table 3. Leadership and Governance scores highest (76.5%) while diagnostic services were the lowest (52.6%).

Table 3: Trends in the HFQAP Modular Scores

Modules	2020/21	2021/22	2022/23	2023/24	2024/25
Leadership & Governance	59.8	70.2	65.2	73.3	76.5
Human Resources	48	58.4	52.5	59.9	62.4
Health Financing	56.3	64	62.6	65.7	69.1
Health information	53.3	64	60.1	65.9	68.5
Medicines, vaccines management and procurement	56.9	65.3	60	65.7	69.9
Tracer medicines, vaccines, and health supplies	44.3	48.7	43.7	52.7	57

Overall Score	55.4	63.3	60.3	63.8	67.2

Routine Client Satisfaction Feedback Initiative (ROSAFI)

The Ministry of Health has a routine client feedback platform. It enables the Clients/ Patients to routinely provide feedback on their experience during service delivery. The system is accessed through the scanning of a QR-code. MoH, Hospitals, Local governments and Health Facilities then respond to the client's submissions by targeting interventions to ensure improved quality and safety of services. Figure 3 shows the levels of satisfaction with the system.

Client Satisfaction

The leading causes of dissatisfaction were inadequate medicines and supplies availability, overall timeliness of service provision (long waiting time), inappropriate privacy and confidentiality, high cost of services (where services were formally paid for) and not all services were available during the client's visit with inadequate medicines topping the list of the causes of client dissatisfaction (21%) and general service provision being the lowest (11%).

Figure 3: Main Causes of Client Dissatisfaction

Satisfaction by Region

The overall Client Satisfaction Rate (CSR) nationally was 63%, which was below the

national target of 80%. Ankole had the highest CSR at 77% followed by Kigezi at 74% while Acholi had the lowest at 39%.

Table 4: Client Satisfaction rate by region

Region	Client Satisfaction Rate (%)	% of Facilities Implementing
Acholi	39%	30%
Ankole	77%	51%
Bugisu	61%	57%
Bukedi	58%	51%
Bunyoro	62%	62%
Busoga	59%	39%
Kampala	51%	12%
Karamoja	69%	73%
Kigezi	74%	43%
Lango	66%	62%
North Buganda	62%	34%
South Buganda	58%	26%
Teso	53%	61%
Tooro	63%	44%
West Nile	53%	20%
<i>National</i>	63%	33%

Satisfaction by level of care

The RoSAFI initiative has been implemented by all national and regional referral hospitals. This initiative has been rolled out to lower facilities

as well. So far, Table 5, reveals that clients at lower-level facilities reported higher levels of satisfaction (68% in HC IIs and 69% in IIIs) with the services provided compared to higher level facilities (51% in NRH and 50% in RRHs).

Table 5: Client Satisfaction rate by level of care

Level of Care	Client Satisfaction Rate (%)	% of Facilities Implementing RoSAFI
Health Centre II	68%	27%
Health Centre III	69%	6%
Health Centre IV	59%	72%
General Hospitals	64%	63%
National Referral Hospitals (NRHs)	51%	100%
Regional Referral Hospitals (RRHs)	50%	100%

Satisfaction by Ownership

Clients receiving services from private health facilities reported higher satisfaction of 81% with the services provided compared to 61% with

Government facilities. However, coverage of the client feedback system in private health facilities is still very low due to lack of an instrument to enforce implementation in the private sector.

Table 6: Client Satisfaction rate by facility ownership

Ownership	Client Satisfaction Rate (%)	% of Facilities Implementing
Government	61%	51%
Private health providers	81%	6%
Private Not for Profit	81%	37%

KRA 6: All Key Forms of Inequalities Reduced

There has been no movement on this indicator since the previous year. Therefore, the

performance of KRA 6 is based on the most current Global Monitoring report for UHC 2023 (WHO & WB) gives Uganda a UHC index of 49%.

PERFORMANCE AGAINST THE 32 KEY RESULT AREAS

Performance against the 32 key result areas detailed in Table 7.

Table 7: Performance against the 32 key result areas showing trends for the last 4 FYs

KRA	Description	Baseline		Performance			2024/25		Remarks	
		2019/20	2020/21	2021/22	2022/23	2023/24	Target	Performance		
KRA 1	Improved Skills Mix									
	1. Number of health workers (doctors, midwives, nurses) per 10,000 population	18	19	22.5	25.8	26.5	26.5	25	31.3	10,433 doctors, 133,542 nurses & midwives registered against a population of 45,955,046.
	2. Number of physicians per 10,000 population	1.0	1.2	1.8	2	2.1	2.1	2.3	2.3	(10,433/45,955,046) More physicians have been trained and registered.
KRA 2	Reduced Morbidity and Mortality of the population									
	Morbidity									
	3. Number of new HIV infections per 1,000 susceptible population	1.3	1.72	1.3	1.21	1.23	1.23	2.00	0.79	Achieved Source: Spectrum estimates-2024 for All ages years
	4. Tuberculosis incidence per 100,000 population	234	192	199	199	198	198	77	198	The reported TB incidence is because of intensified case findings, including identification of previously missed cases, alongside enhanced community outreach, awareness, screening, and testing efforts resulting from targeted program interventions.
	5. Malaria incidence per 1,000 population	293	302	317	375	298	298	147	261	Although the target was not met, there was a reduction in malaria incidence in FY 2024/2025 compared to the previous year FY 2023/24. The reduction is mainly attributable to the impact of the 2023 mass ITN campaign and IRS in the targeted districts. Notably, the West Nile and Bukedi regions, which received both IRS and LLINs in 2023, had the highest reduction in malaria cases in 2024.

KRA	Description	Baseline		Performance				2024/25		Remarks
		2019/20	2020/21	2021/22	2022/23	2023/24	Target	Performance	2024/25	
	6. Hepatitis B incidence per 100,000 population	60		No data	26.5	33.4	No data	70	65	Uganda Hepatitis B prevalence stands at 4.1%
	7. Annual Cancer Incident Cases	80,000		No data	No data	No data	35,968	35,000	34,008	Uganda Cancer Statistics –Based on Globocan Age-standardized cancer incidence data 2022, published in 2024
	8. Annual Cardiovascular Incident cases	NA		No data	No data	2,539	No data	3,500	No data	No reliable data source. Data source in HMIS was not capturing this information. However, this has been modified to include this data starting FY 2025/26.
	9. Incidence of Road accidents per 100,000 population	2,348		No data	338	341	357	1,200	341	AHSR of previous years shows incidence rate of road traffic injuries going up with a reduction seen in 2024/25.
	10. Under 5 illnesses attributed to diarrheal diseases (%)	6.9		7.9	7.7	7.1	7.6	3.0	8.1	The high number of diarrhea cases reported may be attributed to viral diarrhea and fever-related diarrhea as there has been improvement in WASH practices
	Mortality									
	11. Maternal Mortality ratio (per 100,000 live births)	336		No data	No data	189	189	211	189	Achieved target due to targeted investments in increasing access to maternal and child services by upgrading / construction of HC IIIs, RBF for PHC and strengthened MPDSR & action.
	12. Neonatal Mortality Rate (per 1,000 live births)	27		20	No data	22	22	19	22	Largely due to premature births and sepsis
	13. Under Five Mortality Rate (per 1,000 live births)	64		46	No data	52	52	30	52	Major challenge is still high neonatal mortality
	14. Hypertension rate (%)	24.3					23.5	2.5	23.5	Increase recorded due to improved data collection through the STEPS survey
	Male					23.4		23.4		
	Female					23.5		23.5		

KRA	Description	Baseline 2019/20 2020/21	Performance				2024/25		Remarks
			2021/22	2022/23	2023/24	Target	Perfor- mance		
15. Diabetes rate (%)	Male	1.8				3.3	2%	2.7%	
	Female			2.6			2.6		
16. Reduce proportion of mortality due to communicable diseases (Malaria, AIDS and TB) from 60 in 2017 to 30 by 2025)	Malaria, AIDS and TB	60	43	53	50.8	40.4	30	16	
	Malaria		7.5	6.5	7	5.7		5	A total of 2,294 malaria deaths were registered at health facilities with Busoga, Bunyoro and North Buganda sub regions reporting the highest number of malaria deaths
	AIDS		39.2	35.8	39.1	26.0		7	According to Spectrum, 20,000 PLHIV are estimated to have died by the end of 2024. In the Reporting period July 2024 to June 202 (DHIS2) 2,518 PLHIV on ART within clinical contact died accounting to 6.5% (32,518/39,029
	TB		9.5	5.2	18	8.7		4	Mortality due to TB has consistently decreased and is now below the national target of 5%, owing to the positive impact of ongoing efforts in patient monitoring and the integration of TB activities within community-based interventions i.e early case finding, the implementation of Digital Adherence Technologies, Mortality audits for Hospitals reporting High TB deaths, and the Treatment Success Rate Package to improve access to TB treatment.
17. Mortality rate is attributed to unsafe water, unsafe sanitation, and lack of hygiene (per 100,000)		54	No data	No data	28.1	28.1	43	28.1	Based on World Health Statistics Report 2024

Overall	3,488	52%	982	15%	2,192	33%	6,663	100.0%

Table 8 shows a total of 6,663 health facilities in the National Master Health Facility register by the end of FY 2024/25 with 52% of them being owned by government, 15% by Private Not-For Profit (PNFP), and 33% by Private Health Providers (PHPs).

2.2.1 Outpatients Department (OPD) Attendances

There was an increase in the total OPD attendances (new and revisits) by 6.9%

to 48,818,343 attendances compared to 45,427,970 in FY 2023/24, giving a per capita OPD attendance of 1.1 compared to 0.96 in FY 2023/24 as shown in Table 9. OPD attendances for children under 5 years accounted for 17.9% (Males 8.7% & Females 9.2%) of all attendances whereas females above 5 years accounted for 53.0% of all the OPD attendances. Overall, there was an 11.5% increase in the number of under 5 OPD attendances from 7,747,714 in 2023/24 to 8,751,665 in 2024/25. Patients of 5 years and above accounted for 82.1% of all the OPD visits.

As indicated in Table 11, 66% of patients seek services in HC III and HC II, which are in line with the national referral system. There was a slight

reduction in the patients' seeking services from HC IIs which is largely due to the continuous upgrading of HC IIs to HC IIIs.

2.2.2 Common Conditions in OPD Attendances

Table 12: Top 20 Disease Conditions among OPD attendances

S/N	Condition	Under 5 Yrs			Above 5 Yrs			Overall Total	Percent

*All other disease conditions constitute 11.3%

Malaria remains the leading condition accounting for 26.1% of all OPD conditions. This is a reduction from 29.4% in FY 2023/24.

Cough or cold (No Pneumonia) follows at 25.2%, Urinary tract infection at 6.7% and Gastro-intestinal disorders at 6.0% as shown in Table 12.

Table 13 shows that cough or cold (No pneumonia) increased by 27% between FY 2023/24 and FY 2024/25. Urinary tract infections increased by 0.9% in the same period. A 14.1% reduction in the number of malaria cases was observed in FY 2024/25 as compared to the previous FY 2023/24 while skin diseases reduced by 41% in the same period.

2.2.2.1 Malaria

Through the Malaria reduction and elimination strategic plan, the country deployed interventions to reduce the burden of malaria and progress has been observed. In FY

2024/25, the number of confirmed malaria cases was 11,997,339 (including cases from the community) with an incidence of 261 cases per 1,000 persons contributing 22 percent to OPD attendance. Malaria test positivity was 35%.

Table 14: Malaria Incidence by Region in FY 2024/25

Region	Suspected Malaria (fever)	Total Tests (B/s & RDT)	Test Positivity Rate	Total malaria cases (HF+Com.)	Confirmed malaria cases (HF+Comm)	Malaria incidence (per 1,000 persons)	% OPD attendance due to malaria

Kampala	674,943	1,027,710	12%	139,006	139,006	96	3%
Kigezi	476,787	501,946	13%	74,394	70,856	40	3%
National	25,372,508	26,480,453	36%	12,498,075	11,997,339	261	22%

The country experienced a reduction in malaria incidence in FY 2024/2025 compared to the preceding year. It reduced from 280 per 1,000 persons for the FY 2023/24 to 261 cases in FY 2024/25. This reduction was primarily due to the reduction in the incidence of malaria in West Nile where it reduced from 468 to 255 per 1,000 persons attributed to indoor residual spraying in the region. Details in Table 14.

Figure 4 and Figure 5 reveal that on average, for FY 2024/25, malaria incidence was 261 cases per 1,000 persons. It was highest in Acholi region (724) followed by Teso (514), Lango (488) and Busoga (381). Regions that recorded the lowest malaria incidence were Kigezi (40) and Kampala (96).

Figure 4: Regional Variation in the Incidence of Malaria in the Last Two Financial Years

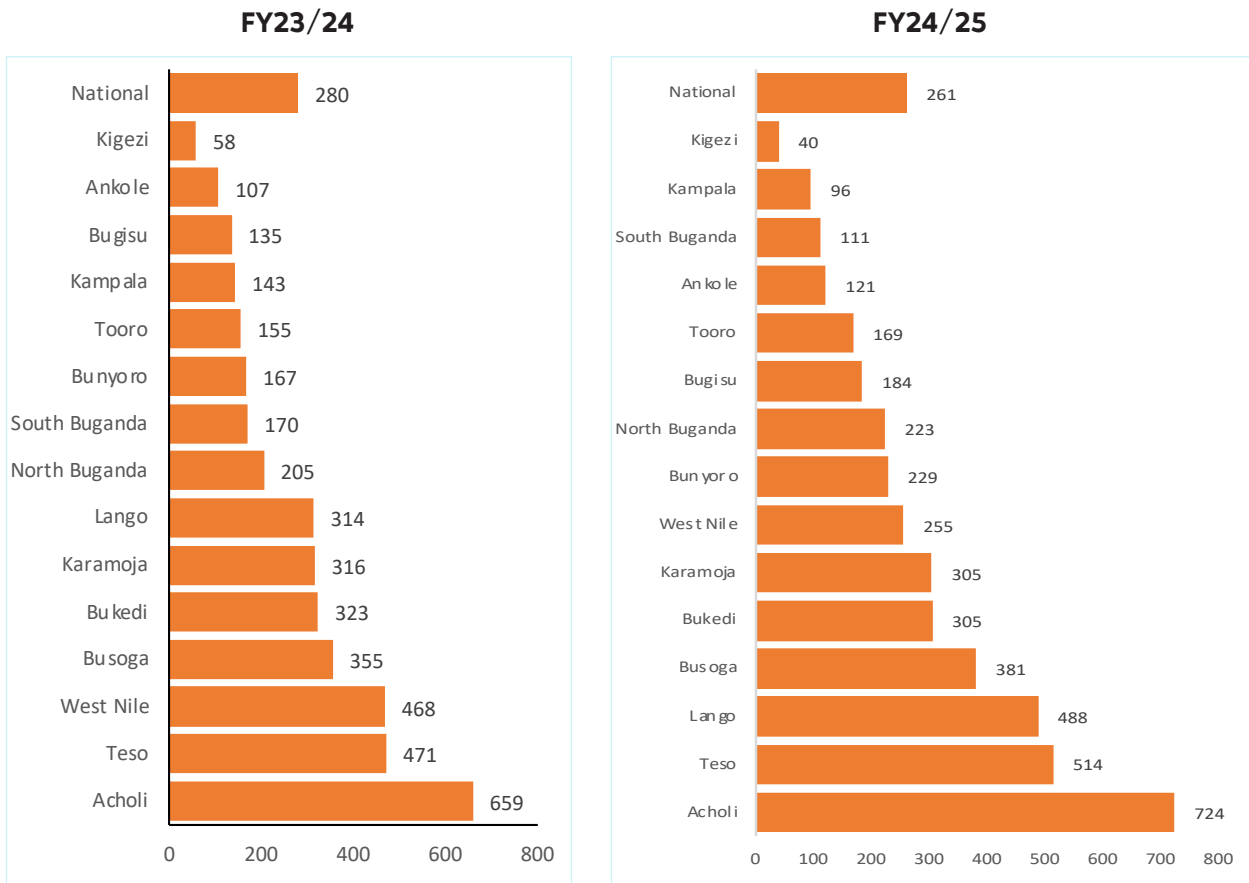

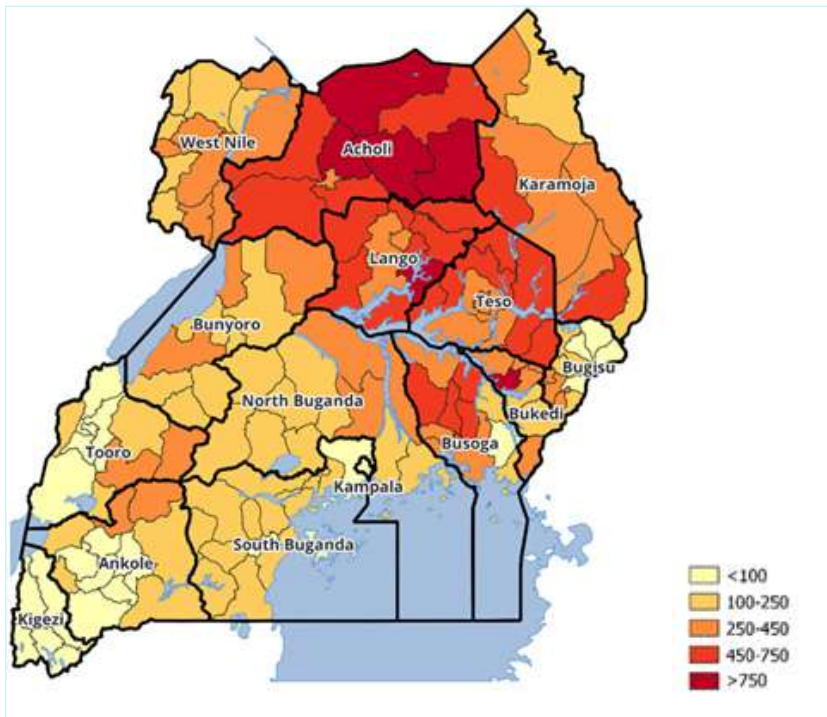

Figure 5: Incidence of Malaria by LG in FY2024/25

2.2.3 Injuries among OPD Attendances

Table 15 shows that during FY 2024/25, a total of 644,411 OPD attendances due to all types of injuries were reported accounting 23.6% (199,242 cases) decrease compared to 843,653 in FY 2023/24. Trauma due to other causes accounted for 57.6% of all injuries, followed road

traffic injuries (RTIs) at 17.1%, and injuries due to Gender based violence at 11%. Among RTIs, motorcycles were the leading cause, contributing 56%, followed by other RTIs at 21.4%, motor vehicles at 17.2% and bicycles at 5.4. Injuries due to Gender-Based Violence (GBV) increased by 10% from 65,269 in FY 2022/23 to 71,841 cases in FY 2024/25 across all age groups.

Table 15: Causes of Injuries among OPD attendances in FY 2024/25

Type of Injury	Under 5 years		Total < 5 years	Above 5 years		Total > 5 years	Overall Total	%
	Male	Female		Male	Female			
Road Traffic Injuries – Motor Vehicle	625	542	1,167	14,987	10,539	25,526	26,693	4.1%

Burn injuries	4,830	4,587	9,417	6,684	8,018	14,702	24,119	3.7%
Jaw injuries	212	118	330	3,126	2,690	5,816	6,146	1.0%
Other sites	9,875	10,645	20,520	167,941	194,512	362,453	382,973	59.4%
Total	21,790	21,440	43,230	295,394	305,787	601,181	644,411	100.0%

The number of road traffic injuries (RTIs) reported at health facilities decreased by 4.7% from 164,207 cases in FY 2023/24 to 156,449 cases in FY 2024/25. This corresponds to an incidence of 340.6 per 100,000 population in FY 2024/25 compared to 357 per 100,000 population in FY 2023/24.

The community ambulance response accounted for 13.4% of all cases, of which 12.8% (1,521 cases) were trauma related to road traffic incidents, while 71 cases (0.6%) were attributed to mass casualty incidents.

Details on Figure 6, Figure 7 and Table 17.

Figure 6: Trend in RTIS seen at Health Facilities

RTIs managed at Health Facilities are more common in the urbanized areas of Kampala, South-Central and Busoga regions.

2.2.4 Status of Emergency Medical Services in Uganda

There were 855.6 reported emergency cases per 100,000 population during FY2024/25 as shown in Table 18. Kampala (2,590.7 cases per 100,000 pop) registering the highest rate, followed by Busoga, Acholi, North-Central, and West Nile. Bunyoro recorded the lowest. On average, 59.9% of cases received care at the

scene, while 21.4% were transported to health facilities by ambulance where 57.4% were female and 42.6% were male. Of those transported, 75% were inter-facility transfers and 25% community evacuations. Among those who arrived at emergency units, 82.7% received care within one hour, and the case fatality rate stood at 1.1%. The national Ambulance service also responded during Mpox and Ebola outbreaks, evacuating 2168 and 453 cases respectively.

Table 18: Trauma Emergency Medical Services in the Country during FY 2024/25

Inter-health facility transfers accounted for 87% of all ambulance services in the country. The National Average for patients who arrive at the facility using Ambulance was 21.4%, this represents only trauma transfers. Ambulance evacuations increased by 48.5% from 28,347 in FY 2023/24 to 42,084. West Nile had the highest proportion of emergency patients evacuated by

ambulance at 48.3% followed by Karamoja (44%), Teso (39%), and Tooro (31.1%). On the other hand, North-Buganda reported the lowest utilization of Ambulance services at 10.5%. However, 96% of the transfers involved critically ill patients, indicating appropriate and efficient utilization of ambulance services.

Figure 8: Regional Distribution in the number of cases benefiting from Post-Crash Response Rescues

As detailed in Figure 8, West Nile reported the highest number of post-crash responses by ambulance, followed by South Buganda, North

Buganda, and Kampala. On the Other hand, Ankole had the lowest number of reported post-crash response by ambulance.

West Nile	1888	13.2%	215	1.5%	139	1.0%	154	1.1%	2,396	16.8%
Total	9,308	65.1%	2,565	17.9%	1,272	8.9%	1,156	8.1%	14,301	100.0%

During FY 2024/25, a total of 14,301 non-trauma cases were evacuated by ambulances across the country. Maternal emergencies accounted for the majority of these cases, representing 65.1% (9,308), followed by medical cases at 17.9% (2,565), paediatric cases at 8.9% (1,272), and surgical emergencies at 8.1% (1,156).

Notably, pregnant women and paediatric patients together constituted 74% (10,580) of all non-trauma evacuations, while 91% (6,821) of the reported cases were classified as critically ill emergencies requiring urgent medical attention. Details in Figure 10, Figure 11 and Table 19.

Figure 10: Triage Category for Non-Trauma Emergency Cases transferred by Ambulance

Note that Green refers to Stable & Non life-threatening, Yellow refers to Delayed (Serious but Stable) and Red refers to Immediate (Critical and Life-threatening).

Figure 11: Regional Variation for Non-Trauma Emergency Cases Transferred

During FY 2024/25, the West Nile region reported the highest number of non-trauma cases evacuated by ambulance, totaling 2,396 cases, followed by Busoga (1,829), Kampala (1,526), and South Buganda (1,394).

In contrast, the Ankole region recorded the lowest number of non-trauma emergency evacuations, with only 190 cases reported during the same period.

2.2.5 Mental Health Conditions among OPD Attendance

In the past 4 years as highlighted by figure 12, the country has registered marked increase in mental health OPD attendances. Between FY2021/22 and FY2024/25, mental health OPD attendances rose markedly from 455,153 to 666,239, reflecting a 46% increase over the baseline year. Annual growth was steady, with a 14% rise in FY2022/23 and further acceleration to 35% in FY2023/24, before reaching the current 46% in FY2024/25.

Figure 12: Trends in Mental Health OPD Attendances: FY21/22 – FY24/25

In FY2024/25, mental health conditions accounted for 1.5% of all OPD attendances. Most outpatient visits for mental health diagnoses occur among adults aged 20 years and above,

accounting for over 70% of cases. Female adults accounted for 42% of all mental health patients attending OPD while male adults accounted for 31%. Details are contained in Table 20.

Table 21 reveals that OPD attendances for mental health conditions in Uganda have shown a steady and significant increase, rising from 455,153 cases in 2021/22 to 666,239 cases in 2024/25. The upward trend reflects a growing recognition of mental health needs and possibly increased service utilization. Epilepsy remains the leading mental health diagnosis in Uganda's outpatient services, representing 44.9% of visits

in FY2024/25, though its share has steadily declined from 55.4% in FY2021/22. In contrast, unipolar depressive disorder has surged, rising from 4.0% to 15.0% over the same period. Bipolar disorder (10.8%) and anxiety disorders (8.0%) continue to contribute significantly, while schizophrenia and gender-based-violence-related anxiety show persistent increases.

West Nile, Busoga, and North Buganda reported the highest burden of OPD attendance due to epilepsy. Relatively low levels of Epilepsy cases

attending OPD were reported for Karamoja region (Figure 13 and figure 14).

Figure 13: Regional Variations for OPD Attendance due to Epilepsy for fy2023/24

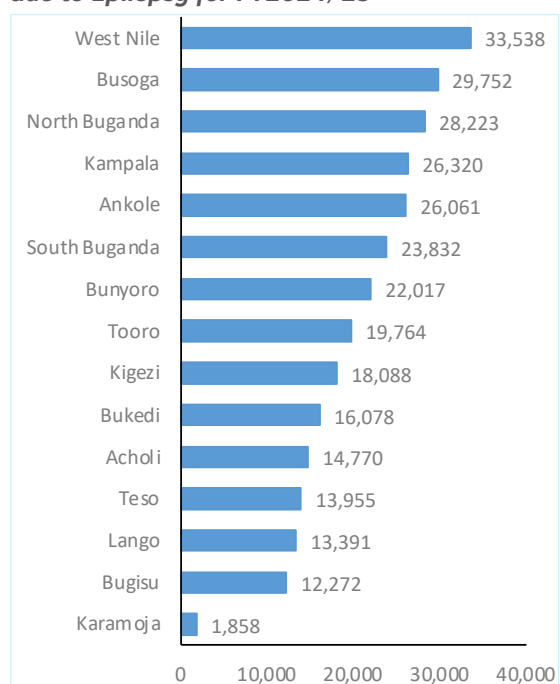

Figure 14: Regional Variations for OPD attendance due to Epilepsy for FY2024/25

2.2.6 Inpatient Admissions

Inpatient admissions increased by 10.4% from 3,579,106 in FY2023/24 to 3,952,629 in FY2024/25 as detailed in Figure 15.

Figure 15: Trends in Inpatient Admissions

Table 22 shows admissions for children under 5 years accounted for 39.5% of all admissions. Utilization among males under the age of 5 years accounted for approximately 20.5% of total admission compared to females under-5

years who accounted for 19% of total admission. Admissions for females above 5 years accounted for 35.6% of all admissions compared to 24.8% among males above 5 years.

In FY2024/25 as shown in Table 23, HC IIs accounted for the largest share of inpatient admissions at 32.8%, followed by HC IVs (24.8%) and General Hospitals (24.5%).

Although tertiary level facilities like NRH and RRHs contributed a smaller overall proportion

(4.3% and 11% respectively), they carried the heaviest caseload, averaging 58 and 70 new admissions per day, far exceeding the 14 daily admissions at general hospitals. Clinics and HC IIs have minimal inpatient admissions, less than 2% combined.

The in-patient admission rate has steadily increased from 68 per 1,000 population in FY2021/22 to 86 per 1,000 in FY2024/25. Busoga region at 163 per 1,000 and South Buganda (119 per 1,000) registered the highest

rates in FY 2024/25. Kampala and Acholi consistently exceeded 120 per 1,000 for the past three years, while North Buganda and Bunyoro remain below 50 per 1,000,

Table 27 reveals that Regional Referral Hospitals and General hospitals account for 60.5% of all facility deaths respectively.

The country recorded a 7.2% increase in the number of deaths as compared to previous FY 2023/24.

Table 28: Leading Causes of In-Patient Death in FY 2024/25

S/N	Condition	Under 5 Yrs			Above 5 Yrs			Overall Total	Percent
		Male	Female	Total	Male	Female	Total		
1	Neonatal conditions (All)	3,646	2,889	6,535	-	-	-	6,535	14.9

20	Liver Cirrhosis	25	3	28	265	122	387	415	0.9

**All other disease conditions account for 34.9% of the deaths at health facilities*

A 9.7% reduction in the number of deaths was recorded in the FY 2024/25 from 18,286 in FY 2023/24 to 16,507 in FY 2024/25. Overall, the leading causes of deaths remain the same. If aggregated, motorcycle accidents, motor vehicle accidents and other injuries could be the next leading causes of death after malaria. On the other hand, Neonatal deaths increased from 4,208 in FY 2023/24 to 4,447 in FY 2024/25. This is a 5.7% increment in the number of neonatal deaths. Death due to hypertension is

on the rise accounting for 4.5% of all in-patient death compared to 2.8% in the previous year. Detailed statistics in Table 28.

Table 29 shows that neonatal conditions are the leading causes of deaths in health facilities (14.9%) This an increment from 9.4% from previous FY 2023/24. More than 32% of neonatal deaths are premature babies as a condition that requires management. Injuries from all causes accounted for 4.8% of the deaths after malaria at 5%.

Table 29: Deaths due to Neonatal Conditions FY 2024/25

Condition	Male 0-4Yrs	Female 0-4Yrs	Total < 5Yrs
Neonatal Sepsis 0-7days	620	526	1,146
Neonatal Sepsis 8-28days	166	153	319
Neonatal Jaundice	150	99	249
Neonatal Pneumonia	142	76	218
Neonatal Meningitis	36	30	66
Neonatal tetanus	5	5	10
Premature baby (as condition that requires mgt)	1166	922	2,088
Other Neonatal Conditions	1361	1078	2,439

Out of all patients admitted due to malaria, 2,196 (4.8 per 100,000 persons) died. North Buganda (313), Busoga (241) and Bunyoro (239) sub

regions reporting the highest number of malaria deaths as shown in Table 30.

Table 30: Malaria Deaths by Region in FY 2024/25

Region	Malaria deaths	Malaria as % of all-cause deaths	Malaria case fatality rate	Malaria mortality rate (per 100000)
Acholi	168	5.3%	0.3%	8.2
Ankole	91	4.2%	0.4%	2.5
Bugisu	46	1.5%	0.1%	2.1
Bukedi	82	5.7%	0.1%	3.5

Total	2,369	100%	3,072	100%	2,691	100%

2.3 PERFORMANCE AGAINST THE KEY HEALTH OUTCOME INDICATORS

During the year under review 27 out of the 32 key outcome indicators were assessed and 5 were not assessed due to lack of data as shown in Table 33. Out of the 27, the sector achieved 25.9% (7/27) compared to 40.8% (11/27) in FY 2023/24; made some progress though did not achieve the annual target for 40.8% (11/27) compared to 25.9% (7/27) the previous year; minimal, no progress or decline in 33.3% (9/27) same as FY 2022/23. This shows some decline in performance over the last year.

Slow progress or non-achievement of some targets was due to low coverage of HIV positive pregnant women initiated on ARVs for EMTCT (91%), HIV exposed infants with first DNA/PCR

test within 2 months (83%), ART Retention rate at 12 months (80%) which declined compared to the previous year due to partner funding shortfalls resulting from the work stop orders that affected access of HIV/Aids commodities and supplies. High numbers of leprosy patients in West Nile & Tooro region due influx of refugees from Congo and South Sudan, stock out of HepB vaccines upon roll out of HepB birth dose, limited awareness about cancer screening services as well as poorly equipped facilities. Under maternal health services there is late ANC attendance affecting uptake of IPTp, and inadequate supplies for anemia screening during prenatal visits.

Table 32: Summary of Performance against the key Health Outcome Indicators

FY	Achieved		Progress		Not Achieved		Not Assessed
	Number	%	Number	%	Number	%	Number
2024/25	7	25.9%	11	40.8%	9	33.3%	5
2023/24	11	40.8%	7	25.9%	9	33.3%	5
2022/23	11	42%	1	4%	14	54%	6
2021/22	17	63%	6	22%	4	15%	5
2020/21	14	50%	6	21%	8	29%	4

Table 33: Performance against the Key Outcome Indicators

No.	Indicator	Baseline 2019/20	Performance				Target 2024/25	Performance 2024/25	Remarks
			2020/21	2021/22	2022/23	2023/24			
1.	DPT ₃ HibHeb ₃ coverage	87%	87%	91%	87%	95%	100%	97%	Equity challenges hindering access to immunization services. The program has embarked on using CSOs to improve defaulter tracking
2.	Measles immunization coverage under 1 year (MR 1)	88%	86%	91%	88%	94%	95%	97%	Big Catch up supported reaching under vaccinated children for Measles Rubella and updated their vaccination status
3.	Use of insecticide-treated bed nets for malaria prevention	68%	No data	No data	No data	62%	85%	76.6%	The proportion of the population that slept under an ITN the night before the survey increased from 62% (UDHS 202) to 77% (UMIS 2024).
4.	% of the population with knowledge and practice correct malaria prevention, control and management measures.	No data	No data	No data	No data	No data	No data	No data	Source is Malaria Indicator Survey which is yet to be released.
5.	HIV positive pregnant women initiated on ARVs for EMTCT	92%	96%	98%	94%	95%	95	91	The program achieved 91% of the targeted 95% for HIV positive women identified in ANC, Labour and delivery entry points. This reduction in performance from 92% to 91% was majorly due to stop work orders that affected the follow-up and linkage mechanisms both at community and facility level
6.	HIV exposed infants with first DNA/PCR test within 2 months	56%	71%	88%	91%	91%	95%	83%	Of the estimated 75,998 mothers needing PMTCT, a total of 63,081 exposed infants received 1st DNA PCR within 2 months, which slightly below the target of 85% and a decline of 8% from the previous performance. This drop is majorly due to reductions in client tracking and follow-up mechanisms due to the stop work orders.

No.	Indicator	Baseline 2019/20	Performance				Target 2024/25	Performance 2024/25	Remarks
			2020/21	2021/22	2022/23	2023/24			
7.	ART Coverage	86%	91%	95%	98%	97%	91%	93%	Of the spectrum estimated 1,527,238 PLHIV, a total of 1,417,232 PLHIV were on ART achieving 93%. The low performance was contributed to by children 0 – 9 years at only 51% 920,579 Vs 40,015) and Adolescents 10– 19 years at 65% (55,847 Vs 85,335).
8.	ART Retention rate at 12 months	76%	78%	83%	77%	82%	95%	80%	The overall low performance is due to low linkage, appointments tracking and follow-up mechanisms which were affected by the stop work orders. This low performance against the target is contribution to majorly by low retention rates among children (0–9 years) at only 60%, eMTCT mothers at 83% and adults at 82%.
9.	ART Viral Load Suppression Rate among PLHAs on treatment	89%	93.50%	88%	94%	96%	95	95	The program achieved 95% viral load suppression rate. However, low performance was recorded among children (0–9) years and adolescents (10–19) years at 87% and Male at 94%.
10.	TB Case Notification Rate	152 /100,000	161 /100,000	198 /100,000	212 /100,000	198 /100,000	179	176	The performance is largely attributed to the scale-down of partner-supported activities in some sub regions, which directly impacted case-finding interventions both in communities and health facilities. In response, the program continues to implement the TB CAST+ campaign, including the deployment of mobile TB clinics and community screening with portable X-ray units, to enhance TB screening and case finding across the country.
11.	Leprosy patients presenting to health facilities with Grade 2 disability at the time of diagnosis	No data	12.9%	21.5%	19%	10.5%	5%	17%	Considerable progress has been made toward the 2029/30 target of 5%, indicating that capacity-building for health workers and intensified contact surveillance in high-burden regions such as West Nile are beginning to yield results. Going forward, greater focus will be placed on early detection, strengthening diagnostic skills among health workers, and sustaining community awareness to further reduce late presentation with Grade 2 disability.
12.	Target population fully vaccinated against COVID-19	Na	11%	57%	58%	No data	90	No data	No population survey was undertaken.

No.	Indicator	Baseline 2019/20	Performance					Target 2024/25	Performance 2024/25	Remarks
			2020/21	202122	2022/23	2023/24	2024/25			
13.	Zoonotic disease detected and managed timely	100%	100%	100%	100%	100%	100%	100%	All epidemics were detected and managed timely	
14.	Target districts (51) that achieved elimination of blinding trachoma	No data	90%	90%	96%	96%	100%	96%	58 out of 61 that have achieved elimination of Trachoma	
15.	% of target population vaccinated against Hepatitis B by dose									
	1 st dose	78%	77%	59%	76%	28%	80%	18%	Stockout of Hepatitis vaccine for adults	
	2 nd dose	39.20%	51%	29%	48%	7%	70%	4%		
	3 rd dose	15.60%	30%	23%	24%	3%	60%	1%		
16.	Tobacco non-smoking rate	90.4%	97%	97%	84%	91.7%	95%	91.7%		
	Males	83.2%				85%		85%		
	Females	97.1%				97.6%		97.6%		
17.	Girls immunized against cervical cancer by 10 years	40%	58.6%	56%	74%	75%	90%	97%	The country switched from 2 doses to single dose of HPV during the FY 24/25. During this FY HPV vaccination coverage was 97% (WUENIC) and this is attributed to the Big Catch-Up campaign where school health interventions were strengthened.	
18.	Cervical cancer screening in women aged 30-49 years	9.9%	No data	No data	No data	23%	50%	23%	Last survey was done in 2023, 23%. No new survey done	
19.	Breast cancer screening in women aged 30 - 49 years	7%	11%	No data	No data	No data	50%	No data	Data source in HMIS was not capturing this information. However, this has been modified to include this data starting FY 2025/26.	
20.	Prostate cancer screening in men above 40 years	2%	No data	No data	No data	No data	50%	No data	Data source in HMIS was not capturing this information. However, this has been modified to include this data starting FY 2025/26.	

No.	Indicator	Baseline 2019/20	Performance				Target 2024/25	Performance 2024/25	Remarks
			2020/21	2021/22	2022/23	2023/24			
21.	IPTp3 coverage for pregnant women	30%	50%	57%	54%	54%	90%	65%	The IPTp3 coverage improved but is still below the set target for 2024/25. The performance improved from 40% in 2019/20 to 65.6% (FY 2021/22) but this dropped to 54% in FY 2023/24. In FY2024/25 the performance increased to 65%. with a 11% increase in performance between 2023/24 and 2024/25.This was attributed to improved provider knowledge and skills that was achieved through refresher trainings and provision of SOPs and job aid, QA/QC approaches that targeted all stakeholders like onsite mentorships, CMEs CQIs and stakeholder learning events. Additionally, the SP stock status significantly improved from Q4 (FY 2023/24) to date. However, there is still need to improve early ANC initiation and ANC 4 for now access to IPTp can be improved through the introduction of community IPTp.
22.	Anaemia screening at first prenatal visit	49%	21%	23%	23%	23%	65%	28%	Performance remained below the 65% target, mainly because health facilities at different levels did not consistently have the laboratory supplies required for haemoglobin testing.
23.	ANC 4 th visit coverage	42%	48%	59%	46%	49.1% (1,119,557 / 2,278,100)	56%	56% (1,275,939 / 2,296,752)	Increased by 14.2% achieving the set target
24.	Health facility deliveries	62%	64%	68%	64%	65%	74%	71%	Under reporting especially by private health facilities.
25.	HC IVs providing CeMNOC	51% (103/203)	50% (108/218)	54 (131/241)	52% (132/254)	60% (159/266)	75%	66.4% (190/286)	0.4 percentage increase, mainly due to upgraded HC IVs and their proper alignment in DHIS2. However, 52 HC IVs lack blood transfusion services and 44 did not conduct caesarean sections because of infrastructure and staffing gaps.
26.	Maternal deaths among 100,000 health facility deliveries	92	92	83	90.3	82.7	20	69.1	Reduced by 16.44%

No.	Indicator	Baseline 2019/20	Performance					Target 2024/25	Performance 2024/25	Remarks
			2020/21	202122	2022/23	2023/24	2024/25			
27.	Facility based fresh still births (per 1,000 deliveries)	9	7.7	7	6.4	5.7	4	5.3	Reduced by 7%	
28.	% of Maternal deaths reviewed	72%	76%	89.4%	89%	95%	95%	88%	The decline in review rates was largely attributed to challenges with the availability of reporting tools, as well as capturing limitations on DHIS2	
29.	% of Perinatal deaths reviewed	9.7%	32%	42.2%	43%	61%	60%	56.2%		
30.	Under-five Vitamin A second dose coverage	30%	48.2%	66.3%	72%	47%	80	57%	The decline is due to a 12-year shortage of Vitamin A supplementation, with only a limited number of doses provided by Vitamin Angels and UNICEF, which did not cover the entire country: poor performing Regions including Bunyoro, Bukedi, South Buganda, and Teso	
31.	% of pregnant women receiving ferrous sulphate/folate supplement on first visit.	No data	68%	66%	67%	67%	65.0	71.5%	Increased by 6.72%. Regions of Kampala, South Buganda, and Teso had the lowest performance.	
32.	Young people in school accessing age-appropriate information	No data	No data	No data	No data	No data	98%	No data		

DPT3 Coverage

DPT3 coverage increased from 94% in FY 2024/25 to 102% in the current financial year. 2,070,371 doses were administered in FY 2024/25, up from 1,873,314 doses in FY 2024/25. However, low DPT3 coverage was reported in; Soroti (58%), Moyo (63%), Buliisa (70%), Kalaki (71%), Arua (72%), Nwoya (72%), Buvuma (76%), Kalangala (76), Ntungamo (76) and Butaleja (78%). DPT3 coverage of less than 90% was reported in 25% (37/146) of the LGs.

Figure 16: Map Showing DPT3 Coverage by LGs in FY 24/25

The national DPT dropout rate (DoR) was on 3% (within the WHO recommended acceptable DoR range of 0–10%). High DPT1 to DPT3 dropout rates was observed in Buikwe (10%), Buvuma (10%), Kayunga (10%), Moroto (10%), Amuru (11%), Mpigi (11%), Butebo (13%) and Kisoro (16%) (Figure 16).

DPT1 Coverage and Zero Dose Children at LGs

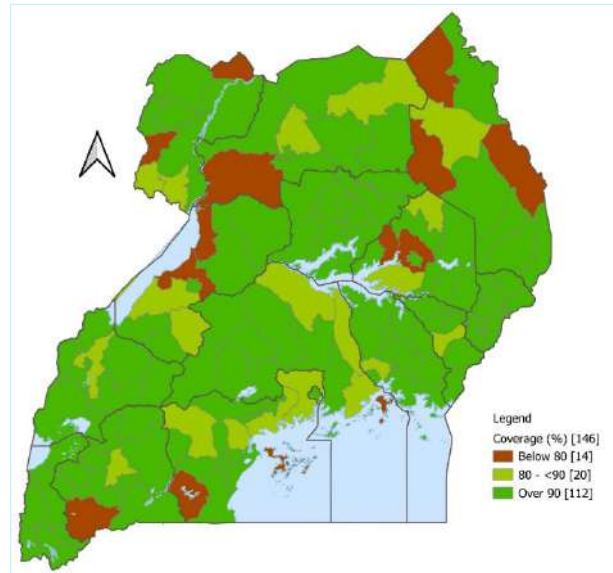

DPT1 coverage increased by 5% in FY 2024/2025, rising from 98% in FY 2023/2024 to 103%. This high coverage is largely attributed to the

intensive catch-up immunization campaign conducted during the period. However, Ntungamo (78%), Kalaki (77%), Buliisa (75%), Kalangala (73%), Nwoya (71%), Moyo (63%), and Soroti (61%) reported low DPT1 coverage.

Measles Rubella (MR) Immunization Coverage Under One Year

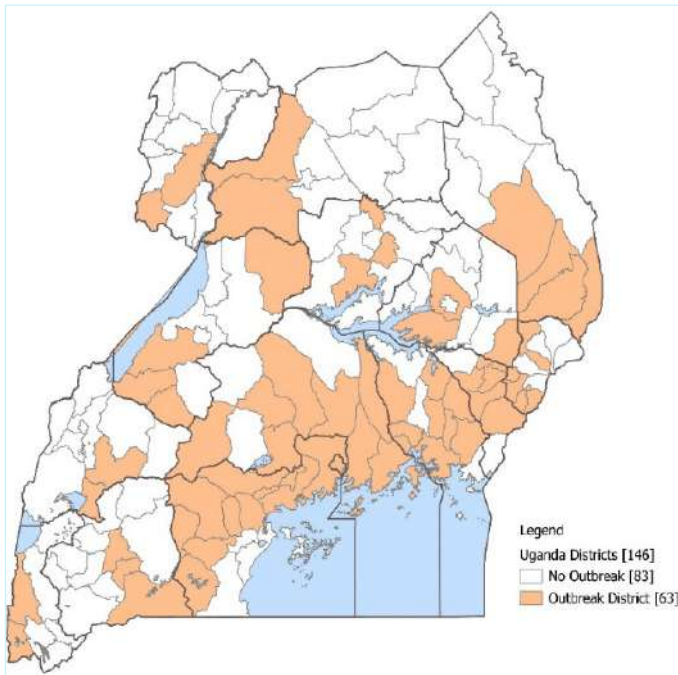

Figure 17 reveals that MR1 coverage increased from 92% in FY2024/25 to 103% in FY2024/25. The high coverage is also attributed to the intensive catch-up vaccination conducted in the period. Low MR1 coverage was observed in Soroti (55%), Moyo (63%), Nwoya (63%), Buliisa (64%), Buvuma (64%), Kalaki (68%), Hoima (71%), Kalangala (72%), Arua (73%), Ntungamo (76%), Rakai (77%), Abim (78%), Karenga (79%) and Moroto (79%).

Figure 17: MR1 Coverage FY 24/25

The Ministry of Health introduced the second year of life dose (MR2) to give children sufficient protection and immunity in the second year of life at 18 months. MR2 coverage was 41% in the last year however because of the big catch-up vaccination efforts, the coverage increased to over 100%.

Figure 18: Measles Outbreak Districts FY 2024/25

Measles Outbreak Districts FY 2024/2025		
Amudat	Kanungu	Mukono
Amuru	Kayunga	Nabilatuk
Budaka	Kibaale	Nakapiripirit
Bugiri	Kiboga	Nakaseke
Bugweri	Kibuku	Namisindwa
Buikwe	Kikuube	Namutumba
Bukedea	Kiryandongo	Napaka
Bukomansimbi	Kisoro	Nwoya
Bulambuli	Kitagwenda	Rakai
Butaleja	Kwania	Sembabule
Butambala	Lira	Serere
Butebo	Luwero	Soroti
Buvuma	Lwengo	Tororo
Gomba	Lyantonde	Wakiso
Iganga	Madi Okollo	Zombo
Isingiro	Manafwa	
Jinja	Mayuge	
Jinja City	Mbale	
Kagadi	Mbale City	
Kaliro	Mbarara	
Kalungu	Mbarara City	
Kampala	Mityana	
Kamuli	Mpigi	
Kamwenge	Mubende	

The country registered 63 measles outbreaks spread in all the regions. The regions of Lango, Tooro, Kigezi, Karamoja and West Nile were the least affected

RED Categorization

To assess access to and utilization of immunization services, a Reach Every District/Reach Every Child (RED/REC) categorization analysis was conducted. Based on this analysis:

1. 117 Local Governments (LGs) were classified under Category 1, indicating good access and good utilization of immunization services.
2. 7 LGs fell into Category 2, with good access but poor utilization.
3. 21 LGs were placed in Category 3, representing poor access but good utilization.
4. Only one district, Buvuma, was classified as Category 4, indicating both poor access and poor utilization of immunization services.

Given its dual challenges, Buvuma District should be prioritized for targeted support.

Likewise, Category 3 districts also require focused interventions. Recommended strategies include large-scale catch-up vaccination campaigns, enhanced supportive supervision and mentorship, and the regular updating and implementation of immunization microplans.

These efforts are essential to reach every child—particularly zero-dose children—and reduce the risk of vaccine-preventable disease outbreaks.

Proportion of Target Population Vaccinated against Hepatitis B by dose:

During the financial year, there was a decline in most of the indicators for Hepatitis B testing and treatment as shown in Table 34.

This decline was attributed to the stockout of screening kits, Hepatitis B treatment regimens, and vaccines.

Table 34: HEPB Testing and Treatment in Adult Population

HEPB Indicator	FY23/24	FY24/25	% change
Number of clients tested for HepB	866,218	795571	-8%
Number of clients tested negative for HepB	770,614	712499	-8%
Number of clients tested positive for HepB	18,643	15401	-17%
Number of clients tested negative for HepB and Vaccinated - 1st Dose (New)	188,721	126227	-33%
Number of clients tested negative for HepB and Vaccinated - 2nd Dose (Revisit)	41,319	27050	-35%
Number of clients tested negative for HepB and Vaccinated - 3rd Dose (Revisit)	15,550	6598	-58%
Number of clients tested positive for HepB and enrolled into care and treatment	6,267	5978	-5%
Number of clients tested positive for HepB and not enrolled into care and treatment	4,776	3578	-25%
Number of Persons assessed for HepB treatment effectiveness (viral load suppression)	1,669	2010	20%
Number of Persons with HepB effective treatment (viral load suppression)	2,530	3447	36%
Number of Pregnant women tested for HepB	409,152	424941	4%
Number of Pregnant women tested positive for HepB	10,035	10008	0%
Number of Pregnant women tested positive for HepB and initiated on HepB treatment	2,597	2125	-18%

Proportion of livebirths vaccinated with Hepatitis B vaccine:

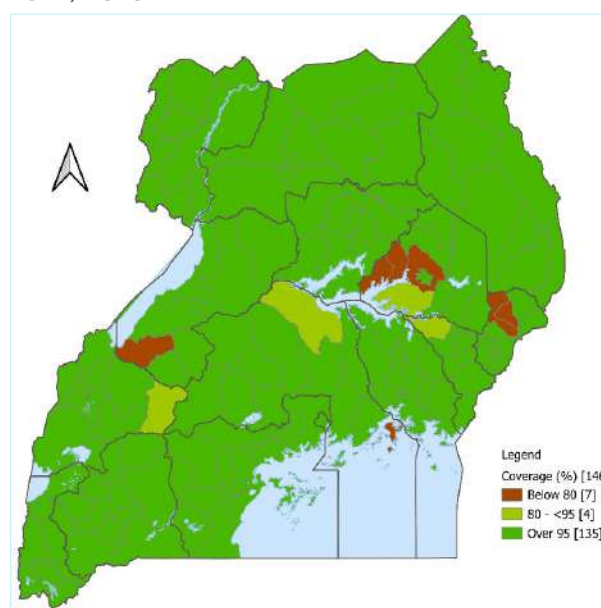

Hepatitis-B Birth dose vaccination coverage increased to 36% from FY 2023/2024 to 47% in FY 2024/2025. During the period, 83 LGs had coverage of less than 50%, 34 LGs had coverage between 50%-69% while 29 LGs had coverage of above 69%. The 10 LGs with the lowest HepB0 coverage include Masaka City (12%), Nakasongola (17%), Mpigi (18%), Sembabule (19%), Luuka (20%), Rakai (22%), Buikwe(23%), Kalaki (24%), Kyenjojo(24%), and Bukomansimbi (24%). Hepatitis B birth dose vaccination coverage has continued to perform poorly since the introduction of HepB birth dose into the routine immunization program in October 2022. The main reason for higher coverage during the year was the catchup immunization in November 2024.

Proportion of girls immunized against cervical cancer by 10 years:

The country switched from 2 doses to single dose of HPV during the FY 24/25. During this FY HPV vaccination coverage was 97% (based

on the WHO UNICEF estimates on National immunisation coverage) above the target of 90% and this is attributed to the support to Big Catch Up where school health interventions were strengthened. Figure 15 shows the HPV Coverage for girls aged 10 years and above in FY2024/25.

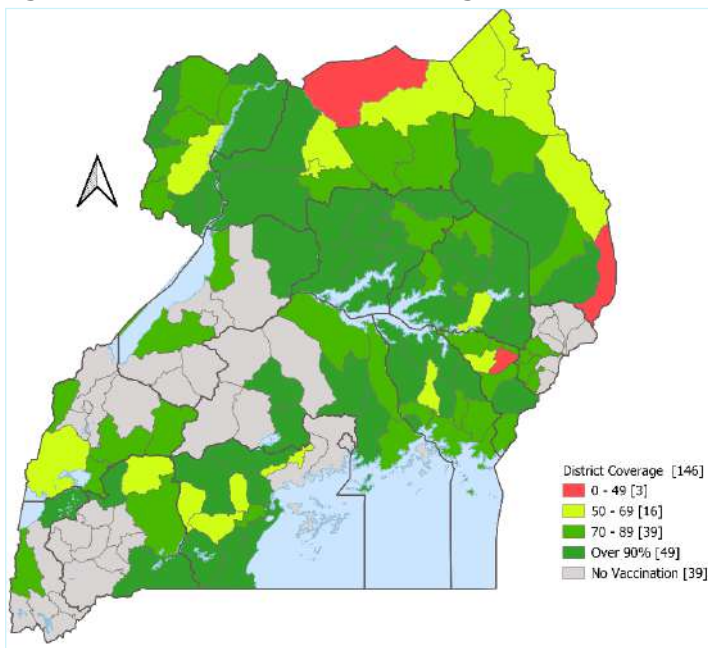

Figure 19: HPV Coverage for Girls aged 10 years FY 2024/2025

Malaria Vaccination was introduced in April 2025 in 107 districts with the highest burden of malaria across all the regions of Uganda targeting children aged between 6 and 11 months. By the end of the FY2024/25, the country had reached 96% of the target population with the first dose of the malaria vaccine.

The second dose malaria vaccine coverage was at 33% while dose 3 coverage was at 9%. Of the districts targeted, 49 had reached 90% of their respective targeted population. Three districts of Amudat, Budaka and Lamwo had achieved less than 50% coverage. Details in Figure 20.

Figure 20: Malaria Vaccination Coverage FY 2024/25

Use of insecticide-treated bed nets for malaria prevention

The proportion of the population with access to an ITN decreased from 99% in 2022 to 81% in 2024. (Figure 17). On the other hand, the proportion of population that slept under ITN increased from 62% in 2022 to 76% in 2024. The gap between ITN access and use decreased between 2022 and 2024.

Figure 21: Trends in ITN Access (One ITN Per Two People) and Use

66.4% of children under age 5 slept under an ITN the night before the survey (Figure x). Similarly, 69.5% of pregnant women aged 15-49 slept under an ITN the night before the survey.

Figure 22: ITN use by Population Group

Source: Malaria Indicator Survey, 2024

The use of an ITN the night before the survey among children under age 5 varies across regions from 57.7% in Tororo to 82.6% in Lango. Similarly, the proportion of pregnant women

age 15–49 who slept under an ITN ranges from 64% in Kigezi region to 82.6% in Lango (Figures: 22 and 23)

Figure 23: ITN use by Children under 5 and Pregnant Women by Region

Seasonal Malaria Chemoprevention (SMC):

SMC was implemented in nine districts of Karamoja targeting children aged 3–59 months. The children administered five cycles of Sulfadoxine–Pyrimethamine (SP) and Amodiaquine (AQ) (SPAQ) during the peak malaria transmission season (May to September). Overall, a coverage of 101.7% was reached with 287,245 children over the target of 282,357.

Indoor Residual Spraying with Insecticide (IRS):

IRS was deployed in 20 districts using the organophosphate, Actellic. In Eastern Uganda, seven districts (Tororo, Bugiri, Butaleja, Namutumba, Butebo, Budaka, and Pallisa) were targeted. Spraying was done in February/March 2025, achieving a coverage of 94%, protecting a population of 2,991,117 in that round.

In West Nile and mid north, 13 districts (Adjumani, Arua, Koboko, Terego, Moyo, Maracha, Madi-Okollo, Obongi, and Zombo in West Nile, and Amolatar, Dokolo, Kaberamaido and Kalaki in mid north) were targeted. Spraying was done in November/December 2024 achieving a coverage of 95% protecting a population of 2,752,308.

HIV Prevention, Care and Treatment

A total of 1.5 million Ugandans is estimated to be living with HIV/AIDS virus. The Health Sub programme continues to focus on prevention of transmission as well as care and treatment for the affected population.

Elimination of Mother to Child Transmission: In FY2024/25 92.9% of the women attending ANC1 were tested for HIV and all those who tested positive were enrolled on ART for EMTCT. Of the

women who enrolled on ART for EMTCT who had viral load tests done at 6 months, 94% achieved successful VL suppression. The ART retention rate at 12 months in pregnant and lactating women declined from 86% (2022/23–2023/24) to 72% in 2024/25.

Syphilis testing at ANC improved from 88% in FY 2023/24 to 95% in FY 2024/25, showing consistent strengthening of dual testing (HIV/syphilis) while Treatment initiation for syphilis-positive women remained stable, improving slightly from 78% to 83%, indicating moderate progress but still below optimal targets.

Out of the 70,295 HIV exposed babies that accessed DNA 1st PCR, 63,774 (91%) were tested within 8 weeks of birth. The proportion of HIV exposed infants that received a positive result was 1.1% (774/70,295).

HIV Positive Pregnant Women initiated on ARVs for EMTCT

HEIs Breastfed for 12 Months	47,071	59%	42,376	53%	59,457	75%	45,528	57%	43,686	60%
Mothers Alive & on ART 12 months after starting ART (Last quarter of FY)	3,447	81%	2,993	84%	2,885	86%	2769	86%	10,135	72%

The ART coverage for HIV positive pregnant and lactating mothers was at 91% below the target of 95%. Kigezi (99%), Bugisu (97%), North Buganda (96%), Bunyoro (95%), and Tooro (95%), demonstrating exceptional performance in enrolling and retaining pregnant and lactating

women on ART. Kampala (78%) and Karamoja (80%) with lowest performance indicates possible programmatic challenges: Possibly related to urban mobility and transient populations (Kampala) or nomadic lifestyles and access barriers (Karamoja). with possible implications for mother-to-child HIV transmission rates.

FIGURE 24: MATERNAL ART COVERAGE FOR EMTCT BY REGION FOR FY 2024/25

The proportion of HIV exposed infants with the first DNA/PCR test within 2 months of age

Figure 25: Figure 27: Regional Coverage of 1st DNA PCR Coverage within 2 months

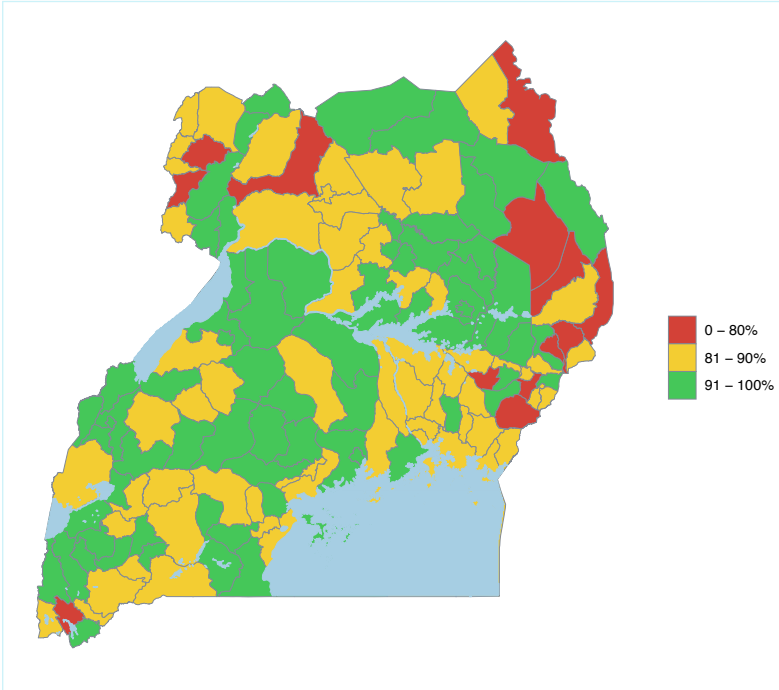

Figure 26: Map showing HIV Exposed Infants with the First DNA/PCR Test within 2 months of age FY 2024/25

ART Coverage based on service data was 93% in FY 2024/25 against a target of 95%. The 2024 Naomi Estimates provided an even lower estimate for at ART coverage of 85%. In this period, the sector continued with implementation of the test-and-treat policy, deployed efficient

methods of service delivery like Differentiated Service Delivery models and ensured availability of ARVs in both the public and private health facilities. The regional ART coverage outputs are detailed in Figure 27.

Figure 27: ART Coverage by Region in FY 2024/25

Table 36: Quarterly ART Coverage FY 2024/25 (Based on Spectrum Estimates)

Reporting Period	Estimated PLHIVs	Current on ART	ART Coverage
Jul to Sep 2024	1,492,410	1,459,942	97.8%
Oct to Dec 2024	1,492,410	1,462,358	98.0%
Jan to Mar 2025	1,527,238	1,439,963	94.3%
Apr to Jun 2025	1,527,238	1,417,232	92.8%

ART retention rate at 12 months decreased from 82.3% by end of FY 2023/24 to 80% by end of FY 2024/25. Only 13 (12%) out of 147 LGs achieved the target of 95%.

Table 37: Top and Bottom Ten Ranking LGS in ART Retention FY 2024/25

Rank	Top Five (5) LGs	% Retention	Rank	Bottom Five (5) LGs	% Retention
1	Buhweju District	100%	1	Napak District	50%
2	Kapelebyong District	100%	2	Gulu City	60%
3	Karenga District	100%	3	Butaleja District	62%
4	Kotido District	100%	4	Moyo District	64%
5	Rubirizi District	100%	5	Nakasongola District	66%

Figure 28: ART Retention Rate at 12 months by Region in FY 2024/25

ART Viral Load (VL) testing Coverage among all People Living with HIV and AIDS (PLHIV) on treatment has dropped from 96% in FY 2024/25 to 89% in FY 2024/25. The target for 95% viral coverage was not achieved in the reporting period as this was greatly contributed to by the stop work order (SWO) effect. Viral load coverage was lowest in the male adults 20+ with an overall output of 78%.

ART Viral Load (VL) Suppression Rate among all PLHAs on treatment has dropped from 96% in FY 2024/25 to 95% in FY 2024/25. The target of 95% viral suppression rate was achieved in the reporting period. Viral suppression was lower among children 0–9 years (89%), adolescents 10–19 years (90%); and males (94%) all below the 95% set target. The regional and local government Viral load coverage and suppression rates outputs are detailed in Figure 29, Table 38 and Figure 30.

The TB Case Notification reduced from 185/100000 in FY2023/24 to 176/100000 in FY 2024/25. TB case finding realized 82,771 (92%) TB cases notified against 90,007 expected cases. In FY there was sustained TB CAST+ campaign, coupled with the deployment of mobile TB clinics and community screening with portable X-ray units, improvement in diagnostic access.

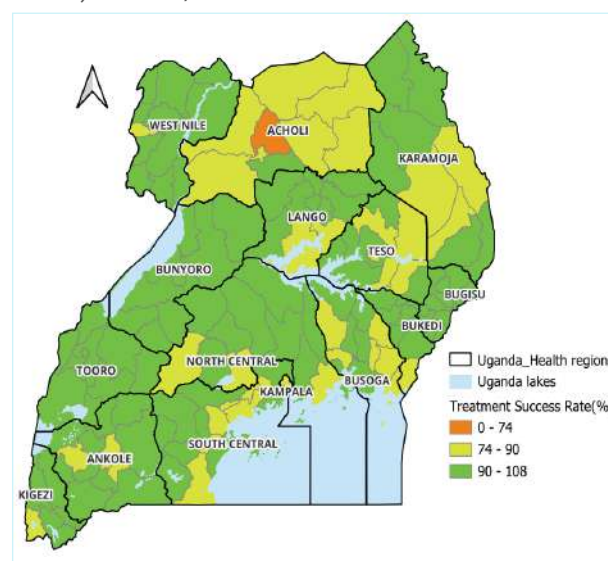

Figure 31: Map Showing TB Case Notification Rate by LG in FY 2024/25

Karamoja reported the highest levels of TB notification by region. We observe similar patterns in local governments across the country (Darker reds), with Moroto district reporting the highest levels of TB notification at 718/100,000, followed by Jinja City at 665, and Kalangala 596 highest district.

TB Treatment Outcomes as measured by TB treatment success rate (TSR) declined slightly from 92.8% in FY23/24 to 92.5% in FY 2024/25. TB treatment success rate remains higher than the national target of 90%. We observe regional variation in the TB treatment success rate, with West Nile, Bunyoro, and Bugisu regions (above 94%) and Acholi region recording the lowest TSR at 86.5%.

Figure 32: TB Treatment Success Rate for all DS-TB Cases, FY2024/25

Drug-Resistant TB

A total of 841 DR-TB patients were reported in FY 2024/25 compared to 792 in FY 2023/24. The increase in number of cases is largely attributed to improved drug susceptibility testing for rifampicin.

Table 39: Percentage of Expected DR-TB Notified and Started on Treatment by Region, FY2024/25

DR-TB Treatment Success Rate (TSR)

The TSR for the completed DR-TB cohort of 2022 improved to 89.3% (Table 33), compared to 88% for the completed cohort of 2021. Good TSR for DR-TB was observed among children at 98%, the 9-11 months regimen 90% and

individualized regimen at 86%. TSR was lowest among malnourished patients at 82% followed by HIV/DR-TB co-infected at 85%. A new 6-months regimen was introduced for treatment of DR-TB patients in FY 2024/25, 58% of the DR-TB patients had been enrolled on the new regimen.

Leprosy Notification and Treatment

Overall, there was a reduction in the number of leprosy cases notified from 315 in FY 2023/24 to 23973 in FY 2024/25, with more females (59%) being reported. There was also a decrease in the proportion of child leprosy cases, from 15% in FY 2023/24 to 140% in FY 2024/25. West Nile region has consistently reported the highest

number of new leprosy cases, accounting for over 731% (19970 cases) in FY 2024/25. Of all new notified leprosy cases, 14% were among children. Of these, 18% presented with grade-2 disability at diagnosis, both below the national targets (<3% and <5% respectively). The treatment success rate for leprosy increased from 93.5% in FY 2022/23 to 95.4% in FY 2024/25.

Table 41: Number of New Leprosy Cases by Region

Regions	FY 2020/21	FY 2021/22	FY 2022/23	FY 2023/24	FY 2024/25

Zoonotic disease detected and managed timely:

Uganda recorded several disease outbreaks and other PHEs that were responded to within the financial year. Outbreaks included Ebola Virus

disease, Congo Crimean Hemorrhagic Fever, Yellow fever, Zika Virus, Rift Valley Fever, Anthrax, Measles, Rabies, Covid-19 and Cholera. Several other public health emergency incidents that were detected and responded to included food poisoning and floods as shown in the Figure 33.

Figure 33: Distribution of PHES across Uganda FY 2023/2024

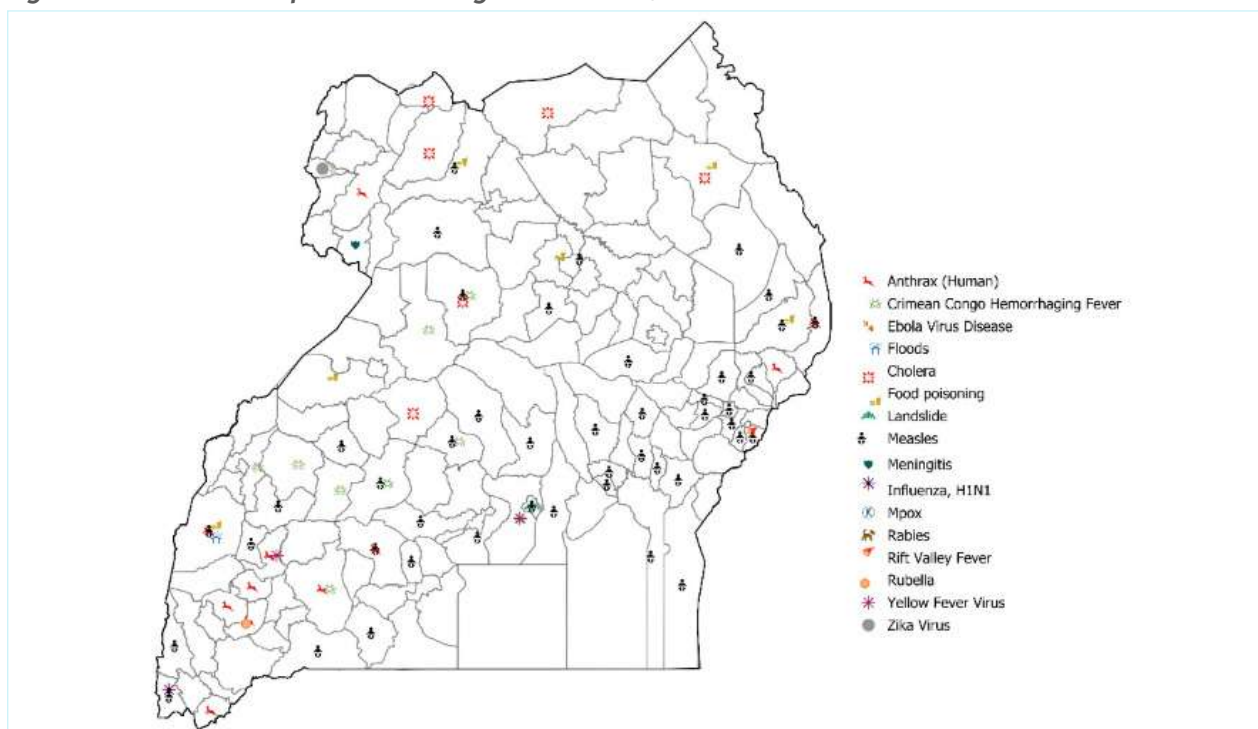

Figure 34: Number of Confirmed Outbreaks

Table 42: Cases of Public Health Emergencies (PHES) Diagnosed FY24/25

Public Health Emergency	Confirmed Cases	Deaths	Crude Fatality Rate (CFR) (%)
Anthrax	72	17	24%
Cholera	93	3	3%
Crimean Congo Hemorrhaging Fever (CCHF)	10	4	40%
Ebola Virus Diseases (EVD)	12	4	33%
Floods	-	31	
Food Poisoning	27	13	48%

Rift Valley Fever (RVF)	1	1	100%
Rubella	4	-	0%
Yellow Fever Virus (YFV)	25	-	0%
Zika Virus (ZIKV)	1	-	0%
Total	8,459	172	2%

Between July 2024 and June 2025, Uganda recorded public health emergencies for 16 disease conditions with a total of 8,459 confirmed cases with 172 deaths (CFR = 2%). MPox contributed the largest case burden (7,582; CFR = 1%), while food poisoning (CFR = 48%), CCHF (40%), EVD

(33%), and anthrax (24%) showed the highest fatality rates.

Although rare, Rift Valley Fever recorded 100% CFR, and environmental events like landslides and floods caused notable mortality.

Table 43: Distribution of Confirmed Public Health Emergency Events in Uganda by Months

Emergency	Jul-24	Aug-24	Sep-24	Oct-24	Nov-24	Dec-24	Jan-25	Feb-25	Mar-25	Apr-25	May-25	Jun-25

Zika Virus (ZIKV)	1											

The heat map visualizes the monthly distribution of confirmed Priority Public Health Emergencies in Uganda between July 2024 and May 2025. For VHF, cases were reported for Crimean-Congo Hemorrhagic Fever, Ebola Sudan Virus, Zika Virus, Yellow Fever Virus, and Rift Valley Fever, though activity was sporadic, with most months showing no confirmed cases.

For Other Priority PHEs, a several events were captured, including Anthrax, Food Poisoning,

Cholera, Bacterial Meningitis, Measles, and Flood-related incidents. The heat map provides a quick comparative overview of which PHEs were most active and when, guiding prioritization of response efforts and preparedness planning.

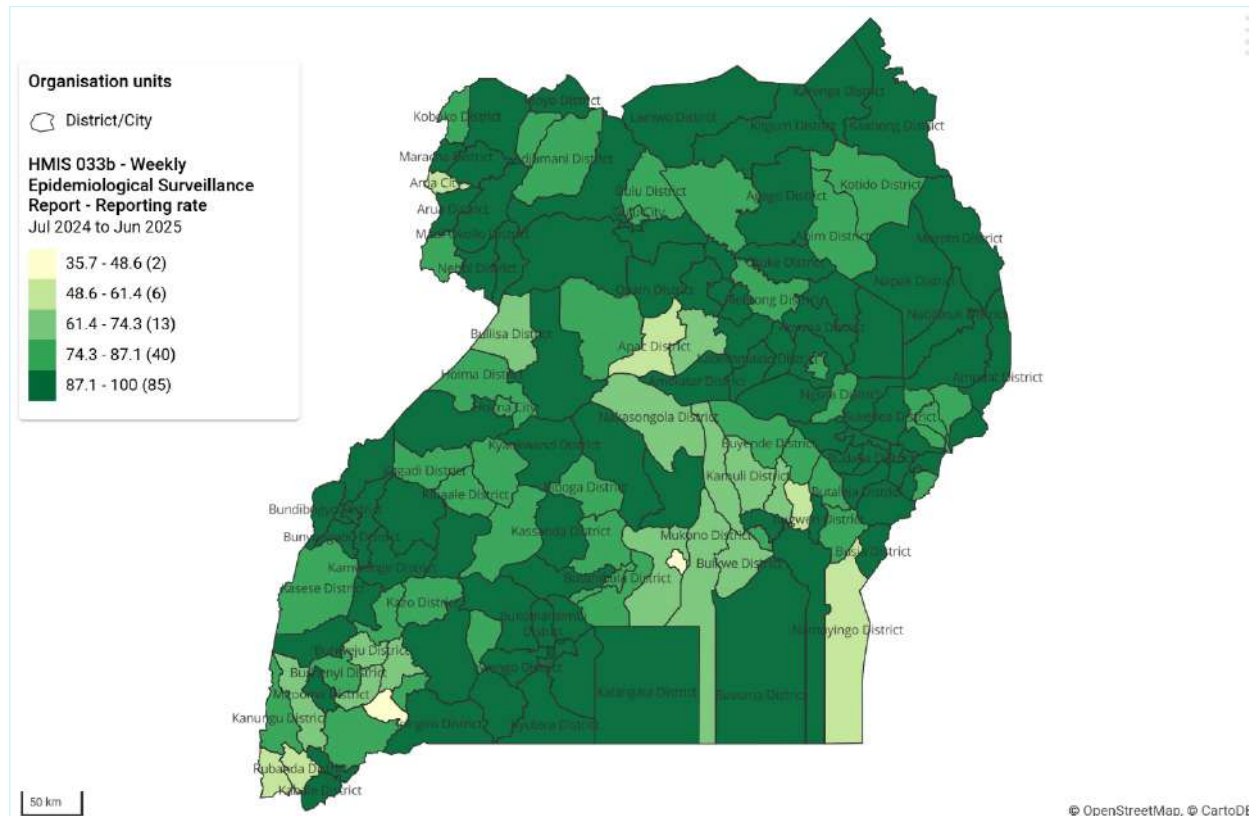

Weekly Surveillance Reporting Rates

The National average Weekly Surveillance reporting rates FY: 2024/2025 was at 75.9% compared to 81.4% in FY: 2023/2024 and this reduction in the reporting rates was caused by

the mTrac SMS system challenges that occurred during the reporting period. 76% (111/146) of the districts met the National target of 80% reporting rate while 23.9% (35/146) of the districts were below the National target.

Kampala had the lowest reporting rate of 35.7% followed by Rwampara 45.1%, Kisoro 52.8%, Namayingo 54.7% and Iganga 54.9% as shown in Figure 35.

Figure 35: Map Showing Weekly Surveillance Reporting Rates by LGS in FY 2024/25

During FY 24/25, 56 out of 61 districts achieved the target of eliminating blinding trachoma. Progress is still at 91%. The districts of Amudat, Moroto, Nabilatuk, Nakapiripirit and Buliisa await Transmission impact surveys following completion of adequate Mass Drug Administration (MDA) rounds which would guide on whether to have repeat MDA or will have achieved elimination. There is ongoing

cross border surveillance for Trachoma with Turkana community.

Tobacco Non-Smoking Rate

During the period under review, the reported level of tobacco use among clients attending OPD was 0.32% down from 0.35% the previous year. Reported tobacco exposure reduced slightly from 0.6% in FY 2023/24 to 0.59% in FY 2024/25.

Table 44: Reported Tobacco Use and Tobacco Exposure by Clients Attending OPD

FY	OPD Attendance	Tobacco Use	% Tobacco Use (OPD)	Change in Tobacco Use	Tobacco Exposure	% Exposure (OPD)	Change in Tobacco Exposure
FY 2020/21	46,723,443	201,862	0.43%		351,388	0.75%

IPTp3 Coverage for Pregnant Women

Figure 36: Map showing IPTp3 coverage by LG in FY 2024/25

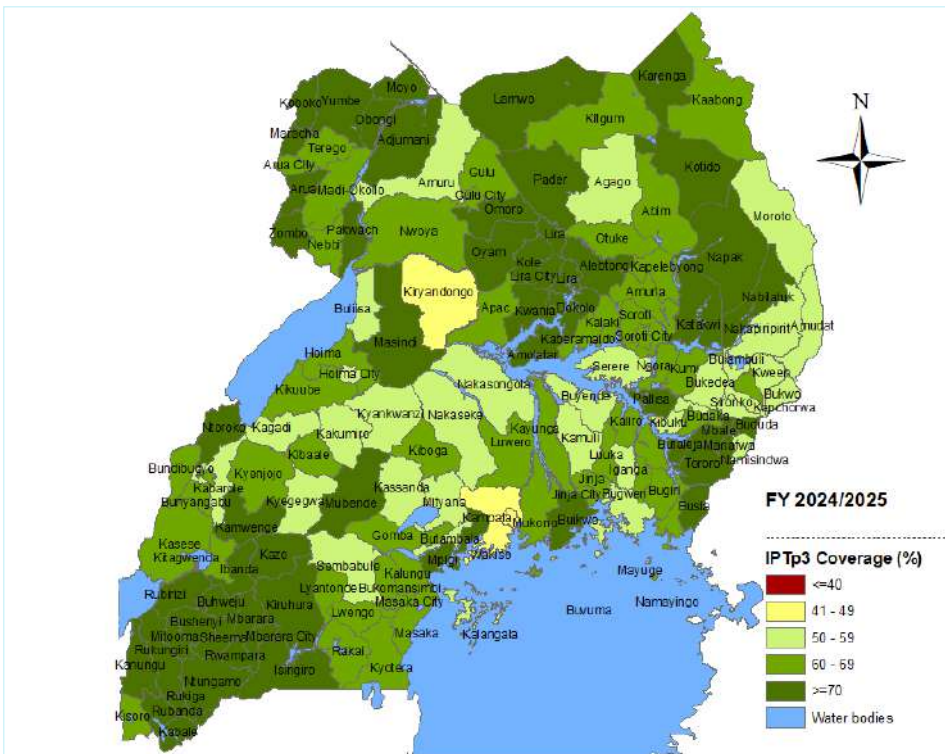

Figure 37: Regional Variation in the Coverage of IPTp3 in the last two FY

In Uganda, 87% of women with a live birth in the 2 years before the survey reported taking two or more doses of SP/Fansidar during their last pregnancy and 73% reported taking three or more doses (Figure 36). Trends: The proportion of women with a live birth in the 2 years before

the survey who took three or more doses of SP/Fansidar during their last pregnancy increased from 10% in 2011 to 28% in 2014-15, then decreased to 17% in 2016 and increased again to 41% in 2018-19, and 73% in 2024.

Figure 38: Trends in IPT3+

Table 45: IPT3 coverage for Top 10 and Bottom 10 LGs

Bottom 10 LGs			Top 10 LGs		
#	District	%	#	District	%
1	Kampala	44.1	1	Obongi	85.3
2	Wakiso	47.1	2	Oyam	87.6
3	Kiryandongo	48.6	3	Kabale	88.1
4	Kassanda	50.3	4	Mbarara	90.6
5	Kagadi	50.9	5	Nabilatuk	91.3
6	Namisindwa	51.3	6	Sheema	92.6
7	Kakumiro	51.3	7	Rubanda	96.4
8	Kween	51.7	8	Mitooma	97.3
9	Iganga	51.8	9	Kazo	99.3
10	Buliisa	51.9	10	Kiruhura	99.3

Anaemia Screening at First Prenatal Visit

Anaemia screening at first prenatal visit increased to 28% in FY 2024/25 from 22% in FY 2023/24, though performance remains below the national target of 65%. The low performance is primarily linked to insufficient laboratory supplies for haemoglobin estimation across health facility levels. Of those screened, 57,417 pregnant women (9%) were found anaemic with implication for supporting safe pregnancies and positive birth outcomes.

Antenatal Care 4th Visit Coverage

Antenatal Care 4th Visit coverage increased to 56% in FY 2024/25 from the 49.1% in FY 2023/24. Among the LGs, those with the highest coverage for ANC 4th visit were Kiruhura (115%), Lira City (106%), Mbale District (83%), Kazo (83%), and Mbale City (82%). The lowest coverage rates were recorded in Wakiso (30%), Kisoro (31%), Butambala (32%), Karenga (33%), and Buvuma (36%). First trimester ANC attendance rose from 37% in FY 2023/24 to 40% in FY 2024/25, a 3-point increase.

Figure 39: Trends in Early ANC Attendance & 4th ANC Visits

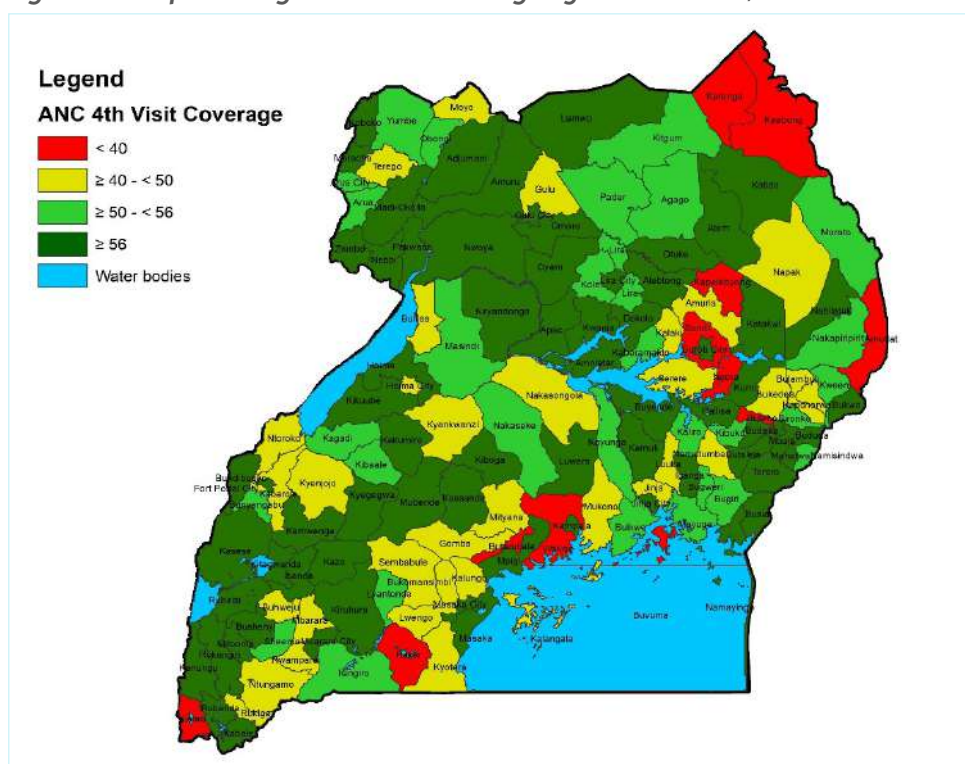

Figure 40: Map Showing ANC4 Visit Coverage by LG in FY 2024/25

The highest coverage for the 4th ANC visit was reported in Kiruhura (115.5%), Lira City (105.8%), Bududa (89.8%), Kazo (82.5%), and Mbale (82.5%). The lowest coverage was reported in Butambala (32.4%), Butebo (32.1%), Kisoro (30.8%), Wakiso (30.4%), and Amudat (27.6%).

The proportion of Pregnant Women delivering at Health Facility Deliveries

The highest proportions of health facility deliveries were recorded in Fort Portal City (143.8%), Gulu City (142.4%), Hoima City (133.1%),

Mbarara City (122.0%), and Butambala District (112.9%).

The lowest proportions were reported in Kabarole (41.6%), Amudat (39.8%), Kalangala (39.1%), Wakiso (37.7%), and Luuka (35.4%).

The high facility deliveries in Butambala are mainly due to the location of Gombe Hospital, which serves patients from neighboring districts without a general hospital. Most referrals come from Gomba, Mityana, and parts of Wakiso.

Figure 41: Map Showing the % of Health Facility Deliveries by LG in FY 2024/25

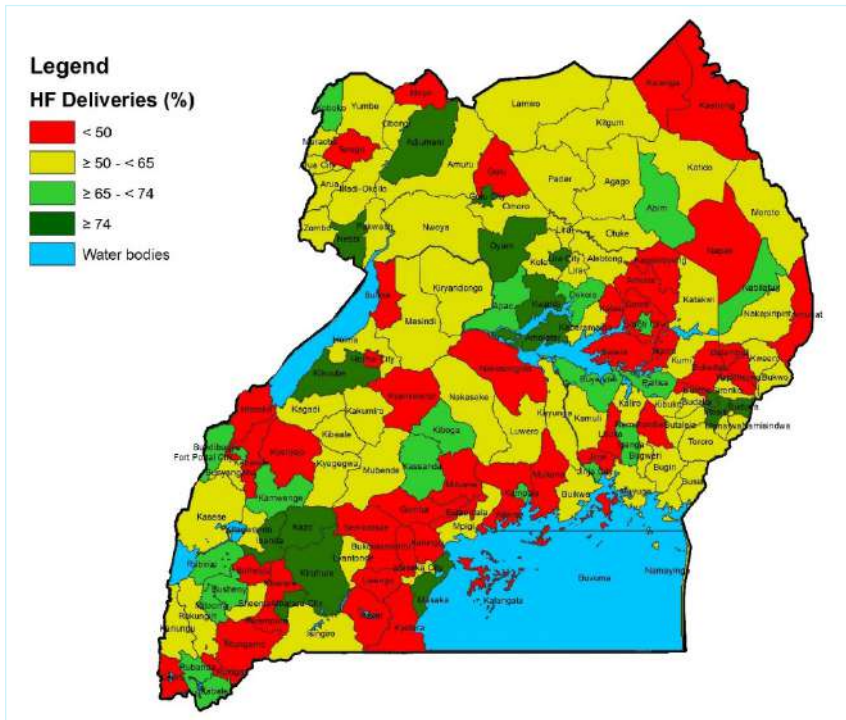

Table 46: Trends in Health Facility Deliveries by Health Facility Level

Level	FY 2022/23		FY 2023/24		FY 2024/25	
	Number	%	Number	%	Number	%

Total	1,412,855	100	1,478,999	100	1,586,708	100%

The proportion of HC IVs providing CeMNOC (C/S and blood transfusion) increased by 18.1% to 78% (221/284), and the proportion of HC IVs conducting C/S was 86% (243/284) in

FY 2024/25 compared to 84% (227/271) in FY 2023/24. Overall, there is an increase in the number of HC IVs reporting.

Maternal deaths among 100,000 health facility deliveries reduced from 82.7/100,000 in FY 2023/24 to 69.1/100,000 in FY 2024/25. The

number of maternal deaths and Institutional maternal mortality rate (IMMR) were highest at the referral hospitals (50.6%).

Causes of Maternal Deaths

Among the maternal deaths reviewed, Obstetric haemorrhage remains the leading cause of

maternal deaths accounting for 46% of deaths in the FY 2024/25 (PPH contributing 88% of all haemorrhage cases) followed by hypertensive disorders of pregnancy at 21% as shown below.

FIGURE 48: Causes of Maternal Deaths – FY 2021/22 TO FY 2024/25

Facility based fresh (FSB) still births (per 1,000 deliveries have reduced from 5.7/1,000 in FY 2023/2024 to 5.3/1,000 in FY 2024/2025. Tooro, Bugisu and Ankole regions had the lowest FSBs per 1,000 births. Bunyoro, Kampala and Busoga regions had the highest rate of FSBs per 1,000

births. Over the past two years (FY2023/24 and FY2024/25), the regions of Kampala, Acholi, and North Buganda have had the highest perinatal mortality rates. Ankole, Bugisu and Tooro regions have the lowest perinatal mortality rates generally below the national average.

Table 52: Rate of Perinatal Deaths by Type and Region in FY 2024/25

Maternal Deaths Reviewed

A total of 1,096 health facility–based maternal deaths were reported through HMIS 105 and event reports during FY 2024/25. Of these, 84.9% were notified, a decline from 95.4% in

the previous financial year. Similarly, 88% of reported deaths were reviewed compared to 94.8% in FY 2023/24. Both notification and review performance fell below the national target of 95%.

Figure 45: National Trends in Institutional Maternal Deaths Reported, Notifications and Review Rates

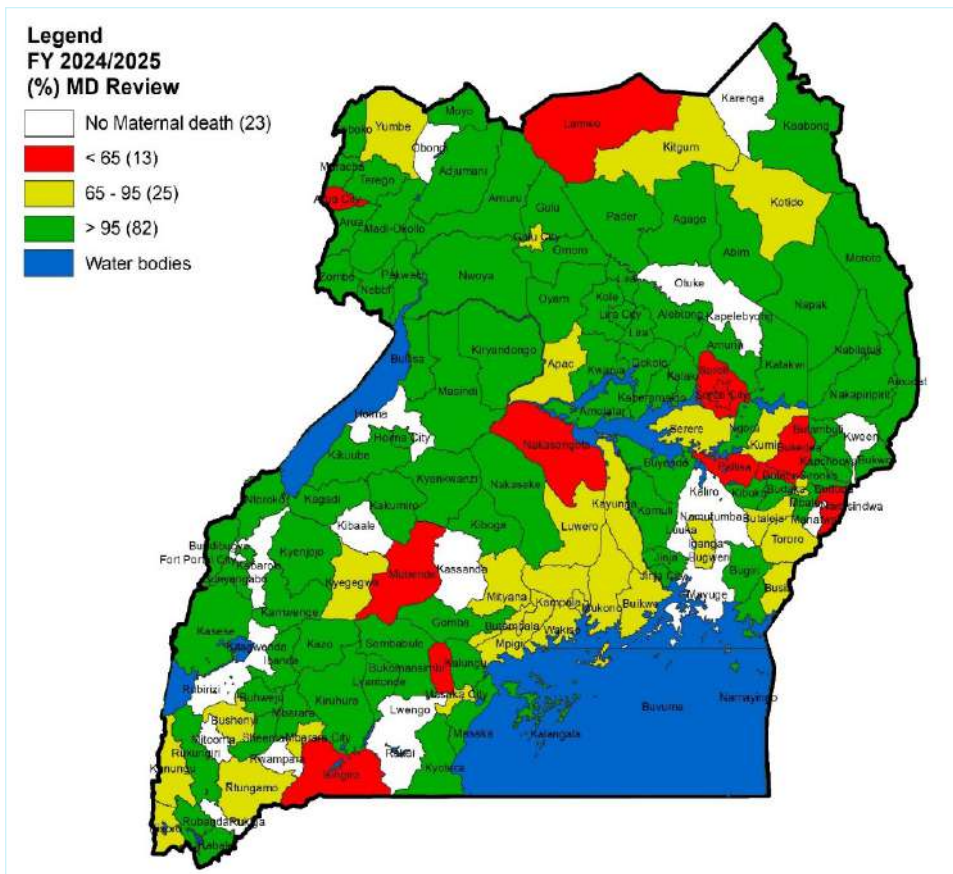

Figure 46: Map showing the % of Maternal Deaths Reviewed by LG in FY 2024/25

It is worth noting that several LGs (23) had no maternal deaths reported from the health facilities. This is likely to raise from the non-reporting or tendency to refer to higher level facilities. There is need to study the cause of no maternal deaths reported in these local governments.

Overall, the process of maternal death notification and reviews has been embraced by all regions, though there was a significant reduction in proportion of maternal deaths reviewed in Teso region from 111.1% in FY 2023/24 to 42.2% in 2024/25.

Table 53: IMMR, Maternal Death Notification and Reviews by Region

Region	No. Maternal Deaths		% Maternal Death Notifications		% Maternal Death Reviews	
	FY23/24	FY24/25	FY23/24	FY24/25	FY23/24	FY24/25

Perinatal Death Reviews

Perinatal death reviews declined to 56.2% in FY 2024/25, from 61.3% in FY 2023/24. Notification also dropped to 55.0% compared to 61.3% in

the previous year. All Local Governments (LGs) reported at least one perinatal death during FY 2024/25.

Figure 47: Map Showing the Proportion of Perinatal Deaths Reviewed by LG in FY 2024/25

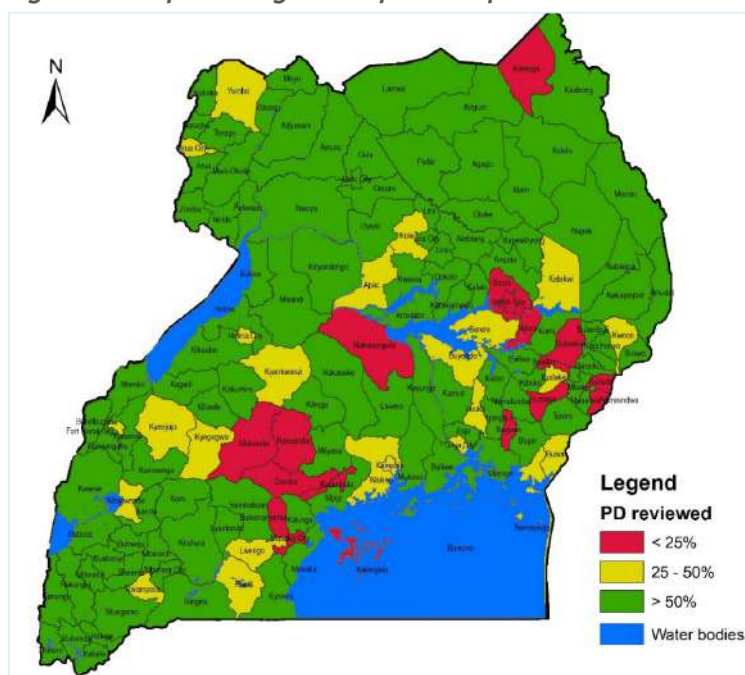

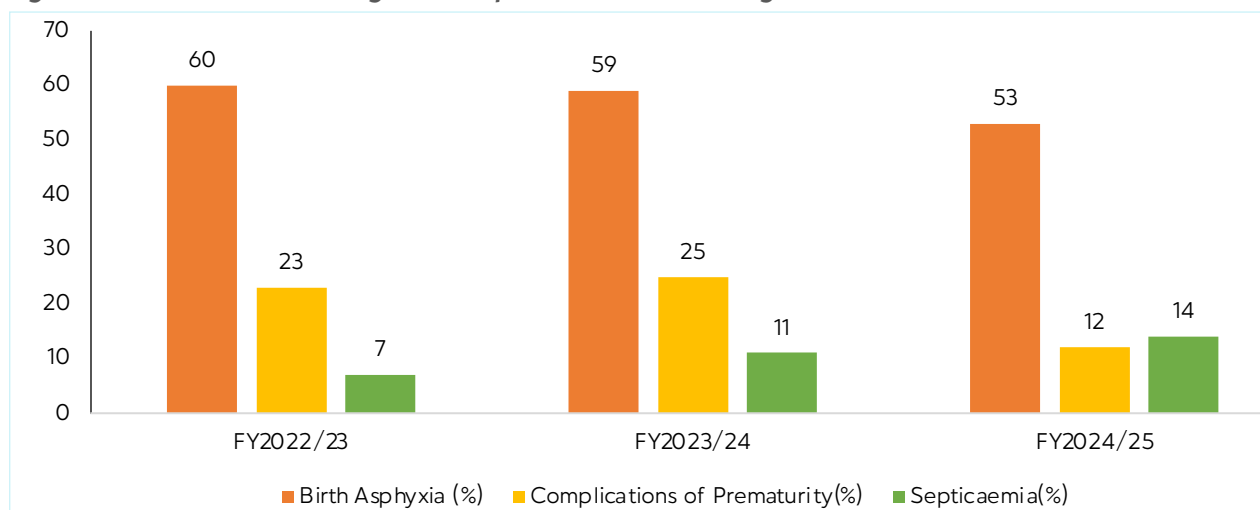

Table 54: Proportion of Reviewed Perinatal Death Notifications and Review by Region

Region	Total Perinatal Deaths		Perinatal Death Notification Rate (%)		Perinatal Death Review Rate (%)	
	FY 2023/24	FY 2024/25	FY 2023/24	FY 2024/25	FY 2023/24	FY 2024/25

Birth asphyxia remains the leading cause of early neonatal deaths, with septicaemia now

emerging as the second leading cause, followed by complications of prematurity.

Figure 48: Trends in the Leading Causes of Neonatal Deaths in Uganda

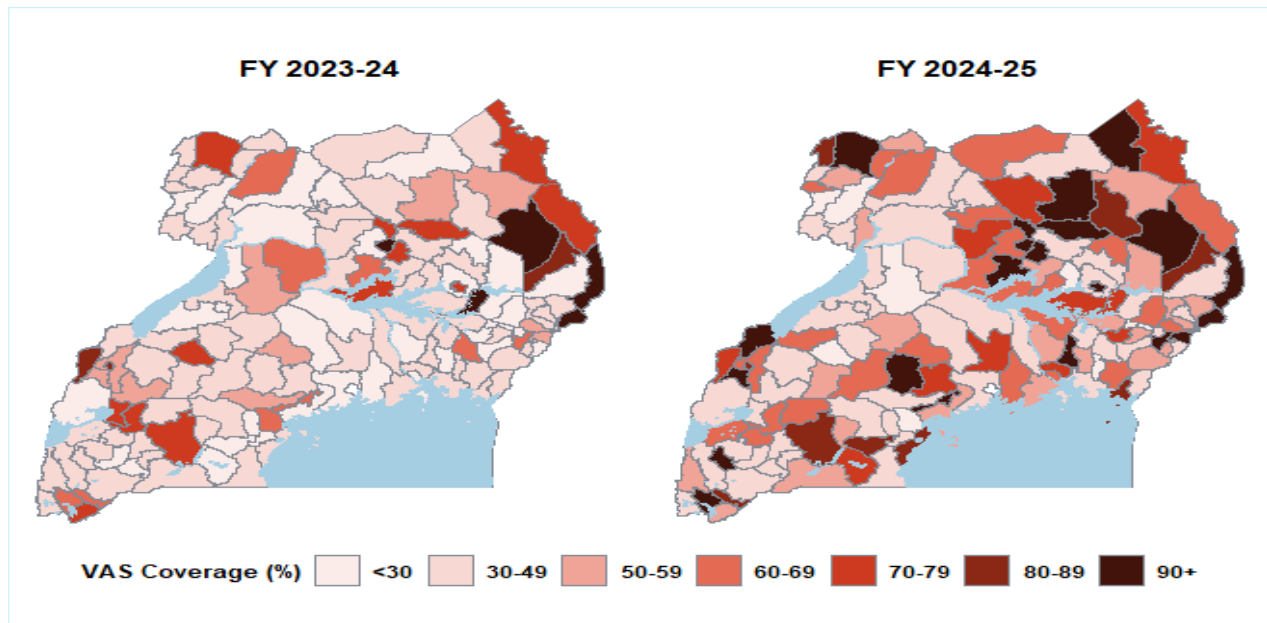

Under-five Vitamin A second dose coverage

Increased from 47% FY2023/24 to 57% FY2024/25. Some districts, such as Kalungu, Bugweri, and Masindi, report very low coverage rates (32–38%), while others, including Ntoroko, Lira City, Bunyangabu, Rubanda, and Amudat,

show moderate progress (42–44%). This improvement is attributed to better training for healthcare providers and the consistent availability of Vitamin A. However, coverage remains below the Health Sector Development Plan (HSDP) target of 80%.

Figure 49: Vitamin A Supplementation 1st and 2nd Dose Coverage by District For FY 23/24 and 24/25

Proportion of Pregnant Women receiving Ferrous Sulphate/Folate Supplement on First Visit

A total of 2,016,115 pregnant women attended antenatal services, of which 71.6% received Iron and Folic Acid (IFA) supplements in FY2024/25, up from 68% in FY2023/24. Despite this improvement, performance remains below the national target of 85%. The increase is largely due to stock availability, training of health workers on nutrition services, and adequate counseling and nutrition education.

At regional level, Kigezi recorded the highest coverage (78.1%), while South Buganda (57.5%) and Teso (59.2%) had the lowest. District-level performance also showed sharp variations, with Kampala (100%), Pader (98%), Ngora (96%), Rukiga (96%), and Buliisa (94%) performing strongly. In contrast, Kamuli (47%), Kikuube (47%), Nakapiripirit (50%), Rubanda (51%), and Kasese (55%) recorded the lowest coverage, highlighting persistent inequities in access and service delivery.

Figure 50: Pregnant/Lactating Mother Received Iron & Folic Acid Supplementation by Region

2.4 ESSENTIAL MEDICINES AND HEALTH SUPPLIES (EMHS)

This section presents an overview of the status of Essential Medicines and Health Supplies including financing/funding, medicines

ordering and reporting, availability at both national and sub-national levels, and anti-microbial resistance patterns.

2.4.1 Financing for Essential Medicines and Health Supplies

Table 55: National Funding Landscape for EMHS in FY 2024/25

Item	FY 23/24	FY 24/25
Total Commodity Need	928,601,525	1,059,247,642
Projected Carry Over stock	(146,159,064)	(58,971,731)
Total procurement Need	782,442,461	1,000,275,911
Total commitments Available	419,972,070	509,261,981
Funding Gap	362,470,391	491,013,930

There was a 14% increase in the total national EMHS funding need in FY24/25 compared to the previous year FY23/24. This is mainly attributed to scale up of new interventions, increase in targets for service delivery coverage, population increase as well as raise in disease burden.

The funding commitments in FY24/25 could only cover up to 51.9% of funding need. This calls for urgent increase for health commodity financing both domestically and from other sources.

Figure 51: Funding Sources for EMHS

Of the available budget for EMHS in FY24/25, 35.7% was from the Government of Uganda and the development partners contributed the bigger portion of 64.3%. This calls for increased domestic funding as per the commitments in the 10-year health supply chain roadmap.

2.4.2 EMHS Credit Line at National Medical Stores (NMS)

The table below illustrates the budget that was available for EMHS during FY 2024/25. The overall budget for EMHS at NMS increased by 26.0% (Ugx. 139.7 billion) from Ugx. 537.96

billion to Ugx 677.74 billion for the FY 2024/25. Significant increase was realized for HC IVs (78.0%), Butabika NRH (75.0%), Uganda Heart Institute –UHI (68.8%), RRHs (54.1%), HC IIs (52.8%), Lab Commodities (51.9%), GHs (44.4%), Reproductive Health Commodities (29.4%) and Anti-TB medicines (28.6%).

The NCDs despite being among the top causes of death among the adult population did not receive any increase in the budget allocation. Government should increase funding for NCD commodities at all levels of care.

Table 56: Public Health Facility Credit Line Budget Allocations

Level of Care	Budget Holder	HFs	FY 2023/24	FY 2024/25	% Change
HC II	Credit Line	1,768	15,163,236,942	23,163,236,942	52.8%

Grand Total		3,432	537,964,466,942	677,738,202,242	26.0%

2.4.2.4 EMHS Credit Line for PNFP's at Joint Medical Stores (JMS)

Table 57: Fund Allocation and Utilisation Comparison across previous Financial Years

Financial Year	Total Funds Received (UGX)	Total Utilized (UGX)	Utilization %	Facilities Served
2021-2022	13,790,170,081	13,682,304,239	99%	556
2022-2023	13,681,273,223	13,638,120,137	100%	548
2023-2024	13,617,414,644	13,605,013,995	100%	552
2024-2025	19,406,429,993	19,373,653,164	100%	553

Over the past four financial years, the allocation and utilization of PHC funds under the EMHS credit line have consistently demonstrated high levels of efficiency and accountability, with utilization rates maintained between 99% and 100%. Since FY 2021/22, the EMHS credit line allocation for the PNFP sector has registered considerable 41.6% growth demonstrating the GOU commitment towards improving health service delivery needs and attainment of universal health coverage. The number of health facilities has remained relatively stable with minimal fluctuations due to accreditation-related changes affecting the number of eligible facilities.

2.4.3 Essential Medicines Reporting

The Medicines' stock status reporting rates for FY 2024/25 reveal notable inconsistencies and underperformance relative to the national

target of 90% across all months. While July (92%) and October (91%) met the target for general reporting rate, and a few other months came close (September at 86%), there were steep declines in several periods, with February (58%) and April (7%) standing out as critical low points. The complete reporting rate was even more concerning, peaking at just 84% in July, then dropping sharply in February (36%) and reaching an all-time low of 3% in April.

These fluctuations reveal systemic challenges in data collection reflecting broader health system disturbances, such as the USG stop-work order and technical issues with the supply chain information systems (system down time). These systemic weaknesses emphasize the urgent need to stabilize reporting mechanisms and improve digital infrastructure and human resource capacity at health facility level.

Figure 52: Monthly Medicine Stock Status Reporting Rates and Completeness of Reporting in FY 2024/25

2.4.4 Average Availability of EMHS

The results show a concerning decline in the average availability of a basket of 50 tracer commodities across 4,211 reporting health facilities in Q4 FY2024/25, with overall availability dropping to 62%, far below the national target of 90%. EMHS (53%), ARVs (59%), and LAB commodities (50%) recorded particularly low availability, indicating critical stock challenges at service delivery points. While TB (75%) and RMNCAH (72%) commodities performed relatively better, they still fell short of the target. In contrast, central-level warehouses (NMS & JMS) showed better performance, achieving an overall availability of 77%, with notable improvements in ARVs (92%), TB (84%),

and RMNCAH (89%). However, EMHS and LAB availability at the central level remained below target at 59% and 61% respectively. These discrepancies between warehouse and facility-level availability highlight persistent bottlenecks in last-mile distribution, calling for urgent strengthening of supply chain logistics, redistribution mechanisms, and stock visibility across levels.

These results indicate that RMNCAH and TB commodities exhibited the highest availability, with 21% of facilities maintaining over 95% availability. The EMHS basket showed moderate availability, with 19% of facilities maintaining over 95% availability. In contrast, ARV commodities had lower availability, with only

15% of facilities achieving over 95% availability. Critically low availability was observed for laboratory commodities, with just 5% of facilities maintaining over 95% availability, respectively.

These findings underscore significant supply chain challenges, particularly for laboratory commodities and essential medicines in the EMHS basket.

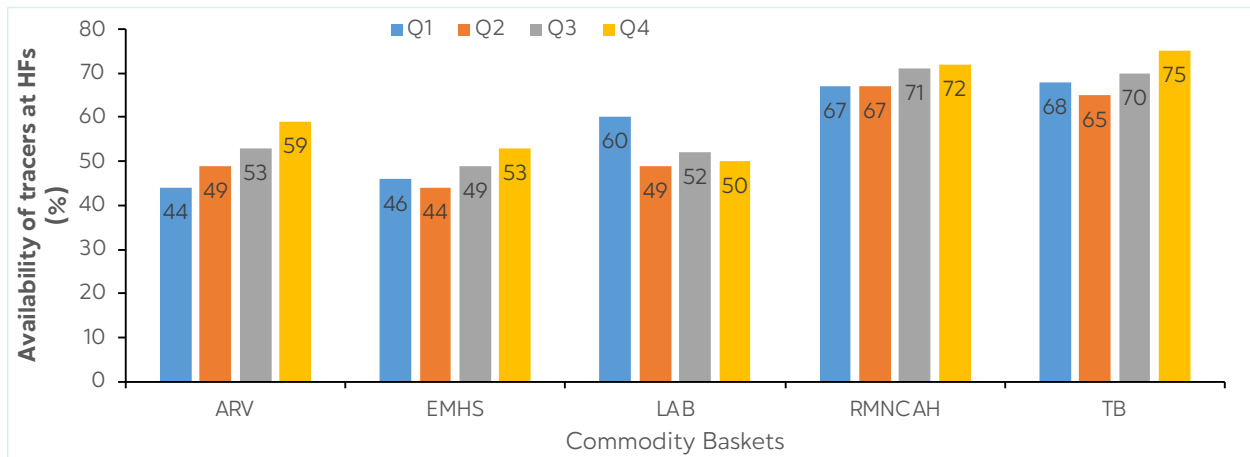

Table 58: Availability for the 50 Commodities at Health Facilities in FY 2024/25

Indicator	Disaggregation	Q4 FY2020/21	Q4 FY2021/22	Q4 FY2022/23	Q4 FY2023/24	Target FY2024/25	Q4 FY2024/25
Percentage availability of a basket of 50 commodities based on all reporting facilities in the previous quarter	EMHS	81	72	47	58	90	53
	ARVs	79	81	45	43	90	59
	TB	85	84	69	74	90	75
	LAB	78	72	73	79	90	50
	RMNCAH	83	80	57	67	90	72
	Overall	81	78	58	64	90	62
Percentage of facilities that had over 95% availability of a basket of commodities in the previous quarter.	EMHS	69	57	97	84	95	19
	ARVs	63	61	75	61	95	15
	TB	67	67	83	75	95	21
	LAB	52	63	78	77	95	5
	RMNCAH	55	66	79	55	95	21
	Overall	61	63	82	70	95	16
Percentage availability of supplies for a basket of 50 Commodities and health supplies at Central Level Warehouses (NMS and JMS).	EMHS	69	57	97	84	80	59
	ARVs	63	61	75	61	80	92
	TB	67	67	83	75	80	84
	LAB	52	63	78	77	80	61
	RMNCAH	55	66	79	55	80	89
	Overall	61	63	82	70	80	77

In FY 2024/25, the average availability of 50 tracer commodities at Health Facilities (HFs) gradually increased from 57% in Q1 to 62% in Q4, resulting in an annual average of 58%. In contrast,

the Central Level Warehouse maintained consistently higher availability, averaging 77% for the year despite a slight dip in Q2.

Figure 53: Average Availability of a Basket of 50 Commodities per Quarter in FY 2024/25

2.4.5 Anti-Microbial Resistance (AMR) Surveillance

Antimicrobial resistance has been noted across common antibiotics like penicillin, and cephalosporin. To mitigate the escalation of this, Ministry of Health in collaboration with partners, developed and disseminated the following tools; AMS guidelines, guidelines for the implementation of Medicine therapeutic committees (MTC), and an Antimicrobial Consumption and Use surveillance plan. MTCs have now been revamped in all referral

and General hospitals, AMS subcommittees have been rejuvenated in all hospitals, aiding the bi-annual facility implementation of Point Prevalence Surveys (PPS) and Drug indicator surveys in all public sector hospitals and selected PNFPs and PFPs. Key highlights of the drug indicator surveys are: Injectable encounter 0.04%

The findings from the AMR surveillance have been extracted from analysis of the Urine samples where E. coli was the commonest organism isolated.

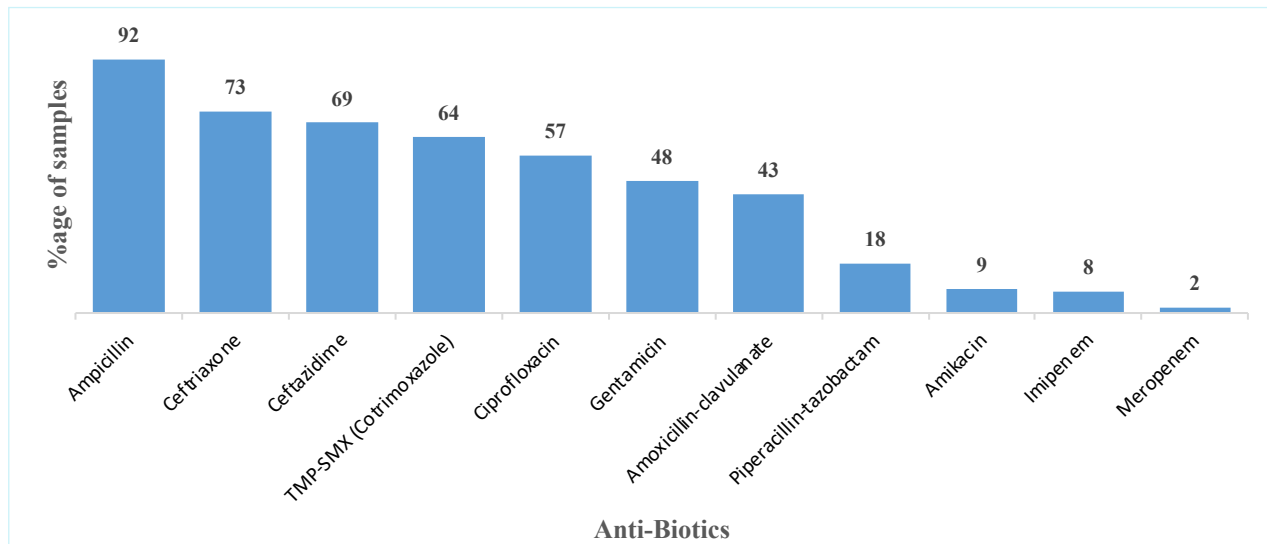

Figure 54: Illustrating the Most Common Organism identified during AMR Surveillance

AMR findings for the treatment of urinary tract infections (UTIs) and surgical site infections (SSIs) are summarized as follows: Enterobacterales

showed 92% resistance to Ampicillin and over 10% resistance to Carbapenems (Graph 4).

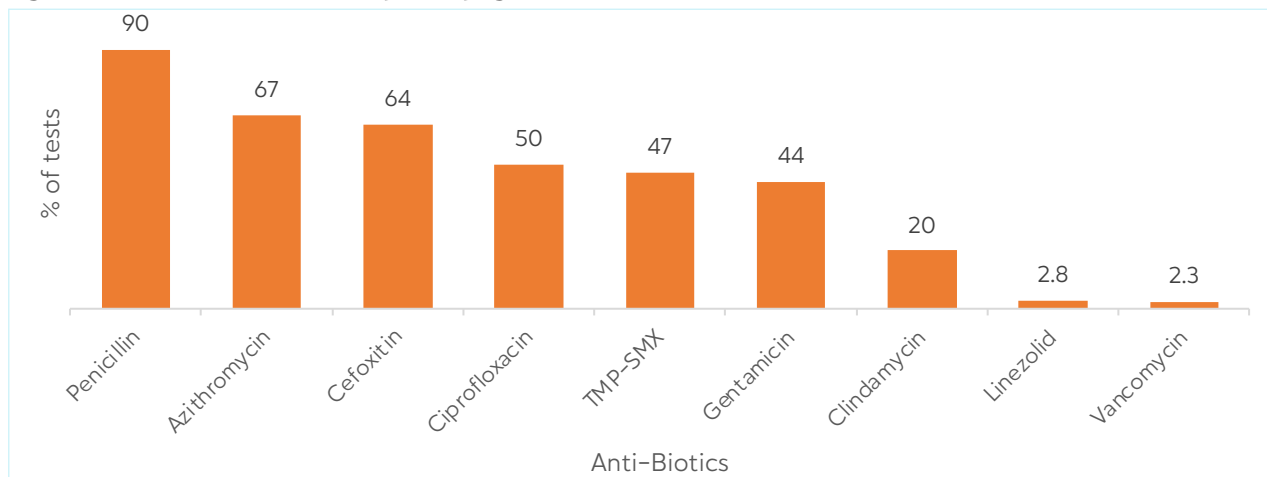

Figure 55: Antibiotic Resistance for Enterobacteriales

Staphylococcus aureus, a common cause of SSIs and capable of causing UTIs, demonstrated high resistance to Penicillin, with 64% resistance to Cefoxitin, indicating methicillin-resistant

S. aureus (MRSA) (Graph 5). These findings highlight the need for strict infection prevention and control (IPC) contact precautions.

Figure 56: Antibiotic Resistance for Staphylococcus Aureus

2.5 LABORATORY SERVICES

Laboratory External Quality Assurance (EQA)

The National External Quality Assessment Program (NEQAP) monitors public and private laboratories to ensure accurate and reliable test results, while strengthening quality management systems and supporting accreditation and certification initiatives. As of April–June 2025, NEQAP implemented 12 schemes, distributing 3,693 panels to participants.

Over the past five cycles, response rates for EID, VL, mRDT, CrAg, Gram, and HPV declined, mainly

due to reagent stock-outs and equipment breakdowns. However, pass rates improved across most schemes, with CBC, culture & sensitivity, and urinalysis achieving $\geq 80\%$ participation, and most schemes attaining $\geq 80\%$ pass rates following targeted mentorship. NEQAP expanded to include eight animal laboratories, one environmental health laboratory, and laboratories in five other countries participating in mRDT, Gram, culture & sensitivity, and CrAg schemes.

Table 59: EQA Pass Rate by Region

Region	EID	Hep.B	mRDT	Malaria Microscopy	CBC	CD4	Hep.B	CrAg	gram	Cul and sensitivity	Urinalysis

Health facilities implementing \geq 85% of Laboratory Test Menu

The "National Laboratory Test Menu" refers to the standardized list of laboratory tests that are deemed essential for healthcare delivery at various levels of care within Uganda. The primary goal is to provide a framework for strengthening health laboratory services and ensuring they support the delivery of the National Minimum Health Care Package (UNMHCP) in Uganda.

At the national level, test menu implementation improves progressively with the health facility level at the national level, test menu implementation improved progressively with the health facility level from 47% at HC III, 64% at HC IV, and 58% at GH, to 75% at RRH, indicating that higher-level facilities generally maintain better compliance with the recommended test menu.

Across regions, Kampala (63%) led at the HC III level, while Kigezi (68%) performed best at HC IV level. For general hospitals (GH), Kigezi (68%) also recorded the highest compliance, and at the RRH level, Busoga (81%) led. The lowest performance was observed in Bunyoro (37%) and Teso (41%) at the HC III level, as well as Karamoja (54%) at HC IV.

The test categories with the lowest implementation rates were Haematology, Blood Transfusion, Stool Microscopy, and Other Chemistry. More broadly, across all health facility levels, the test categories with the lowest overall performance included Stool, Other Chemistry, Microbiology, and Culture & Sensitivity.

The highest-performing test categories across all facility levels were Parasitology and Serology

Table 60: Test Menu Implementation Performance Per Region in FY 2024/25

2.6 HEALTH FINANCING

2.6.1 Health Financing Landscape in Uganda

In FY 2024/25, the total health sector resource envelope amounted to **UGX 4,069.84 billion** and the contribution from Government of Uganda (GoU) was **68.5%**, equivalent to approximately **UGX 2,786.67 billion**. This represents an increase

of **six (6%) percent** for domestic financing compared to the previous fiscal year. The contribution from donors (external financing) for the period under review stood at **UGX 1,283.17 billion**, representing **31.5%** of the sector budget.

Table 61: Health Financing Landscape by Category for FY 2024/25

Budget Category (Ugx Bns)	Approved Budget	Supplementary Budget	Revised Budget	% Share
Wage	1,234.38	6.30	1,240.68	30.5%
Non-Wage Recurrent	1,298.90	15.51	1,314.41	32.3%
GoU Development	196.11	35.47	231.58	5.7%
Total GoU	2,729.39	57.28	2,786.67	68.5%
External Financing	1,283.17	-	1,283.17	31.5%
Total	4,012.56	57.28	4,069.84	100%

As per Table 61 above, the total on-budget financing for health in FY 2024/25 was Ugx 4,069.84 billion which comprised of wage

(31%), non-wage recurrent (32%), domestic development (5%) and external development (32%).

Table 62: Allocations for the Health Sector during the NDPIII Period (2020-2025)

Year	Health Budget (Billions)	Total National Budget	Growth of:		Health as % of Total Budget
			National Budget	Health Budget	
2020/21	2,788	45,494	26.0%	7.7%	6.1%
2021/22	3,331	44,779	-1.6%	19.5%	7.4%
2022/23	3,685	48,130	7.5%	10.6%	7.7%
2023/24	4,050	52,737	9.6%	9.9%	7.7%
2024/25	4,069	72,136	36.8%	-0.9%	5.6%

Table 62 above indicates allocations for the last 5 years of the NDP III implementation period;

and the average allocation to the health sector was at **6.9%** of the National Budget.

Figure 57: Allocation Trends to Health During the NDP III

The trends in allocations, as depicted in Figure 59 above, demonstrated the commitment and consistency of Government to maintain the

allocations to the health sector above a threshold despite budget constraints.

Figure 58: Budget Allocation Trends in Health by Funding Source

In the financial year under review, GoU funding stood at 68% compared to donor support at 32% (Figure 60). Over the years, as external financing has been reducing, domestic allocations have been increasing to sustain essential health services and strengthen health system performance. Strengthening integration of off-budget resources into national planning, reporting and accountability mechanisms remain pertinent to ensuring efficient resource use within the sector.

2.6.2 Budget Performance for FY 2024/25

As per Table 63 below; the overall budget absorption under the health sub-program in FY 2024/25 was **86.2%**. Also, releases to the sector improved from 90% in FY 2023/24 to **97.2%** in FY 2024/25. However, under the development budget **Ugx 23.4 Bn** was not released which affected the completion rate of health facilities under the UPDF Engineering Brigade.

Table 63: Health Sector Budget Performance for FY 2024/25 by Budget Category in Ugx. Billions

Budget Category (Ugx Bns)	Approved Budget	Supplementary Budget	Revised Budget	% Share	Budget released (%)	Budget Absorption (%)
Wage	1,234.38	6.30	1,240.68	30.5%	99.7%	98.8%
Non-Wage Recurrent	1,298.90	15.51	1,314.41	32.3%	99.9%	97.6%
GoU Development	196.11	35.47	231.58	5.7%	89.9%	99.8%
External Financing	1,283.17	-	1,283.17	31.5%	93.4%	58.3%
Total	4,012.56	57.28	4,069.84	100%	97.2%	86.2%

Figure 59: Graph showing Health Sector Budget Performance by Category for FY 2024/25

The total budget under the health sector released was **97.2%** and as already shown, **86.2%** was spent during the fiscal year. The performance of external financing stood at **58.3%** and the major cause of this dismal performance was

attributed to delays in procurements, seeking no objections from funders and poor submission of accountabilities from Local Governments that received subventions from Gavi to support immunization programs.

Figure 60: Budget Performance for Externally Funded Projects

From the Figure 62 above, the performance of the following projects i.e., Karamoja Infrastructure Development Project, Rehabilitation of General Hospitals (Spanish swap) and UCREPP project was impressive with budget absorption above 80%. However, lower absorption rates were noted under the Global Fund (56%) and Gavi

(33%) resulting from budget execution issues as indicated above. There is a need for the sector to address the delayed implementation of donor-supported projects by identifying root causes and implementing measures to enhance service delivery.

2.6.3 Budget Performance by Health Institutions and Hospitals

Table 64: Performance by vote under Health Sub-Program in FY 2024/25

Vote Code	Vote Name (Ugx Bns.)	Approved Budget	Revised Budget	Release	Spent	% Release	Absorption

412	Lira Referral Hospital	17.694	17.694	17.472	17.188	98.70%	98.40%
413	Mbarara Referral Hospital	17.894	17.894	17.894	17.201	100.00%	96.10%
414	Mubende Referral Hospital	13.674	13.674	13.674	13.326	100.00%	97.50%
415	Moroto Referral Hospital	12.256	12.737	12.736	12.289	100.00%	96.50%
416	Naguru Referral Hospital	12.821	12.821	12.821	12.019	100.00%	93.70%
417	Kiruddu Referral Hospital	26.63	28.63	28.629	28.059	100.00%	98.00%
418	Kawempe Referral Hospital	23.632	23.632	23.632	22.19	100.00%	93.90%
419	Entebbe Regional Referral Hospital	11.758	11.758	11.758	11.33	100.00%	96.40%
420	Mulago Specialized Women and Neonatal Hospital	31.09	31.09	31.09	29.163	100.00%	93.80%
421	Kayunga Referral Hospital	12.764	14.154	14.154	13.545	100.00%	95.70%
422	Yumbe Referral Hospital	11.797	11.887	11.887	11.682	100.00%	98.30%
127	UVRI	7.12	7.213	7.213	6.993	100.00%	96.90%
612	Local Governments	1,123.63	1,149.85	1,149.85	1,149.85	100.00%	97.7%
	TOTAL	4,012.55	4,069.83	3,955.84	3,435.26	97.20%	86.20%

Table 64 above shows that the average release to the sector was at **97.2%** with low releases only under the Uganda Cancer Institute (UCI) and Uganda Heart Institute (UHI) under the projects supported by development partners under both votes. i.e., the Uganda Heart Institute Infrastructure Development Project and the ADB Support to UCI Project. However, the low expenditure noted was at Ministry of Health (63.1%), UBTS (89.5%) and Uganda Aids Commission (89.7%).

Data on Regional Referral Hospitals (RRHs) indicates that out of the Ugx 327 billion allocated, 99.9% was released and 95.8% was spent. This represents a satisfactory level of performance. RRHs such as Fort portal, Gulu, Jinja, Kawempe, Naguru and Mulago Specialized Women & Neonatal Hospital did not absorb all the funds due to delays to obtain clearance, to recruit staff under the new structure, from Ministry of Public Service.

2.6.4 Emerging Issues

The emerging issues under health financing include:

- **Growing domestic fiscal commitment:** The Government of Uganda's share increased from UGX 2,582 billion in FY 2023/24 to UGX 2,786 billion in FY 2024/25, marking a 7.9% rise in domestic resources despite fiscal constraints and reduced external inflows. 
- **Decline in external assistance:** On budget development partner support fell by 18% reflecting global aid contractions mainly due to the United States (US) Government withdrawal of funding from the health sector. 
- **Persistent fragmentation of off-budget resources:** There are considerable resources under off-budget financing that continue to flow outside government systems that is not easy to track and this requires budgets being aligned into one budget, one plan and an integrated monitoring system for better health outcomes. 

Government has adopted the following initiatives to improve health financing:

- **Revise the health financing strategy** and align it to the aspirations in the fourth national development plan, human capital development Programme implementation action plan, the health institutional strategic plans, and the national tenfold growth strategy.
- **Fasttrack the institutionalization and rollout the digital off-budget reporting and tracking tool:** Accelerate the digitalization of the off-budget resource tracking exercise and the development of a virtual pool including linkage to the Aid Management Platform. This will ensure real-time data capture, reduce duplication, and enhance transparency across development partner portfolios.
- **Enhance domestic resource mobilization for health:** Building on the 6% increase in GoU financing, explore innovative financing options such as increasing health taxes, social health insurance contributions, and efficiency gains from inter-governmental fiscal transfers to sustain service delivery.
- **Promote joint monitoring and accountability frameworks:** Institutionalize periodic joint financial and programmatic reviews between MoH, MoFPED, and DPs to assess value for money, track progress against commitments, and harmonize reporting cycles.
- **Enhance communication of financing data and results:** Publish annual off-budget and on-budget financing dashboards and summaries for stakeholders and the public to foster transparency, trust, and mutual accountability.

CHAPTER

3

PERFORMANCE OF LOCAL GOVERNMENTS, HEALTH FACILITIES AND COMMUNITY HEALTH SERVICES

Dr. Diana Atwine Kanzira Permanent Secretary for Uganda's Ministry of Health handovers certificate to a Community Health Health Extension worker in Lwengo district

3.1 NATIONAL AND REGIONAL LEAGUE TABLES

The local government assessment is based on the league table against several selected indicators during FY 2024/2025 there were 145 local governments (Districts and Cities) and Kampala Capital City Authority. This section will show the league performance for all the 145 local governments and KCCA as well as the regional level based on the 15 UBOS sub regions. The municipal council's performance consolidates with the performance of their host district.

3.1.1 The National League Table

The national average score for local government league table increased from 73.6% in the FY 2023/2024 to 76.9 in FY 2024/2025 with 50% of the local governments scoring above the national average of 75.4. Table 56 below shows the total ranking scores by LG in FY 2024/2025. Detailed league table core per indicator is in annex 5.1

Table 68: Local Government Ranking for FY 2024/25

3.1.2 The Regional League Table

The regional league table has been compiled based on UBoS regions (Table 70). The best

performers were Lango (64%), Bugisu (63.4%) and Acholi (63.9%). The worst performers were South Buganda (54.7%), North Buganda (58.9%) and Bunyoro (53.5%).

Table 70: Regional League Table Ranking

Region	Population	Scores				
		2024/25	2023/24	2022/23	2021/22	2020/21
Lango	2,546,118	84.7	69.6	74.7	58.9	64.0
Bugisu	2,205,051	84.2	80.0	76.9	66.0	63.4
Acholi	2,044,355	84.1	72.7	71.7	60.5	63.9
West Nile	4,184,317	79.4	72.5	68.7	51.6	62.1
Kigezi	1,787,231	79.3	80.2	76.5	63.4	66.5

South Buganda	6,425,877	65.2	51.0	57.7	42.6	54.7

3.2 HEALTH FACILITY LEVEL PERFORMANCE

Health Facilities in Uganda are categorized by level of care into Health Centres (Level II, III & IV) and Hospitals (General, Regional Referral, National Referral and Specialized referral Hospitals) and by ownership into Public, Private Not for Profit and Private Health Practitioners. The Health Centres provide primary health care services with Health Centres IIIs providing Basic EmONC services and Health Centre IVs providing comprehensive EmONC services. General Hospitals provide general surgical services in addition to comprehensive EmONC services. The referral Hospitals provide a range of services that also include specialist services.

In 2023 the Health Sub program adopted use of Ambulatory Patient Groups (APGs) and Diagnosis Related Groups (DRGs) to measure the volume of outputs from the outpatient and inpatient services respectively. DRG is a patient classification scheme which provides means of relating the type of inpatients a health facility treats (i.e., its case mix) to the costs incurred by the health facility to treat those patients. They are used to group patient cases with similar clinical conditions and treatment needs into categories or groups to which relative weights are attached.

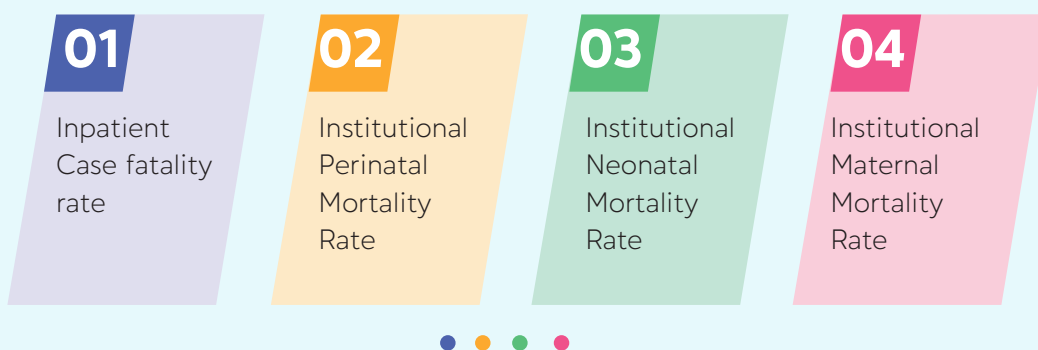

The relative weight considers the principal diagnosis, treatment or procedure received as well as patient characteristics.

APGs are like DRGs but relate to the outpatients managed by the facility. Each outpatient visit is assigned to an Ambulatory Patient Group based on the principal diagnosis, procedure or assessment conducted as well as patient characteristics. Each APG is also assigned a relative weight based on the relative cost of services consumed.

The APGs and DRGs give a more accurate/detailed estimation of the volume or quantity of outputs produced by each health facility when compared to the previously used Standard Unit of Output which never considered the complexity of cases managed by facilities at different levels. The DRGs/APGs were updated during the piloting of the revised private wing guidelines and a new version Uganda DGR/APG Version 2.6 was used. Ranking comparisons of absolute DRG/APG with those from FY 23/24 is therefore not feasible.

Performance of the health facility was also assessed using quality and efficiency indicators.

The quality indicators included.

While the efficiency indicators included.

- 1** Bed Occupancy Rate (BOR)
- 2** Average Length of Stay (ALOS)

The health facility League Tables have been prepared using relative ranking with the best performing hospital on a given indicator given full mark for that indicator and others ranked relative to the best performer. The National and Specialized hospitals are not ranked as they offer very different services.

3.2.1 Health Facility Outputs by Level of Care and Ownership

Table 71 and 72 below show the contribution of APGs and DRGs by level of care and ownership. Health centres provided 92% of the outpatient services and 39 % of the inpatient services. The proportion of services contributed by health centres increased indicating that on average the

population tended to use the PHC facilities as the first point of care.

Public facilities contributed 83% of outpatient services and 73% of inpatient services, remaining the main stay of service provision. However, the limited reporting in the DHIS2 by PHP facilities needs to be taken into consideration especially for outpatient services.

Table 71: APG Contribution by Level of Care and Ownership

		NRH	RRH	GH	HC IV	HC III	HC II	Total	%

3.2.2 Performance of National Referral and Specialised Hospitals

3.2.2.1 APGs and DRGs for National Referral and Specialised Hospitals

National and Specialised Hospitals contributed 18% of the total DRGs and 1% of the APGs. However, Uganda Heart Institute and Uganda Cancer Institute have not been included in

the analysis. Overall, a reduction of 10% in percentage contribution by NRH is noted which could signal increased utilization of lower-level facilities within Kampala metropolitan area.

Table 73: APG & DRGS SCORES for National Referral and Specialised Hospitals FY 2024/25

NR Hospital	No. of Admissions	Total OPD	APGs	DRGs
Butabika	8,543	100,470	65,141	16,288
Naguru	20,204	174,046	84,967	25,039
Kawempe	53,990	63,042	86,249	117,465
Kiruddu	13,878	165,699	64,468	102,593
Mulago	67,041	350,213	144,804	364,172
Mulago SWN	6,118	7,091	43,246	11,232
Total FY 24/35	169,774	860,561	488,876	636,789
Total FY 23/24	164,419	701,543	395,194	535,048

3.2.2.2 Service Quality Outcome at NRHs

The overall in-patient case fatality rate for National Referral and Specialised Hospitals improved from 90/1,000 in FY 23/24 to 47/1000 in FY 24/25 with the range also improving from 10-160/1000 to 9-111/1,000. The low inpatient mortality rate for Butabika is expected given it is a specialised mental health hospital.

Compared to FY 23/24, the average Institutional Perinatal Mortality Rate at this level improved

from 93/1,000 to 84/1,000 and the neonatal mortality rate also improved from 57/1,000 to 49/1,000. The maternal mortality risk at NRHs decreased from 561/100,000 to 152/100,000 live births.

Mulago SWNH continued to have sharp increases in IMMR from 895/100,000 in FY 22/23 to 1456/100,000 in FY 23/24 to 2,217/100,000 live births in FY 24/25 this needs to be further analysed and remedied.

Table 74: Service Quality Assessment for National Referral and Specialised Hospitals FY 2024/25

NR Hospital	Admissions	Deaths	Inpatient Case Fatality Rate	Deliveries	Perinatal death /1000	Neonatal mortality rate	Maternal deaths	IMMR /100,000
Butabika	8,543	74	9	-	-	-	-	-
Naguru	20,204	407	20	8,746	43	24	11	126
Kawempe	53,990	1,496	28	19,305	104	63	105	544
Kiruddu	13,878	1,535	111	-	-	-	-	-
Mulago	67,041	4,274	64	-	-	-	-	-
Mulago SWN	6,118	212	35	1,624	56	22	36	2,217
Total	169,774	7,998	47	29,675	84	49	152	512

3.2.2.3 Bed Occupancy rate (BOR) & Average Length of Stay (ALOS) at NRHs

The average BOR for NRHs increased from 91% to 103% with Butabika, Naguru and Kawempe having BOR above 100% and therefore in need of additional infrastructure. There was no change in the overall ALOS for National Referral and

Specialised hospitals at 6 days. Butabika NMRH continued to have a high ALOS of 52 days, which partly explains its high BOR. Mulago SWNH bed occupancy rate decreased further from 29% to 27%, making the hospital significantly underutilized. The new guidelines for private healthcare services are expected to improve their utilisation.

Table 75: BOR and ALOS for National Referral and Specialised Hospitals in FY 2024/25

NR Hospital	No. of Beds	No. of Admissions	Bed Occupancy Rate	ALOS
Butabika	504	8,543	243	52.4

Mulago	1,188	67,041	54	3.5
Mulago SWN	151	6,118	27	2
Total	2,680	169,774	103	6

3.2.3 Performance of Specialised Health Facilities

3.2.3.1 Uganda Cancer Institute

Cancer Diagnosis and Treatment at the Uganda Cancer Institute, FY 2024/25

During the Financial Year 2024/25, the Uganda Cancer Institute (UCI) registered a total of **8,372** new patients (Table 64). Female patients consistently outnumbered males in all quarters, accounting for approximately **55%** of total new cases. The highest number of new cases were recorded in Q3 (2,228 patients). Cervical and

breast cancers remained the leading diagnoses. A total of **80,438** chemotherapy infusions were administered during the year, averaging approximately **20,110** sessions per quarter. A cumulative total of **68,125** radiotherapy sessions were provided, averaging about **17,031** sessions per quarter.

Table 76: Cancer Diagnosis and Treatment at the Uganda Cancer Institute, FY 2024/25

3.2.3.2 Uganda Heart Institute

During the financial year 2024/25, the Uganda Heart Institute performed a wide range of pediatric and adult closed-heart, open-heart, and vascular (VAS) procedures.

Pediatric cardiac and vascular surgeries

A total of 201 pediatric cardiac and vascular surgeries were performed comprising 77 closed heart (52%), 105 open-heart (38%), and 19

vascular surgeries (10%). The most frequently performed closed-heart operation was Patent Ductus Arteriosus (PDA) repair, accounting for 86% (66/77) of all closed-heart surgeries. Among open-heart surgeries, Ventricular Septal Defect (VSD) closure was the leading procedure, with 55 operations performed, representing more than 50% of all open-heart cases. In the vascular category, AV Fistula Creation was the most common procedure with 9 cases, constituting nearly half (47%) of all VAS operations.

Table 77: Pediatric Cardiac and Vascular Surgical Procedures Performed at the Uganda Heart Institute, FY 2024/2025

Paediatric Cardiac Closed Heart Surgery	Q1	Q2	Q3	Q4	Total

Pediatric cardiac catheterization and interventional procedures

During the financial year 2024/25, the Uganda Heart Institute performed a total of 106 pediatric

cardiac catheterization and interventional procedures. Patent Ductus Arteriosus (PDA) Closure was the most frequently performed intervention, accounting for 56 procedures or approximately 53% of all cases (Table. 66).

Table 78: Paediatric Catheterization Procedures done in FY 2024/2025

Procedures	Q1	Q2	Q3	Q4	Total

Adult cardiac and vascular surgeries

A total of 123 adult cardiac and vascular surgeries were performed comprising 14 closed-heart (11%), 40 open-heart (33%) and 69 vascular surgeries (56%). The most frequently performed closed-heart operation was Pericardiectomy.

Among open-heart surgeries, Mitral Valve Repair was the most frequent procedure, with 26 operations performed. In the vascular category, Venous stripping/Radiocephalic fistula diaphragmatic hernia was the most common procedure with 27 cases (Table. 67)

Table 79: Adult Cardiac and Vascular Surgical Procedures Performed at the Uganda Heart Institute, FY 2024/2025

3.2.3.5 Butabika National Hospital

The hospital recorded a total of 59,931 outpatient department (OPD) visits. **8,544 patients were admitted** during the year, showing that nearly **one in seven OPD clients (14%)** required inpatient management. However, the hospital recorded **1,666 escapes**, equivalent to **about 19% of total admissions**, a major operational and security concern (Table 74).

Table 85: Butabika Hospital Service Utilization Summary

Metric	Total
Total OPD Visits	59,931
Total Admissions	8,544
Total Discharges	5,890
Total Escapes	1,666

Metric	Total
Total Deaths	71
Bed Occupancy (%)	-220%

Patient Days and Bed occupancy

The average bed occupancy rate for the year was approximately 224%, more than double the optimal benchmark of 85% recommended by WHO for efficient hospital operations. The highest occupancy was recorded in May (241%) and February (235%), implying that at these points, more than twice the available beds were in use requiring makeshift arrangements, shared spaces, or delayed discharges. Even the lowest occupancy, recorded in July (205%), was still significantly above normal limits, underscoring persistent congestion (Table 75).

Table 86: Patient Days and Bed Occupancy

Month	Total Patient Days	Bed Occupancy
July	34,916	2.05
August	35,994	2.11
September	34893	2.11
October	37507	2.2
November	38547	2.34
December	37410	2.19
January	38137	2.24
February	36231	2.35
March	37596	2.2
April	37499	2.27
May	40999	2.41
June	37940	2.3

3.2.3.6 Kiruddu National Hospital

Dialysis Services:

Dialysis is a medical procedure that cleans blood for people with kidney failure by using a machine to remove waste, toxins, and excess fluid from the body. The Status of Dialysis services at Kiruddu National Referral hospital is as follows:

- Currently **30** machines running on the dialysis ward and **2** machines in ICU
- We carry out on average **60** Sessions daily
- FY 2024/25 we conducted **19,729** dialysis session.

- The Hospital is spearheading the establishment of satellite dialysis sites in Regional Referrals Including Mbarara RRH, Mbale RRH, Lira RRH, Hoima RRH, Kawempe RRH to reduce on the referrals to Kiruddu NRH from across the country.
- The above satellite dialysis sites are already running and supporting patients in those regions, and we plan on bringing on board the rest of the regional referrals.

Burns and Plastic Surgery:

The Burns and plastic unit are under the Directorate of Surgery, currently located at Kiruddu National Referral Hospital Level 4. It is a specialized unit working as the National burns center in Uganda. The status of Burns and Plastic Surgery at Kiruddu National Referral Hospital is as follows:

- Services Offered at our Burns Centre; OPD, Inpatient burns care, plastic surgery services, HDU, nutrition, Physiotherapy, operating theatre services.
- The department has a total admission capacity of **60** beds.
- The department attended to **1,046** inpatients and **5,173** outpatients in the FY 2024/25.
- The department acts as a training center for burns fellows in Africa.

Diagnostics:

Investigations	Number Administered
Endoscopy	135
ECG/ECHO	4214
CT scans	2560

Laboratory Services:

1. The laboratory administered 448,330 in FY 2024/25
2. SANAS accredited lab effective from 9th January 2023 and it is still being retained to date, and we are in the third assessment.

Accredited tests include:

- Serology (HIV, Crag, SHPA, Hepatitis).
- Micro bacteriology (TB).
- Bacteriology (Culture and Sensitivity – Manual and Automated methods). Note that Kiruddu Lab is among the few labs in Uganda that have accreditation for Bacteriology both manual and automation, and they are only 6 in Uganda).
- This has improved several activities in the hospital including trust in the results

obtained by our labs both at the national and international level.

3.2.3 Performance of RRHs and Large PNFPs

3.2.3.1 Overall Ranking of RRHs and Large PNFPs

Given the similarity of the patient profile in regional referral and large PNFP hospitals, a relative ranking has been produced based on the following parameters:

- Outputs – 60%
- Quality – 20%
- Efficiency – 20%

The best performing hospital for a given indicator was given a maximum score for that indicator and other hospitals scored relative to it. The Hospitals were then ranked relative to their total scores. Mbale RRH with a total score of 67% was the best performing RRH followed by Mengo Hospital 55%.

Honourable Anifah Kawooya Minister for state (General Duties) flags off a Mobile clinic for TB screening

Table 88: Hospital League Table – RRH & Large PNFP

Hospital	Ownership	No. of admissions	Total OPD	No. of deaths	Inpatient Case Fatality Rate (%)	score (max -5)	Total deliveries in the unit	Perinatal death /1000	Score (Max 5)	Neonatal mortality rate	Score (Max - 5)	Maternal deaths	MMR /100,000	Score (Max -5)	Bed Occupancy Rate	Score (max -10)	ALOS	Score (max - 10)	Total APGs	Score (Max -20)	Total DRGs	Score (max - 40)	Total Score (%)

3.2.3.2 APGs and DRGs for RRHs and Large PNFPs

The performance of RRHs and Large PNFP is shown in Table 62 above. Large PNFP included high volume PNFP Hospitals. The Total DRGs score for RRHs & large PNFP Hospitals using the revised version of DRG/APG for Uganda (version 2.6) was 458,511 and the total APG was 961,704 which amounted to 16% and 1% as a share of the volume of services produced nationwide. Mbale RRH continued to have a very high DRGs score which is attributed to the hospital having a higher catchment population serving the regions of Bugisu, Sebei and Bukedi. This calls for efforts to decongest Mbale RRHs by establishing referral hospitals for Bukedi and Sebei regions as well as functionalizing the lower-level health facilities in the region.

3.2.3.3 Service Quality Outcomes at RRHs & Large PNFPs

The overall in-patient case fatality rate for RRHs and large PNFP Hospitals reduced to 4% from 7% in FY 23/24, with a range of 2% to 5%. The overall Institutional Perinatal Mortality rate for RRHs and Large PNFP Hospitals increased to 58/1,000 from 52/1,000 live births, the range also widened from 21– 88/1,000 to 19 – 134/1,000 live births when compared with FY 23/24. Institutional NMR increased from 19/1,000 to 21/1,000 live births last FY, with a range of 3–134/1,000 live births compared to a range of 2–45/1,000 live births for FY 23/24. Overall, the neonatal outcomes at RRH level worsened during FY 24/25

The overall IMMR for RRHs and Large PNFP hospitals improved to 410/100,000 from 432/100,000 live births last financial year. IMMR had a range of 60–821/100,000 compared to 88 to 960/100,000 live births last FY. Mbale RRH continued to have a very high IMMR (821/100,000) which could partly be attributed to the high workload but requires a more detailed assessment before wider conclusions are arrived at including for other RRH that have a higher IMMR than NRHs.

3.2.3.1 BOR and ALOS at RRHs & Large PNFPs

The average BOR at RRHs and Large PNFPs increased to 78% from 73%. Soroti, Lira and Kabale had bed occupancy rates over 100% while Mengo, St Francis Nsambya and Yumbe had bed occupancy rates below 50%. The low bed occupancy rates in large PNFP hospitals may point to financial hardships in accessing health services. The ALOS at this level was 4 days with the highest at Moroto (7 days)

The overall bed occupancy in RRHs is at 71% with Kabale, Soroti and Lira Regional referral hospitals having the highest bed occupancy among RRHs up to over 100%. Yumbe, St. Francis Nsambya and Mengo Hospitals have the least occupancy below 40%. The average length of stay in RRHs and large PNFPs is approximately 4 days per patient.

3.2.4 Performance of the General Hospitals

3.2.4.1 APGs and DRGs for GHs

Relative ranking was also used to rank the performance of General Hospitals using the following parameters: Outputs – 60%, Quality – 20% and Efficiency – 20%. The best performing hospital on a given parameter was given the highest score and the others scored relative to it. The Hospitals were then ranked relative to their total percentage scores.

The top ten and bottom ten hospitals are shown in Table 89 below. Iganga General Hospital was the highest ranked hospital, followed by Luwero General Hospital and Tororo Hospital. Public Hospitals accounted for 6 out of the 10 best performing hospitals due to their high-volume outputs, Employer based PNFP Hospitals also had high volume outputs. Nakasero Hospital, a PHP, was also ranked highly due to a relatively high number of specialized procedures taking place at the hospital. Like last financial year private hospitals dominated the bottom ten ranking mainly because of low volume outputs.

Table 89: Highest and Lowest Ranked General Hospitals

Highest Ranked				Lowest Ranked			
#	Hospital	Ownership	Overall Score	No	Hospital	Ownership	Overall Score
1	Iganga General Hospital	GOV	72	193	Mother Of Mercy Hospital Kyengera Limited	PNFP	15
2	Luwero General Hospital	GOV	65	194	MK International Hospital	PFP	15
3	Tororo General Hospital	GOV	65	195	Women's Hospital International and Fertility Centre	PFP	15
4	Kamuli General Hospital	GOV	62	196	Roswell Women and Children Hospital	PFP	15
5	Lugazi Scoul Hospital	PNFP	62	197	Nkokonjeru Hospital	PNFP	14
6	Kitgum General Hospital	GOV	61	198	St. Francis Nyenga Hospital	PNFP	13
7	Kawolo General Hospital	GOV	58	199	Wynestone Medical centre	PFP	12
8	St. Kizito Matany Hospital	PNFP	58	200	Medi-Pal International Hospital	PFP	12
9	Nakasero Hospital	PFP	57	201	Restoration Gateway Hospital	PNFP	12
10	Kakira Sugar Works Hospital	PNFP	56	202	Jaro Hospital	PFP	9

3.2.4.2 APGs and DRGs for GHs

The Total DRGs from the GHs was 924,628 accounting for 27% of the total DRG output in the country. There was wide variation in total DRGs with Iganga GH producing the highest DRGs with a score of 22,037 DRGs and Jaro Hospital producing the lowest DRGs of 9.

The total APGs from GH was 5,465,128 accounting for 6% of all APGs produced in the country, an increase of 45% from last FY. Mukono General Hospital produced the highest APGs score of 137,627 while the lowest APGs scoring Hospital was Terrowedde Hospital with 47. The performance of all the GHs is shown in Annex 7.3. Non reporting and incomplete reports continued to be a major challenge for general hospitals, especially the PHP hospitals. It is recommended that regular reporting in DHIS-2 be made a requirement for licensing and reports be validated on a regular basis.

3.2.4.3 Service Quality Outcomes at GHs

The overall in-patient case fatality rate for GHs was 1.5%, a 50% improvement when compared to the 3% reported last financial year. Kagando Hospital reported the highest fatality rate of 4.9%. Targeted support supervision will be required to further understand the issue.

The overall IMMR for GH was 131/100,000 an improvement from the 170/100,000 reported last FY. An exceptionally high IMMR of 1,528/100,000 was reported by EDPA Medical Hospital in Hoima and needs to be investigated further. with a range of 0 to 1,361/100,000 live births. Several general hospitals reported higher than average IMMR. The 20 Hospitals with the highest IMMR are shown in table 8 below. Focused technical support supervision to determine the underlying causes is required.

Table 90: General Hospitals with the highest IMMR

Health Facility	Ownership	IMMR
EDPA Medical Hospital	PFP	1528
Jaro Hospital	PFP	1,266
Victory Women's Medical Care	PFP	714
Kumi (Ongino) Hospital	PNFP	683
Mt. St. Mary's Hospital-DOK	PNFP	615
Villa Maria Hospital	PNFP	600
Amudat Hospital	PNFP	588
Ngora Freda Carr Hospital	PNFP	558
UMC Victoria (Naguru) Hospital	PFP	524
St. Mary's Hospital Lacor	PNFP	437
St. Francis Naggalama Hospital	PNFP	436
Kitovu Hospital	PNFP	404
Kamuli Mission Hospital	PNFP	399
Kitgum General Hospital	GOV	377
Comboni Hospital	PNFP	363
St. Joseph's Kitgum Hospital	PNFP	353
St. Paul (Kasese) Hospital	PNFP	332
Double Cure Hospital	PNFP	330
Kamuli General Hospital	GOV	318
Mutolere Hospital	PNFP	316
Mbale People's Hospital	PFP	313

The overall IPMR improved from 35/1,000 live births in FY 23/24 to 33/1000 live births in FY 24/25. Private facilities tended to have higher IPMR despite having fewer deliveries. Targeted technical support supervision is recommended. The INMR also improved from 11/1,000 live births in FY 23/24 to 10/1000 live births in FY 24/25. The unfavorable perinatal indices require further investigation.

3.2.4.4 BOR and ALOS at GHs

The average BOR at GHs was 78% up from 46% while the average length of stay increased from 3 to 6 days. The significant differences appear to be related to data accuracy.

3.2.5 Health Centre IV Performance

Relative ranking was also used to rank the performance of Health Centre IVs using the

following parameters: Outputs – 60%, Quality – 20%, Functionality – 10% and Efficiency – 10%.

Only HC IVs reporting on all parameters were included in the ranking. For the output, quality and efficiency indicators, the best performing HC IV on a given parameter was given the highest (maximum) score and the others scored relative to it. For the functionality indicators (Caesarean Section and Blood Transfusion services) the HC IV was given a score of 5 points if it offered the service and 0 points if it did not offer the service. The HC IVs were then ranked relative to their total percentage scores. Kisenyi HC IV was the best performing HC IV, followed by Bujubuli HC IV and Aboke HC IV.

The best performing HC IVs were high volume HC IVs with high numbers of APGs & DRGs. A list of the highest and lowest ranked HC IVs is shown in table below.

Table 91: Highest and Lowest Ranked Hc Ivs

No.	District	Health Centre IV	Ownership	Total APG	Score (max 20)	Total DRG	Score (Max 40)	Overall Score
Highest Ranked Health Centre IV

291	Kampala District	SAS Clinic	PFP	5	0	-	-	5
292	Mukono District	Gwalibawade	PFP	-	-	1,045	4	4
293	Kampala District	Naguru Police	GOV	9,042	1	-	-	1
294	Katakwi District	Astu	GOV	1,240	0	-	-	0
				2,448,969		644,573		

3.2.5.1 ALOS, BoR, APGs and DRGs for HC IVs

The Total DRGs score from HC IVs was 644,543 accounting for 19% of the total DRGs produced in the country while the total APGs from HC IVs were 2,448,969 accounting for 3% of the total APGs produced in the country. Detailed HC IV rankings are shown annex 7.5

3.2.5.2 Functionality of HC IVs

HC IVs were established to improve access to Comprehensive Emergency Obstetric and Neonatal Care (CEmONC) services. The proportion of HC IVs providing blood transfusion

services decreased slightly from 66.4% to 64.2% while the proportion providing caesarean section services decreased marginally from 83.8% to 83.3%. The trend in functionality of HC IVs over the years is shown in Figure 1 below.

64% of all health centre IVs provided both Blood transfusion and C/S and are hence considered fully functional, while 20% provided C/S without blood transfusion. 2 facilities (1%) provided blood transfusion but no C/S while 16% (46) of the facilities provided neither blood transfusion nor C/S. These were mainly HC IVs that had recently been upgraded from HC IIIs and had not yet acquired the requisite staff.

Figure 63: Trends in Functionality of HC IVs

Functionality of HC IVs in terms of CEmONC and blood transfusion services have stagnated for the last two financial years. Forty-nine (49) HC IVs – 30 GOV, 18 PFP and 1 PNFP facilities never conducted any caesarean section in the FY 2024/25.

Equally, forty-nine (49) HC IVs – 29 GOV, 17 PFP and 01 PNFP facilities never had any blood transfusion in the reporting FY.

3.2.6 Health Centre III & II Performance

The overall performance of HC IIIs and IIs is shown in Table 92. Generally, the government HC IIIs produced more DRGs scores and APGs. However, relatively the contribution of the private HC IIIs and IIs to the DRGs at this level is significant and this can be attributed to private providers providing a wider range of services at this level. There is significant contribution of the public HC IIIs and IIs to the total APGs since they are the majority and they provide free health care.

Table 92: Outputs from Lower-Level Health Facilities

Level	Ownership	No of Facilities	Total OPD	Total Admissions	Total APGs	Total DRGs
Health Centre III	Gov	1,332	17,843,068	946,635	44,215,922	404,600

3.3 COMMUNITY HEALTH SERVICES

The Community Health Workers (CHWs) program has continued to undergo significant restructuring and alignments to ensure that integrated services are provided. The Ministry has prioritized two main cadres at the community level: The Village Health Teams

(VHTs) at the village level and the Community Health Extension Workers (CHEWs) at parish. The Ministry of Health with partners developed the CHW implementation framework, with components focusing on VHT revitalization and roll out of CHEWs.

3.3.1 Village Health Teams

The government and partners continued to equip VHTs with kits and phones to support them as they provide services in the communities. The Ministry of Health with partners also reviewed the training materials to ensure that VHTs receive integrated comprehensive training and refresher courses.

In their respective villages, Village Health Teams (VHTs) conduct reviews of children younger than five years old. These reviews focus on identifying potential danger signs related to common illnesses, verifying their vaccination history and evaluating their nutritional status. In the recent FY 2024/2025, VHTs reported 3.9M assessments of children compared to the average of 4.9M in the previous years. The decline has been attributed to stock out of commodities that demoralize VHTs.

Table 93: Children Assessed by VHTs during the FY 24/25

VHTs refer children seen with danger signs, missed vaccination or malnutrition. The total number of children referred for further care has

declined steadily since FY 2022/2023 as shown below.

Figure 64: Children Referred to by VHTs during FY24/25

VHTs support people with special needs by providing health education and linkage to care. They include all ranges of functional limitations

and in the current FY 2024/2025 they registered and supported over 21,727 persons with special needs as seen below.

Figure 65: People with Special Needs who received Health Education and were linked to care by VHTs

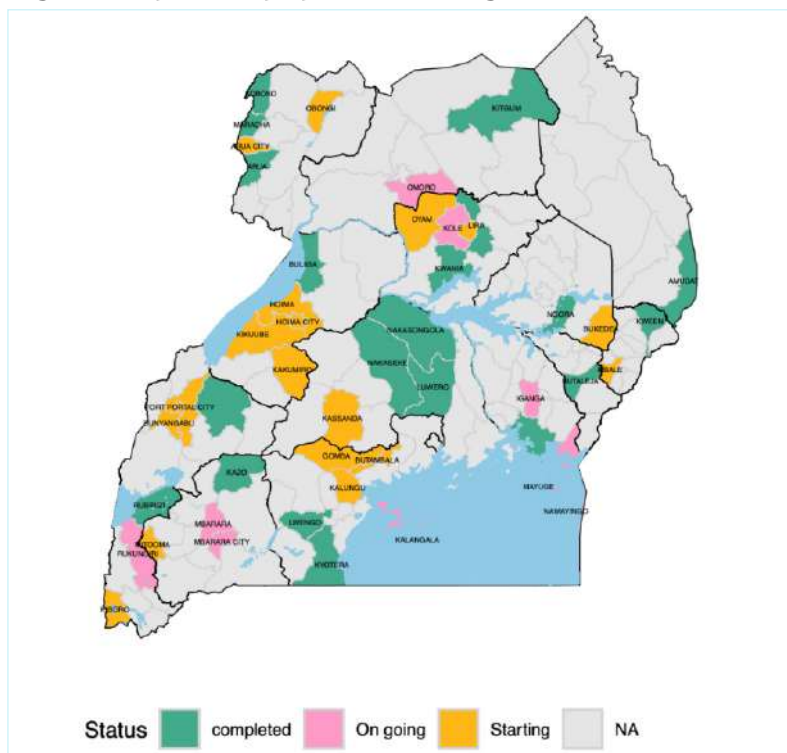

3.3.2 Community Health Extension Workers

The ministry of Health has scaled the CHEWs to additional districts reaching a cumulative total of 3,136 CHEWs in 23 districts who have been trained and equipped and are currently

in the field. The additional districts that have completed training in this FY are: Nakaseke, Rubirizi, Kitgum, Kalangala, Buliisa, Arua District, Amudat, Kwania, Kween, Butaleja, Lwengo, Nakasongola, and Luwero.

Figure 66: Map Showing Status of Scale-Up of the Chews Program

Picture: The Permanent Secretary, Ministry of Health with other Senior members of the Management hand over equipment to the CHEWs in Kyenjojo District

3.3.3 CHEWS Performance

An analysis of the 2024/2025 health outcomes from the routine data reported by health facilities was conducted to assess potential outcomes in the implementation of the CHEWs program.

01

Child Nutrition:

The program seems to be successful in tackling malnutrition. The performance gap in mean malnutrition cases at HC IVs significantly reduced. This might point to possible effectiveness of CHEW-led community screening and health education.

02

OPD attendances:

This trend is most acute at the primary levels. There seems to be reducing OPD attendances in CHEWs implementing districts. This could either be the programs early success in disease prevention or reduction in the uptake of services

03

Malaria Cases:

While malaria cases are declining everywhere, the cases in General Hospitals with CHEWs implementing districts reduced drastically in the current FY 24/25.

Ministry of Health PS Dr Diana Atwine looking at an electronic Medical Records System with workers

Table 94: Comparison of Health Outcomes and Service Uptake in Districts based on CHEWS Implementation

CHAPTER

4

PROGRESS IN IMPLEMENTATION OF THE MOH STRATEGIC PLAN FOR FY 2024/25

*Community Health Extension Workers
Passout event in Lwengo*

4.1 SUMMARY OF PERFORMANCE FOR FY 2024/25

For FY 2024/25, 27 out of the 32 key outcome indicators were assessed and 5 were not assessed due to lack of data. Out of the 27, the sector achieved 25.9% (7/27) compared to 40.8% (11/27) in FY 2023/24; made some progress though did not achieve the annual target for 40.8% (11/27) compared to 25.9% (7/27) the previous year; minimal, no progress or decline in 33.3% (9/27) same as FY 2022/23. This shows some decline in performance over the last year.

Slow progress or non-achievement of some targets was due to low coverage of HIV positive pregnant women initiated on ARVs for EMTCT (91%), HIV exposed infants with first DNA/PCR

test within 2 months (83%), ART Retention rate at 12 months (80%) which declined compared to the previous year due to partner funding shortfalls resulting from the work stop orders that affected access of HIV/Aids commodities and supplies. High numbers of leprosy patients in West Nile & Tooro region due influx of refugees from Congo and South Sudan, stock out of Hep-B vaccines upon roll out of Hep-B birth dose, limited awareness about cancer screening services as well as poorly equipped facilities. Under maternal health services there is late ANC attendance affecting uptake of IPTp, and inadequate supplies for anemia screening during prenatal visits.

Table 95: Summary of Progress for Planned Outputs for FY 2024/25

FY	Achieved		Progress		Not Achieved		Not Assessed
	Number	%	Number	%	Number	%	Number
2024/25	7	25.9%	11	40.8%	9	33.3%	5
2023/24	11	40.8%	7	25.9%	9	33.3%	5
2022/23	11	42%	1	4%	14	54%	6
2021/22	17	63%	6	22%	4	15%	5
2020/21	14	50%	6	21%	8	29%	4

Objective 1:

To strengthen health sector governance, management and coordination for UHC

There are 15 outputs under objective one with 44 performance indicators of which 5 were not planned for assessment this FY. The MoH achieved 77% (30/39) of the performance indicators; made some progress in 10% (4/39) and there was no/or slow progress in 13% (5/39). Reasons for non-achievement include other competing activities affecting holding of governance structure meetings, inadequate funds and delayed initiation of some activities.

Table 96: Progress in Implementation of Strategic Objective 1 of the MOH Strategic Plan

Outputs	Indicators	Performance				Targets	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 1.1 Strengthen governance, management and effectiveness of the health sector at all levels								
1) Governance and management structures reformed and functional	1. Top Management meetings held (%)	25	50	83	60	100	50	The chairperson had other competing priorities.
	2. HPAC meetings held (%)	50	75	100	90	100	83	Only missed 2 meetings in February and May 2025
	3. Senior Management meetings held (%)	92	100	100	92	100	100	SMC meetings are held regular with improved participation of the HoDs
	4. Technical Working Group meetings held (%)	65 (86/132)	100	100	75	100	80	HPAC monitoring TWG performance quarterly with actions to improve performance
	5. Departmental meetings held (%)	70.4 (152/216)	80	80	50	100	95	New departments (HIME and IHRCD) established and yet to meet the standards
Intervention 1.2 Development of Strategic Plan and operational plans								
2) Strategic plans developed	6. MoH 5-year strategic Plan developed		NA	NA	NA	1	1	Could only manage a draft plan due to the delayed release of the approved NDPIV
3) Annual MoH Operational plans developed	7. MoH Annual Workplan compiled timely	Draft	1	1	1	1	1	Always compiled earlier to inform the budgeting process
4) Comprehensive District Health Plans developed (%)	8. Districts with evidence based annual health plans (%)	7.4	41	60	25	55	100	All districts had evidence-based annual health plans although MOH supported a few districts in Buganda, Busoga, Ankole and West Nile regions.
Intervention 1.3 Develop / Review laws, regulations, policies, byelaws and ordinances relevant to health, enact new ones and monitor their implementation								
5) Laws, regulations, policies developed / reviewed	9. Laws, regulations and policies, reviewed / developed (Number)	9	7 (4 Passed & 3 pending presentation)	2	6	5	6	Majority of the Policies, Laws and regulations have been submitted to Cabinet and are pending approvals <ul style="list-style-type: none"> National Health Products Bill developed and approved by Cabinet Human Fertility Bill developed Principles of Specialized Hospitals' Bill developed Principles of the Uganda Health Professionals Bill developed The Principles for the Infection Prevention and Control Bill, developed The National Health Policy Developed and submitted to Cabinet

Outputs	Indicators	Performance					Targets	Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2024/25			
6) Integrated Authority to improve quality assurance and regulatory control systems and accreditation across public and private providers established	10. Joint Health Professionals Authority in place.	0	0	0	Pending	0	1	<ul style="list-style-type: none"> Principles of the Uganda Health Professionals Bill developed pending preparation of the Statement of Financial Implication to MFPEP 	
Intervention 1.4 Development of Standards, guidelines and SOP									
7) Standards, Guidelines and SOPs reviewed / developed, disseminated	11. Standards, guidelines and SOPs reviewed / developed and disseminated (Number)	8	10	10	11	10	12	Standards, guidelines and SOPs inventory to be developed in 2025/26 FY	
Intervention 1.5 Strengthen Supervision and mentorship									
8) Regional Technical Supervisory Structures established to support District Health Service delivery.	12. Regional Supervisory Structures (Number)	4	0	16	16	14	16	All RRRHs involving the PHD are to take lead in implementing support supervision to HC IVs and GHs	
9) Effective supervision and mentorship undertaken	13. Health Sub-programs political Oversight visits undertaken (Number)	6	8	12	6	6	7	Spot checks support supervision visits initiated have improved quality of support supervision	
	14. Quarterly integrated supervision visits undertaken (Number)	2	0	0	2	4	4	Top Management is supportive and was involved Mubende, Teso and Masaka Health Zones	
	15. No. of technical supervision and mentorship visits undertaken	4	4	4	12	12	16	Most MoH Departments undertaking technical support supervision through the RRRHs and reports are shared	

Outputs	Indicators	Performance					Targets	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2024/25			
Intervention 1.6 Strengthen the National Quality Improvement system									
10) Improved quality of care	16. Health providers accreditation mechanism developed	0	0	0	0	N/A	N/A	Still building capacity and shall start with certification	
	17. Laboratories accredited to ISO 15189 standards (Number)	33	48	48	72	50	88	More laboratories were accredited in 2024 that included Yumbe RRH, Arua RRH, Uganda Cancer Institute, Bombo Military, Bududa, Busolwe, & Gomba hospitals.	
	18. Districts undertaking HFQA (%)	100	29	80	100	100	100	HFQAP district score Used to supplement the PHC funding allocation	
Intervention 1.7 Enhance sector monitoring and evaluation									
11) Sector performance monitored and evaluated	19. MoH, and Programs (EPI, TB, HIV & Malaria) with M&E Plans ()	30	45	100	100	100	100	All programs have M&E Plans	
	20. Quarterly MoH performance reports compiled (Number)	4	4	4	4	4	4	All reports were compiled, reviewed and submitted	
	21. MoH quarterly review meetings held (Number)	2	2	4	2	4	4	All mandatory review meeting conducted	
	22. Quarterly budget performance reports submitted (Number)	4	4	4	4	4	4	All budget performance reports submitted	
	23. Annual Health Sector Performance Report compiled and disseminated	1	1	1	1	1	1	Compiled and disseminated at the Annual JRM	
	24. Annual Join Performance Review held and aide memoire disseminated	1	1	1	1	1	1	Annual JRM that was held in November 2024 at Speke Resort hotel Muryonyo	
	25. Mid and end term evaluation of MoH and Strategic plan	NA	NA	Not done	Draft	End term evaluation	Ongoing	The End-term review was initiated late and its still ongoing	

Outputs	Indicators	Performance					Targets	Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2024/25			
Intervention 1.8 Strengthen Data collection, quality and use									
12) Reliable and accurate HIS in place	26. Health Information Strategic Plan developed and disseminated	Draft	1	1	N/A	N/A	N/A	N/A	It was the last year of implementation and an ETR is ongoing
	27. Health workers trained in data analysis and use (Number)	232	66	206	240	150	271	Trained 132 Biostatisticians and HMIS Focal persons from 4 regions of Masaka, Soroti, Jinja and Gulu. Then trained Biostatisticians, DHOs, Specialists and Records officers from the National, regional referral & general hospital host districts	
	28. Availability of HMIS tools at all health facilities (%)	49	62	46	60	80	50	National wide stock out of HMIS tools due to withdraw of most of the partners	
	29. Monthly HMIS reports submitted on time (%)	96	89.2	69	91	100	80.4	The reporting rates have dropped due to the stock out of tools	
	30. Information products developed and shared quarterly	4	4	4	4	4	4	Health statistical abstract is developed and shared quarterly	
	31. Health Facility Atlas developed	Planned for 2021/22	1	1	1	N/A	N/A	Last developed in FY2023/24	
	32. Functionality of the National Health Data Repository (%)	40	70	100	60	100	100	The National Health Data Repository is fully functional	
Intervention 1.9 Resource mobilization and equitable allocation									
13) Equitable resource allocation and efficient utilization	33. Annual MPS, BFP developed and submitted timely (%)	100	100	100	100	100	100	100	This is always developed following the budget call circular
	34. Annual budget tracking and efficiency report produced and disseminated	0	1	1	0	1	0	0	This was not done due to lack of funding
	35. Quarterly financial audits undertaken (Number)	4	4	4	4	4	4	4	These were all undertaken

Outputs	Indicators	Performance					Targets	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2024/25			
Intervention 1.10 Establish and operationalize mechanisms for effective collaboration and partnership for UHC at all levels									
14) Functional multi-sectoral framework, compact and accountability framework developed	36. Multi-sectoral framework, compact and accountability framework developed	Draft	Draft	Draft	Draft	0	1	This was developed and operationalized	
15) Partnerships and multi-sectoral networks established and strengthened	37. PPPH Strategic Plan 2020 – 2030 developed			Draft	Draft	N/A	Draft	The draft was developed by the consultant pending validation and approval processes	
	38. Health Sector Integrated Refugee Response Plan developed	Na	Na	Na	N/A	N/A	Draft	The final draft HSIRRP II has been developed and validated. It is currently ready for approval	
	39. Refugee Health facilities integrated into the District Health System (Number)	15	0	0	0	0	35	All the 35 refugee serving facilities that had been planned for transitioning under DLI 3 were successfully transitioned and are operational	
	40. Reports for monitoring implementation of the Health Sector Integrated Refugee Response plan (Number)	4	4	4	4	4	5	All the targets were achieved as targeted with additional support from UNHCR and UGIFT	
15) Partnerships and multi-sectoral networks established and strengthened	41. Annual stakeholder analysis and mapping undertaken	1	1	1	1	1	0	Not undertaken due to resource constraints	
	42. Stakeholder engagement meetings / workshops held (Number)	8	4	4	6	4	4	All the targets were achieved as targeted mainly through the quarterly TWGs	
	43. Regional and International health partnership meetings attended (Number)	10	4	11	8	4	6	Engagements included those under IGAD, WHO and EAC CoE	
	44. Reports on non-state actor contribution to health system investments (Number)	4	1	0	0	1	1	This is compiled although not comprehensive due to non-declaration from some partners	

Objective 2:

Strengthen human resources for health management and development.

There are 10 key outputs under Objective 2 and 15 performance indicators of which 1 was not planned for assessment this FY. The MoH achieved 86% (12/14) of the indicators, and no progress in 14% (2/14). The reason for non-achievement for the 2 indicators was limited funding for scholarships

and functionalization of the health manpower development centers.

Table 97: Progress in Implementation of Strategic Objective 2 of the MOH Strategic Plan

Outputs	Indicators	Performance				Targets	Performance	Remarks
		2020/21	2021/22	2022/23	FY 2023/24			
Intervention 2.1 Ensure adequate human resources for health at all levels, with special focus on specialized and super specialized HR								
1) HRH Policy and Strategic Plan Developed	1. HRH Policy and Strategic Plan in place	Strategic Plan Developed	N/A	N/A	N/A	N/A	N/A	Already in place
2) Medical Interns deployed	2. Medical interns deployed (Number)	1,400	1,795	1,929	1,974	1,000	1,759	We deployed 1686 fresh medical interns and 73 continuing interns. In total we had 1759 medical interns for cohort 2024/25
3) Salaries paid	3. Salaries paid on time (%)	100	100	100	100	100	100	All Pension and gratuity Payrolls processed and paid on time
4) Pension & Gratuity paid	4. Pension and Gratuity paid (%)	100	100	100	97	100	100	All Pension and gratuity Payrolls processed and paid on time
5) iHRIS functional	5. LGs with up-to-date iHRIS (%)	15	25	141	75	75	141 and 16 RRHs	Currently rolling out new version of iHRIS version 5.0 with 63 districts covered.
6) National Health workforce inventory done	6. National Health Workforce Accounts undertaken	-	-	Draft report	N/A	N/A	1	Undertaken and disseminated in 2024

Outputs	Indicators	Performance				Targets	Performance	Remarks
		2020/21	2021/22	2022/23	FY 2023/24			
7) Schemes of service, standards of practice and job descriptions developed for Allied Health Professional cadres	7. Health cadres with Up-to-date schemes of service and standards of practice and job descriptions	50	50	100	100	100	100	Compendium of Job descriptions and person specifications for health facilities June 2024 by the Ministry of Public Service in place
8) Multi-sectoral planning for training of health workforce in appropriate skills and numbers	8. MS Committee meetings attended (%)	100	100	70	25	100	100	Several multi-sectoral planning for training of health workforce in appropriate skills and numbers was conducted e.g. inter-ministerial meetings, MOES etc.
Intervention 2.2 Improve performance management, monitoring and reporting								
9) Improved health worker performance and attendance to duty	9. E-personnel performance management, monitoring and reporting system developed	Under development	1 (Design phase for scale up)	Concept in place	Bio-metric & iHRIS rolled out	Implementation	Implementation	MoH bio-Metrix attendance system at MOH, 2 NRHs, and 16 RRHs.
Intervention 2.3 Undertake continuous training and capacity building for health workers								
10) Continuous Professional Development and training undertaken	10. Annual Training plans based on the TNA	1	1	1	0	1	1	Annual Training plans based on the TNA were e.g., TNA was conducted in Karamoja and Yumbe for training specialists and super specialists to manage Non communicable diseases.

Outputs	Indicators	Performance					Targets	Performance	Remarks
		2020/21	2021/22	2022/23	FY 2023/24	FY 2024/25			
	11. In-service training curriculum and materials in place	1	1	NA	3 Drafts	-	4	4 Guidelines are being developed: <ul style="list-style-type: none"> • Staff professional development guidelines • Content development guideline for Inservice training • Guidelines for implementing Health Labour Market Analysis • Curriculum Review for Diploma in Environmental Sciences and diploma in medical Laboratory and Bachelors in Medical Education, Diploma Nursing and Diploma Psychiatric Nursing 	
	12. Staff on in-service training (Number)	622	400	5,960	130	20	3000	Several in-service training programs in community health, immunization, HRH IHRIS, among others	
	13. Scholarships awarded (Number)	432	65	0	16	100	16	10 scholarships awarded in emergency medicine; 6 scholarships awarded in surgery	
	14. Health Manpower Development Centre functional and regional hubs functional	1	1	1	1	6	1	Only one HMDC, Mbale which plays a co-ordination role for partner activities, but it is not functional as a centre because there is no operational budget and lacks staffing. Regional hubs established in Arua, Fort Portal and Moroto with support from Enabel but they are not functional	
	15. Training database updated	1	1	1	1	1	1	E- learning platform being updated with content in 7-17 surveillance, Tuberculosis content.	

Objective 3:

Increase access to nationally coordinated services for communicable and non-communicable disease / conditions prevention and control.

There are 28 key outputs and 85 output performance indicators under objective 3, however 16 of the output indicators were not for assessment in the last year under review, and there was no source of data for 2 indicators leaving 69 indicators for assessment. The MoH achieved 64% (44/69) of the targets, made some remarkable progress in 16% (11/69), no progress or decline 20% (14/69).

Table 98: Progress in Implementation of Strategic Objective 3 of the MOH Strategic Plan

Outputs	Indicators	Performance				Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 3.1 Revitalize public health inspection in collaboration with other MDAs to accelerate WASH (rural and urban) improvement.								
1) Environmental Health Sanitation & Hygiene (EHS&H) Strategic Plan developed	1. EHS&H Strategic Plan disseminated and implemented	Draft	Draft	Draft	Draft	0	Final Draft	Draft National EH Strategy has been submitted for approval
2) Functional Sanitation and Hygiene Working Group	2. Sanitation and Hygiene Working Group meetings held (Number)	9	11	5	6	4	4	1 meeting was held in each quarter
Intervention 3.2 Increase access to inclusive safe water, sanitation and hygiene (WASH) with emphasis on increasing coverage of improved toilet facilities and handwashing practices								
3) Increased access to inclusive sanitation and hygiene services in rural areas	3. LGs engaged on the KDS (%)	48	0	100	0	100	0	KDS is no longer being tracked. Priorities are being aligned to NDP IV. Priority is now engaging LGs on KPIs for EH staff
	4. Sanitation week commemorated nationally	1	1	1	1	1	1	This is actively conducted
	5. SCs holding annual sanitation week (%)	No data	0	100	No data	30	No Data	No data available
Intervention 3.3 Improved monitoring of hygiene and sanitation								
4) Functional Hygiene & Sanitation MIS	6. MIS for hygiene and sanitation established	Under development	Not planned	Still under development	Not operational	MIS	1	Integration with eCHIS was finalized. Live data from eCHIS is being received by MIS

Outputs	Indicators	Performance				Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 3.4 Strengthen the Community Health program								
5) Intersectoral Community Health Programs in place	7. Community Health Strategy developed and disseminated	Draft	Draft	Finalised and launched	N/A	N/A	N/A	Approved and disseminated in FY 2022/23
6) CHEWs operational	8. CHEW policy and strategy approved and operationalized	Piloting		Piloting in Malye and Lira	Pilot on-going	Implementation	Implementation	The policy is not yet approved but MOH is implementing the CHEWs program. Trained, equipped and deployed 3,136 CHEWs to manage 1,568 parishes in 23 districts. Currently training 792 CHEWs to be deployed in manage 396 parishes in 7 districts. Revised VHT guidelines already in use
7) Functional VHTs	9. Revised VHT guidelines provide for youth inclusion with emphasis on gender	Not planned	Not planned	1	1	1	1	
	10. Trained and tooled VHTs (Number)	14,177	250	1,270	5,329	10,000	1,203	1,203 VHTs were trained and tooled across 21 districts
Intervention 3.5 Intensify advocacy, communication and social mobilization for increased awareness and positive behaviour change for all health interventions								
8) Integrated Health Education and Promotion program in place	11. Integrated Health Communication Strategy developed and disseminated	1	Strategy developed and implementation ongoing	Already in place	N/A	N/A	N/A	Already in place
9) IEC materials developed and disseminated	12. IEC materials developed / revised (Number)	10	504	2,345	2,453	500	5,456	IEC Materials were developed and approved for dissemination to support health outcomes for Malaria, HIV/AIDs, Reproductive Health, Nutrition, Public Health Emergencies, NCDs, TB and Leprosy among others.

Outputs	Indicators	Performance				Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24			
10) Increased health literacy and utilization of health services	13. Community engagement / mobilization activities through various means (mass media, campaigns, social media, etc) (Number)	>48	84	>100	158	100	221	With support from Partners: WHO, UNICEF, PATH, AMREF Health Africa, IoM, Water Aid
Intervention 3.6 Improve nutrition and food safety with emphasis on children aged under 5, school children, adolescents, pregnant and lactating women and vulnerable groups								
11) Standards & guidelines for childcare facilities in place	14. Standards & guidelines for childcare facilities developed	1	NA – Guidelines in place	Draft	Draft	1	Draft Guideline	Awaiting approval of the Employment Bill 2022 to be finalized
12) Breast Feeding/ baby care corners in health institutions established	15. Workplaces with breastfeeding corners (%)	2	3	No data	3	25	6	Implemented in collaboration with MoGLSD. World Vision Head office, WYU-Kibaale Office, NMS-Kajjansi, Busega, Wandegeya and Nakawa Markets
13) Breast-feeding week commemorated	16. Annual BF week commemorated	1	1	1	1	1	1	Held in August, 2024
14) Code of marketing breast milk substitutes adhered to	17. Commercial outlets and health facilities monitored conforming to the code of marketing (%)	20	0	0	0	40	37	Code Monitoring, compliance and enforcement activities are conducted to Protect, Promote, & Support optimal Infant & Young Child Feeding; This was only conducted in health facilities. Commercial outlets not covered due to inadequate funding

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2023/24			
15) Nutritious meals provided at schools	18. Schools (primary and secondary) visited and sensitized to ensure provision of safe and fortified foods to children (Number)	10	0	0	68	30	50	Held a workshop targeting 50 school management committees and the local counsel, to improve school feeding menus and diet of school age children. (Nakasero Primary school, Kiswa primary school)	
16) National food fortification policy and law developed	19. National food fortification policy and law in place	0	0	0	0	N/A	1	Not relevant, as it is catered for the National Food and Fortification Policy under MAAIF Different MDA have their different rolls on this policy framework Standards and Regulation related on food fortification policy has been developed, reviewed and harmonized at national, regional and international level as need arose	
17) Hunger and malnutrition reduced	20. Regulations on sweetened beverages and alcohol developed	RIA ongoing	1 In final stages	Draft	Draft	1	1	Nutriments profile model to guide the implementation of related regulation has been developed	
Intervention 3.7 Increase access to immunization against childhood diseases									
18) Target population fully immunized	21. New vaccines introduced (Number)	To be introduced in 2022/23	To be introduced in 2022/23	3	Introduced HepB birth dose and IPV2	0	1	Malaria vaccine introduced in April 2025	
	22. Yellow Fever Vaccination Campaigns (%)	Scheduled for 2022/23	Scheduled for 2022/23	70.5	75%	1	1	Achieved 92% in phase 3a due to strong mobilization and coordination	
	23. Measles campaigns and SIAs conducted (Number)	Not planned for this year	Due 2022/23	98	1	N/A	N/A	Planned for 2026	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
Intervention 3.8 Reduce the burden of communicable diseases with focus on high burden diseases (Malaria, HIV/AIDS, TB, NTDs, Hepatitis B, epidemic prone diseases and malnutrition across all age groups emphasizing PHC approach)									
19) Reduced morbidity and mortality due to malaria	24. Uganda Malaria Reduction and Elimination Strategic Plan 2020 - 25 finalized and disseminated	Draft	Draft	Draft	Draft	Draft	-	1	Uganda Malaria Reduction and Elimination Strategic Plan 2020 - 25 was developed but was not approved by Top Management NMED is currently developing a new Malaria Elimination Strategic plan for the period 2026 -2030
	25. Mass LLIN campaigns held (Number)	1 27.4 million LLINs were distributed covering 98% (11,394,589) households.	Not planned for this year	1	1	N/A	N/A	N/A	Mass LLIN campaigns are done every after 3 years the next campaign is planned for 2026.
	26. National Malaria Days held with mass IPT for malaria (Number)	1	1 SMC conducted in Kotido and Moroto	2	1	2	2	2	World Malaria Day was commemorated in Gulu City district in April 2025. Also, the Malaria vaccine was launched in Apac district in April 2025.
	27. Health workers in the public and private sector trained in integrated management of malaria (Number)	2,116	3,843	660	1,367	500	797	797	A total of 797 participants from 35 districts were trained in the period January - June, of these 442 (55%) were from the private sector. There were no further trainings conducted in the last semester of FY 2024_2025. Facility based mentorships were carried out where a total of 300 health workers were mentored.

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2023/24			
20) Reduced morbidity and mortality due to HIV/AIDS	28. Develop HIV/AIDS 5-year Strategic plan	Not planned	Not planned	Not Planned	N/A	N/A	Draft	Draft strategic plan available – Not yet finalized	
	29. HIV prevention interventions including IEC materials developed (Number)	10	9	7	9	5	5	(1) Condom promotional campaign "Get it on, stay safe"; (2) Branding of the public sector condoms "shield"; (3) GBV campaign during the "26 days of activism" (4) PrEP Awareness campaign (5) HIV prevention, care & treatment messages	
	30. Condoms procured and distributed (Number)	345 million	192 million	141 million	123,593,368	433 million	149,588,400	The 30% under achievement was due over-estimated target and inconsistent funding towards the last mile delivery of condoms to community hotspot through the alternative distribution mechanism implemented by the Joint medical stores (JMS). Going forward 3% last mile distribution costs have been institutionalized.	
	31. HIV test kits procured and distributed (Number)	5.732 million	9.1 million	13 million	9,093,940	3.9 million	8,769,745	Under estimation of the target (220%)	
	32. High risk population receiving PrEP and PEP (%)	No data	No data	98	85%	95	67%	Of the total of 1,023,899 populations at higher risk for HIV received HIV prevention services during the reporting period, of these 688,214 were initiated on PrEP, received a PrEP refill or were re-initiated on PrEP.	

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2023/24			
21) Reduced morbidity and mortality due to TB/Leprosy	33. Priority programs integrating HIV care and treatment (TB, Nutrition, Family Planning, Cancer of the cervix screening, Hepatitis B & C screening, HPV Vaccination for girls, Sexual and Reproductive Health, SGBV) (%)	100	100	100	100	100	100		
	34. Service providers trained to manage SGBV cases, deliver integrated youth-friendly HIV, SRH services (Number)	350	269	226	290	250	160	A total of 160 health workers from 80 district stakeholders were trained on the GBV referral pathway	
	35. TB/L National Strategic Plan in place	1	NA	N/A	N/A	N/A	N/A	Mid-term review and End Term review for the NSP 2020/21 – 2024/25 were concluded. Draft Strategic Plan 2025/26 has been developed pending joint stakeholders' validation and dissemination.	
	36. Advocacy and Community engagement activities on TB	6	14	14	23	12	15	Advocacy and community engagement activities included: Regional mobile drives & digital film van activations, Community & school sensitization drives, Mass & social media campaigns, and national commemorations-World TB & Leprosy Days.	
	37. Facilities (HC IVs and IIs) with diagnostics for TB (%)	83	100	688	100%	90	100%	All facilities (HCIVs and IIs) have diagnostics for TB for at least Microscopy. (A total of 57 facilities received GeneXpert machines for molecular diagnostics during the FY 2024/25).	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	38. Health workers trained in TB Preventive therapy for contacts (Number)	0	580	580	28,565	400	639	The health workers were trained in TB preventive therapy as well as Infection and Prevention Control.	
	39. MDR-TB initiating Hospitals (Number)	17	17	18	22	20	22	Four newly accredited sites during the FY i.e. Tororo General Hospital and Apac General Hospital, Yumbe RRH and Kayunga RRH	
22) Reduced morbidity and mortality due to NTDs in all affected districts in Uganda to a level where they will no longer be of public health importance by 2025	40. NTDs mapped to determine endemicity (%)	0	83	9	10	20	20	Achieved and fully completed	
	41. Endemic districts (90) achieving elimination of schistosomiasis (%)	0	0	0	5	16	0	122,926 people received Mass drug administration treatments during FY 2023/24 in 12 districts Schistosomiasis is still endemic in all 90 districts with varying prevalence levels and more treatment rounds are still required to achieve elimination. Impact surveys are also required post treatment to ascertain the endemicity status	
	42. High transmission Districts implementing Indoor Residual Spraying (IRS) (%)	32	0	17	37	100	36	IRS is targeted for only high burden regions/districts. we had targeted 55 districts but coz of limited funds we are only implementing in 20 districts	
	43. Local Governments undertaking malaria Larval Source Management (Number)	4	4	11	11	15	12	Larviciding interventions have been scaled up to include Katakwi district with larval source management in high malaria endemic sub counties	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	44. Case management centres active for HAT (sleeping sickness) diagnosis in endemic districts (Number)	43	11	14	10	43	43	All HAT centers have conducted both Active and passive routine case search for suspected sleeping sickness cases No reported case and the country is still free from the HAT gambiense	
Intervention 3.9 Prevent and control NCDs									
23) Reduced NCDs	45. Multi-sectoral NCD Strategic plan developed		Draft	Draft not yet approved	0	N/A	N/A	Update/ review process stalled due to consultancy issues	
	46. NCD days commemorated (Sickle cell, Mental health, diabetes) (Number)	5	6	6	3	3	3	World Diabetes Day commemorated in Kabale District, Sickle Cell disease day in Lira, Mental health symposium held in Kampala	
	47. Media campaigns (monthly) (Number)	12	0	3	13	12	3	Lack of dedicated financing for the media campaigns	
	48. Trainers trained in cervical cancer screening using HPV DNA testing and Pap smears (Number)	32	30	30	190	0	2	Achieved only in project districts of Kampala, Mbarara and Mbarara city with support from KOFIH (CANCAPUG)	
	49. Health workers trained to risk screen for major NCDs like other cancers, CVDs, DM (Number)	2,022	0	72	No data	200	2400	Trained with support from WDF/WHO DI- Card project and resolve to save lives	
	50. Legislation developed to ban use of trans fats in the food-chain	Not planned this year	Not planned this year	0	0	N/A	N/A	Still in preliminary stages NO draft bill.	
	51. Salt consumption monitored through survey e.g UDHS, STEPS	Not planned this year	To be undertaken as part of the UDHS 2022	Awaiting UDHS findings	1	1	1	98.8% households with iodised salt (UDHS 2022)	

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2023/24			
	52. National Physical exercise day in place	0	0	1	1	1	1	Commemorated July 2024	
	53. Public workplaces with physical exercise initiatives (Number)	0	105	105	No data	220	No data		
	Intervention 3.10 Strengthen an emergency medical service and referral system								
24) Nationally coordinated ambulance service and referral system in place	54. National Emergency Medical Services Policy and Strategic Plan in place.	1	Approved by Cabinet and launched on 18 th November 2021	Not Planned	N/A	N/A	N/A		
	55. Regional Ambulance Hubs established (Number)	2	2	2	0	2	4	Masaka, Naguru, Mulago, and Yumbe hubs are already established. In addition, four regional hubs--Arua, Mbarara, Mbale, and Lira are currently under construction with support from UCREEP and Enabel.	
	56. Ambulances procured (Number)	116	12	62	111	50	102	Government of Japan (25 Type B), GF (33 Type B and 4 Type C) and UCREEP 34 Type B and 6 Type C.	
	57. EMS cadre trained (in-service) (Number)	460	4,438	3,654	442	400	534	Training was supported by GOU	
	58. Referral guidelines disseminated	Finalized	Na	Not planned	N/A	N/A	N/A		
	59. RRHs with functional ICUs & HDUs (Number)	14	16	16	16	18	18	All RRHs have functional ICUs/ HDUs	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
25) Reduced maternal, neonatal and child mortality	Intervention 3.11 Improve maternal, neonatal and child health services at all levels of care								
	60. Costed RMNCAH roadmap 2020 - 25 disseminated	Draft	1		Not planned	N/A	N/A	N/A	Sharpened Plan and Investment Case II 2022/23-2026/27 developed, and a national dissemination done in Oct 2023.
	61. RMNCAH Parliamentary Forum Advocacy meetings for increased financing for RMNCAH (Number)	0	1	1	4	4	4	3	These were held during the Safe Motherhood events and provided a platform to discuss increased financing for RMNCAH, as well as to advance dialogue on self-care.
	62. Primary Health workers trained in New-born Care (Number)	150	600	600	315	300	300	280	The target had been set with USAID funding expected to support wider coverage; however, some planned regional training/mentorships were not undertaken due to funding cutoffs. Current coverage was sustained through support from ELMA, Baylor, BAMA, Seed Global Health, and the Government of Uganda.
63. MCH Guidelines, SOPs/manuals developed	3	3	7	4	2	2	5	DICAH Implementation guideline (2024) – Approved Operational guidelines on prevention and control of mpox in schools (Approved) 2-Year ADH Costed Implementation Plan (Approved) School feeding Menu (Draft) Guidelines on School-Health Facility Linkages (Draft)	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	64. Districts implementing Integrated Community Case Management (iCCM) strategy (%)	59	53	82	60	90	81	Currently, 81 districts are fully implementing the iCCM strategy. Of these, 67 are supported by the Global Fund, while implementation in 14 districts previously supported by the Presidential Malaria Initiative was halted due to the stop-work directive. Efforts are underway to transition 10 of these districts into Global Fund support, while the remaining 4 will continue under UHA.	
Intervention 3.12 Improve adolescent health services									
26) Reduced teenage pregnancies	65. Health workers re-oriented in Adolescent and youth friendly Health services (Number)	343	700	700	660	400	1,068	The over-achievement was due to the use of cost-effective approaches such as onsite trainings, and leveraging integration with other programmes, including HIV and HPV vaccination activities, which increased the number of health workers reached.	
	66. Adolescent Health Policy developed and disseminated	Draft	Draft	Draft	N/A	N/A	N/A	Adolescent health policy issues merged into the national health policy. To develop Adolescent Health Implementation Guidelines	
Intervention 3.13 Increase access to Sexual and Reproductive health Services with special focus on Family Planning and age-appropriate information									
27) Improved Sexual and Reproductive Health	67. FP Implementation Plan developed	Draft	1	Not planned	N/A	N/A	N/A	Achieved in 2021/22	
	68. SRH&R Strategic Plan disseminated	Draft	Dissemination	Not planned	0	N/A	N/A		
	69. Health workers trained in FP counselling and provision (Number)	240	500	652	252	300	280	The target was set based on the availability of USAID funds. However, the achievement fell short due to funding cutoffs that led to the discontinuation of support in some districts.	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	70. Obstetric fistula camps organized (Number)	22	12	12	24	2	8	Conducted 8 outreach repair camps in Mbarara RRH, Hoima RRH, Mbale RRH, Kitovu Hospital achieving 1,792 repairs	
	71. Districts with District Male Engagement Plans (%)	0	30	30	25	100	25	This is not a well conceptualized initiative at local government level	
Intervention 3.14 Improve the National Health Laboratory Services									
28) Increased access to quality laboratory services	72. National Laboratory Services Strategic Plan developed	1	1	Done	NA	NA	NA	Achieved in FY 2022/23	
	73. Standards, guidelines, manuals and SOPs developed and disseminated (Number)	6	2	2	0	2	7	7 documents have been passed by the Laboratory Technical Committee (LTC) and cleared for presentation to MoH top management for approval, whilst one is under development. The documents passed by LTC include the BSBS Training Curriculum, the BRM Mentorship Guide, and the Laboratory Infrastructure and Assessment Checklist. Others include: the National Laboratory Standards and the Multi-Disease Guidelines. The NHLDS Strategic Plan remains under development.	
	74. Test Menu reviewed and disseminated	1	0	0	NA	1	0	This is scheduled for the FY 2025/26 period	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	75. Updated Lab supplies List	1 Version 2020	To be reviewed and updated in the FY22/23	0	NA	1	0	This is scheduled for the FY 2025/26 period	
	76. Annual quantification done	1	1	1	1	1	1	Quantification was held for HIV, Hepatitis B&C, and related laboratory commodities	
	77. National database of all laboratories in the country showing capacities, location and affiliation.	Not planned	Scheduled for implementation in FY 2022 / 2023.	0	0	1	0	This activity was not implemented due to lack of funding.	
	78. Lab PPP strategies established (Number)	0	Scheduled for implementation in FY 2022 / 2023.	2	0	5	0		
	79. Laboratory infrastructure improved (Number)	4 Bundi-bugyo, Kayunga, Kawolo & Yumbe	No data	13	2	16	37	Infrastructural improvements included the installation of new air conditioning systems at five sites, the construction of five new laboratories at Amudat Hospital, Atutur Hospital, Kaberamaido General Hospital, and Serere General Hospital, and renovations of two laboratories at Kaabong and Busolve General Hospitals. Additionally, solar systems were installed in 30 sites	
	80. Hubs equipped (Biosafety Cabinets, waste treatment autoclaves, cold storage facilities, etc) (Number)	4 Bundi-bugyo, Kayunga, Kawolo & Yumbe	No data	89	100	40	100	All 100 lab hubs were equipped with cold storage facilities, the credo boxes, which supports sample movement between the peripheral facilities (on bikes) to the hubs. Centrifuges and Fridges were distributed in 44 health facilities.	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
	81. ToT for laboratory SPARS done	1	1	1	1	N/A	N/A	This activity was completed in the FY23/24 period	
	82. Annual refresher training on use of Laboratory Web based ordering system (Number)	1	Scheduled for implementation in FY 2022 / 2023.	0	22	1	0	This activity was completed in the FY23/24 period	
	83. Laboratories mentored on ISO implementation (Number)	10	23	25	4	35	132	The overachievement was driven by expanding the training to lower-level facilities, rather than limiting it to national-level sessions. A total of 132 health facilities were trained through regional IP-led sessions, covering 81 districts.	
	84. Mentorship visits to facilities implementing for laboratory SPARS (quarterly) (Number)	2	4	4	4	4	4	79% of the laboratories visited received LabSPARS mentorship at least five times, the minimum threshold at which measurable performance improvement is expected. Overall, a 17% improvement in performance was observed across health facilities, with the most significant gains recorded in storage management, ordering, receipt and recording, and laboratory equipment management.	
	85. Regional DQAs for national and sub national databases and information systems (Number)	1	0	0	1	4	0	This activity was not allocated a budget, which limited the department's capacity to verify the accuracy of reporting for some key KPIs. Certain indicators, such as GF-funded reporting on Malaria, HIV, and TB test volumes, as well as HIV EID service coverage, have been flagged as potentially inaccurate.	

Objective 4:

Strengthen disease surveillance, epidemic control and disaster preparedness and response at national and sub-national.

There are 5 key outputs and 15 performance indicators under objective 4 of which 1 was not planned for assessment this FY. The MoH achieved 72% (10/14), made some remarkable progress in 21% (3/14), and little progress or no achievement for 7% (1/14) of the performance indicators for the year.

Table 99: Progress in Implementation of Strategic Objective 4 of the MOH Strategic Plan

Outputs	Indicators	Performance			Target		Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 4.1 Develop national capacity for integrated disease surveillance and management of national and global health risks.								
1) Epidemic diseases timely detected and controlled	1. IES&PHE Strategic Plan developed	Draft	Draft	Draft	Draft	-	N/A	
	2. Districts where revised IDSR Guidelines Version 3 rolled out (Number)	Tot for National train-ers conducted	41	120	39	135	136	The remaining 9 districts where IDSR has not been rolled out include Nwoya, Kiruhura, Kalangala, Nkaseke, Nakasongola, Kiboga, Kyakwanzi, Luwero & Mityana
	3. Districts using revised IDSR Guidelines Version 3 to detect early and report Public Health threats within 24 Hours (Number)	0	41	120	39	146	146	All districts using IDSR guidelines only that the 9 districts where 3rd Edition of IDSR guidelines haven't been rolled out are using the 2nd Edition of IDSR guidelines to detect and report PHEs.
	4. Integrated sentinel surveillance sites established (Number)	Not planned	23	8	20 (7 RRHs, 3 GHs, 10 HCIVs)	10 HC Ills & border points	0	Lack of funds to establish sentinel surveillance sites as planned

Outputs	Indicators	Performance					Target	Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2024/25			
	5. Districts supported in early reporting of priority diseases (Number)	135	109	118	11	32	33	Supported 33 districts on Weekly surveillance reporting and mTrac use in of Rubanda, Kisoro, Rukungiri, Kasese, Kyegegwa, kyenjojo, Mbarara, Buhweju, Kazo, Kayunga, Buikwe, Mukono, Busia, Tororo, Namisindwa, Ngora, Soroti District, Soroti City, Luuka, Jinja City, Jinja District, Arua, Adjumani, Obongi, Butambala, Gomba, Lwengo, Bullisa, Hoima City, Hoima district, Mubende, Kassanda and Mityana.	
	6. LGs trained to prepare and respond to PHEs (Number)	135	25	64	67	30	84	Trained, Formulated and functionalized DOH teams in 13 high-risk districts, 54 districts on Community based surveillance (CBS) guidelines, 17 Districts trainings for health workers in RRHs, PNFPs & PFPs on IDSR 3rd Edition guidelines in	
	7. LGs affected by major PHEs supported (Number)	135	15	25	30	15	146	The 146 districts include; Sudan Ebola Virus (SVD) in 10 districts of; Mbale, Kampala, Wakiso, Jinja, Iganga, Budaka, Mbale, Kwen, Mubende and Kakumiro, Mpox in 118 districts of 118 districts those reported many Mpox cases include; Kampala, Nakasongola, Mbarara, Wakiso, Luwero, Mayuge and Mukono, Mayuge, Kabale, Kanungu, Mbarara city, Rwampala, Kiruhura, Masaka, Kyotera, Mbale city cholera outbreak in 2 districts of Adjumani, Moyo and Lamwo, CCHF in Kyenjojo, Mubende and asindi, then Rabies in Katakwi, RVF in 2 districts of Mubende and Kyegegwa	

Outputs	Indicators	Performance				Target		Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2023/24			
2) Zoonotic diseases prevented, detected, responded and controlled	8. DHT Trained (%)	4.4	20	10	8	40	67	And Anthrax in 6 districts of Sheema, Bushenyi, Kasese, Kween, Sembabule and Amudat, Food poisoning in 4 districts of Amuru, Kotido, Nakapiripit and Kole, Measles in 22 districts. Trained, Formulated and functionalized DOH teams in 13 high-risk districts, 54 districts on Community based surveillance (CBS) guidelines	
	9. Ministries departments and agencies handling zoonotic diseases (%)	75	75	19	85	90	95	MoH, MAAIF, MWE, UWA, TDDA, USAID, SBCC, AFROHUN, CSOs, BUILD UGANDA-ILIRI, MoA, DGAL, WHO, President's Office, FAO, RESOLVE-IDI, IDI-GHS, OPM	
3) Functional National and District One Health teams in place.	10. Sectors and disciplines participating in One Health issues (%)	42	50	19	85	98	95	MoH, MAAIF, MWE, UWA, TDDA, USAID, SBCC, AFROHUN, CSOs, BUILD UGANDA-ILIRI, MoA, DGAL, WHO, President's Office, FAO, RESOLVE-IDI, IDI-GHS, OPM	
	11. Planning meetings held (Number)	20	20	4	5	60	32	21 NTF coordination meetings, 7 for AAR, 4 coordination meeting with IPs. The challenge of not achieving the target is over-rapping activities as teams were engaged in PHE response activities	
	12. Strategies developed at the national and district level (Number)	3	8	8	2	5	8	These included: The National Cholera Technical Guidelines, The National Action Plan for Health Security II (NAPHS II 2024/25 – 2028/29), Early After-action Reviews (EAR) guidelines, The REOC Mpoax operational plan, a SIMEX tool kit for Marburg, IDSR Clinical guidelines, Mpoax preparedness and Response plan,	

Outputs	Indicators	Performance					Target	Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2024/25			
Intervention 4.2 Strengthen the disaster and Public Health Emergency coordination mechanisms at regional to inform disaster response									
4) Functional coordination mechanisms at regional level to inform pandemic / epidemic response	13. Global and regional protocols agreed and signed by the governments, to respond to global pandemics (Number).	2	1	3	3	3	2	3	IGAD cross border surveillance, EAC treaty, OSBP Act
	14. Regional and cross-border meetings held (Number)	4	2	11	6	4	2	2	These include cross-border meeting between South Sudan and DRC, joint cross-border training for Uganda and South Sudan
5) Community-level awareness, preparedness and response strengthened	15. ToT and refreshers for capacity building for community-level awareness, preparedness and response (Number)	135	146	146	146	146	146	146	These include 54 districts on Community based surveillance (CBS) guidelines, 10 in SVD preparedness and response, 118 on mpox preparedness and response

Objective 5:

Improve functionality and adequacy of health infrastructure and logistics.

There are 8 outputs and 24 performance indicators under objective 5. The MoH achieved 90% (18/20) and made some remarkable progress in 10% (2/20). Four (4) of the indicators were not planned for assessment this FY.

Table 100: Progress in Implementation of Strategic Objective 5 of the MOH Strategic Plan

Outputs	Indicators	Performance				Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 5.1 Develop and upgrade health infrastructure	1) Planned expansion of health infrastructure	Not planned	0	0	Draft	N/A	1	Final Draft in place Awaiting presentation to Top management and then STM
	2) Construction, rehabilitation / expansion and equipping of health facilities	1	Not planned	0	On-going	N/A	1	The construction of the Uganda Heart Institute is ongoing. Current progress 20%
	3. New Regional Referral Hospitals established (Number)	2	Not planned	0	0	N/A	N/A	RRHs were not established due to lack of funding

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24				
	4. General Hospitals constructed or upgraded (Number)	2	4	2	0	4	3	3 HC IVs are being upgraded to General Hospitals, Rukoki in Kasese, Mitooma in Mitooma, Muko in Rubanda, at 40% average progress of construction	
	5. General Hospitals rehabilitated (Number)	1	2	3	11	3	13	3 GHs have been fully rehabilitated (Kawolo, Gombe and Busolwe) 12 General hospitals have been partially rehabilitated (Kambuga, Kapchorwa, Kitgum, Kotido, Itojo, Katakwi, Kaberamaido, Busolwe, Amuria, Koboko and Luwero, Kitgum).	
	6. HC Ills constructed (Number)	2	12	56 (under construction)	14	44	38	38 new HC Ills were constructed	
	7. HC IVs constructed / renovated (Number)	2	9 Bugaya, Kumi, Ongicha, Kazo, Apapai, Butebo, Kityerera, Bukuya and Kachumbala HC IVs	16 (under construction)	11	10	10	34 HC IV have been established through upgrade of HC Ills to HC IV. 27 HC IVs have had infrastructure improvement and expansion.	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24				
	8. HC IIs upgraded to HC IIIs (Number)	64	37	44	168	N/A	27	In total 414 HC IIIs were established and 40 HC IIIs were renovated and expanded in the last 5 years under UgiFT and URMCHIP	
	9. HC IIIs renovated (Number)	0	43	11	0	N/A	N/A	In the last five years 79 HC IIIs were renovated and expanded under URMCHIP and GoU, while 38 new HC IIIs were constructed under UgiFT, KIDP, and GoU.	
	10. MoH headquarters rehabilitated and retooled.	1	1	1	1	1	1	MoH headquarters was renovated and undergoes continuous minor renovation every year.	
3) Improved health care waste management	11. High-capacity regional incinerators constructed, equipped and operationalized (Number)	Not planned	Procurement initiated	4	5	N/A	N/A	5 regional incinerators have been established KCCA (Mukono), Fort portal, Lira, Gulu, Mbarara The incinerators have been supplied, delivered and installation is ongoing	
4) Increased availability of safe blood	12. Blood Banks constructed (Number)	Not planned	1 (Soroti RBB)	3	3	N/A	N/A	3 blood banks were constructed, equipped and commissioned (Arua, Hoima, Lira)	

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2023/24			
5) Increased coverage of health workers accommodation	13. Blood storage facilities (fridges) procured (Number)	42	15	0	4	20	26	26 blood bank storage sets (Fridge, freezer, centrifuge, water bath, solar) were provided under UCREPP Additionally, 60 fridges are expected to be provided under GF	
	14. Public health sector staff houses constructed (Number)	100	53	53	114	47	47	In the last five years, a total of 970 staff house units were constructed Ugift (439 blocks- 878 units) KIDP (30 blocks – 60 units) GoJ (2 blocks – 32 units)	
Intervention 5.2 Improved capacity for operation and maintenance of medical equipment									
6) Functional medical equipment	15. Medical Equipment Policy developed	Not planned	0	1	1	N/A	1	The National Medical Equipment Regulations, 2024 were developed and launched	
	16. Medical Equipment list and specifications reviewed	Not planned	Review ongoing at 80%	1	1	N/A	1	The National Medical Equipment Specifications, 2024 were developed and launched	

Outputs	Indicators	Performance					Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24				
	17. Medical equipment inventory maintained and updated	1	1	1	1	1	1	<p>The medical equipment inventory system was maintained and updated.</p> <p>Update is made using a computer application/system (NOMAD)</p> <p>The total number of equipment so far captured in the system is 84,819 (representing an estimated 80% of the total equipment). Of these 71,788 (85%) are functional, while 9,467 (9%), need repair and 5,489 (6%), need replacement</p>	
	18. Fully equipped and adequately funded equipment maintenance workshops (%)	12	30	80	90	60	100	<p>All the 16 Regional workshops are functional in terms of staff, tools, though some workshops lack standard workshop blocks (Mbarara, moroto, mubende, masaka, Entebbe, Arua)</p>	
	19. Health workers trained in Medical Equipment Use (Number)	25	200	200	722	200	216	<p>216 health workers were trained in medical equipment use</p>	

Outputs	Indicators	Performance				Target	Performance FY 2023/24	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 5.3 Procure, distribute and maintain appropriate medical equipment at all levels of health service delivery.								
7) Health facilities at all levels equipped with appropriate and modern medical and diagnostic equipment.	20. Basic equipment available at lower-level health facilities (%)	No data	70	70	70	75	80	Equipping functionality continued to improve for essential equipment at all levels of healthcare. This was boosted by UGIFT, URMCHIP and UCREPP projects that equipped some selected HC IIIs and HC IVs facilities across the country.
	21. HC IIIs equipped (Number)	0	50	232	65	30	195	
	22. No. of HC IVs equipped	Not planned	45	45	0	10	10	
	23. Vehicles procured (Number)	439 GAVI, 65 C-19 Donations, 20 URMCHIP, 282 C-19 Fund	72	156	72	10	47	
8) Functional MoH fleet	24. No. of motorcycles procured	898 URMCHIP, 657 GAVI, 122 GF-TAM, 19 C-19 Donations	100	325	420	N/A	216	206 motorcycles procured through UCREPP and 10 from IGAD

Objective 6:

Ensure availability of quality and safe medicines, vaccines and technologies.

There are 12 key outputs, and 13 performance indicators assessed under objective 6 of which 1 indicator was not planned for assessment this year. The MoH achieved 83% (10/12) of the indicators assessed, made some remarkable progress in 8.5% (1/12), and there was minimal or no progress in 8.5% (1/12).

Table 101: Progress in Implementation of Strategic Objective 6 of the MOH Strategic Plan

Outputs	Indicators	Performance				Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 6.1 Ensure proper forecasting and quantification of the national essential medicines and health supplies requirements								
1) Medicines and health supplies availed	1. Health workers trained in Supply Chain Management (Number)	269	2,763	1,120	2,144	200	250	Training was addressing Pharmaceutical Supply Chain Management
	2. Hospitals and HC IVs with functional Medicines & Therapeutic Committees	No data	No data	143	31	70	150	With Support from National medical stores that is addressing strategy 5.1 activity No3 in the National Pharmaceutical services strategic plan a few health facilities have been brought on board
2) Integrated supply chain management system	3. Health commodities integrated in the national supply chain management system (%)	100	85	100	100	100	100	Integration of National quantification of all health commodities has been achieved. The second edition of the report will be out within the next two quarters.
3) Operational framework in response to public health emergency threats in place	4. National Medical Counter Measures Supply Chain Plan developed	Not planned	Plan in place	1	NA	NA	1	Already achieved FY2024/2025 We developed guidelines to implement the MCP.

Outputs	Indicators	Performance				Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 6.2 Strengthen the pharmaceutical information management systems to enhance traceability and accountability of EMHS.								
4) e-LMIS system scaled up to all health facilities	5. Health facilities utilizing the e-LMIS (%)	36 (715 public facilities)	40	90 (1,348/1,500)	45	80	97 (1,462/1,500)	Most of the Health Facilities are now using the e-LMIS since it's a must to use the electronic system for commodity ordering
Intervention 6.3 Slow down and control the spread of resistant organisms								
5) National Antimicrobial Consumption and Use surveillance plan developed	6. Antimicrobial Consumption and Use surveillance plan developed	Not planned	Not planned	0	1	1	1	The tools have been developed, launched and currently have 71 functional AMS Committees
6) Surveillance of antimicrobials use in human health done	7. Antimicrobial consumption and use surveillance reports (Number)	1	2	0	1	1	2	Generated on a Biannual basis.
Intervention 6.4 Develop a reporting platform for monitoring implementation of ADR reporting and management at health facilities.								
7) Community and consumers sensitized on appropriate medicine use, antimicrobial stewardship and patient reporting of suspected ADR.	8. Community sensitization activities (Number)	Not planned	0	0	13	10	4	Activity is conducted quarterly
Intervention 6.5 Promote local pharmaceutical manufacturing in Uganda.								
8) Pharmaceutical Industrial Park established	9. A PPP investment plan for production of medicines and health supplies in place	Not planned	Concept note developed	Presented to WG	0	1	0	The Pharmaceutical Industrial Park was allocated gazetted land in Nakason-gola; however, its investment plan has not been developed with input from DPNM, as DPNM staff are not involved in the international and local meetings addressing this area.

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2024/25			
Intervention 6.6 Strengthen pricing mechanism for health commodities									
9) National Medicines Formulary including indicative prices disseminated	10. National Medicines Formulary including indicative prices finalized	Not planned	Draft in place	0	0	1	1	The process has started to have the national medicines formulary revised. DPNM and NDA are taking lead. We are tracking progress	
Intervention 6.7 Integration of Traditional and Complementary Medicines in medical practice in Uganda.									
10) Situational analysis of the Traditional and Complementary Medicines (TCM) conducted	11. TCMs situation analysis undertaken	Not planned	Not planned	0	0	NA	NA	This will be done when the traditional and complementary medicines council has been put in place	
11) National Formulary for TCM products developed	12. National Formulary for TCM products in place	Not planned	Not planned	Not planned	0	1	1	Regulations for TCMPs are not yet developed In the month of August 2025, the Hon Minister of Health has written to Various associations to nominate members to the TCM council.	
Intervention 6.8 Establish an efficient, safe and environmentally sustainable Healthcare Waste Management System.									
12) Guidelines on HCWM were revised and disseminated.	13. Guidelines revised and disseminated.			Consultant engaged	Draft	NA	1	The strategy was approved and guidelines disseminated.	

Objective 7:

Accelerate health research, innovation and technology development

There are 8 key outputs and 8 performance indicators for objective 7 of which 1 indicator was not planned for assessment this year. The sector achieved 71.6% (5/7), made some progress in 14.2% (1/7) and made no progress in 14.2% (1/7) of the planned outputs. The National Health, Research and Innovation Strategy and MoH Research agenda were not developed to guide the sector in research.

Table 102: Progress in Implementation of Strategic Objective 7 of the MOH Strategic Plan

Outputs	Indicators	Performance				Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24			
Intervention 7.1 Establish the national health innovation cluster								
1) National Health, Research and Innovation strategy developed and disseminated	1. National Health, Research and Innovation strategy developed and disseminated	0	0	0	0	N/A	N/A	
Intervention 7.2 Develop a MoH research agenda								
2) MoH research agenda	2. MoH research agenda developed annually	0	0	0	Draft	1	1	
Intervention 7.3 Evidence generation								
3) Health Surveys undertaken	3. Health surveys conducted (Number)	3	2	3	2	3	3	UPHIA 2025 MR2 Uptake survey 2025
		Covid-19 SERO status surveys and National Client Satisfaction Survey	NHA 2016/17 – 2017/18, Client Satisfaction Survey	Client satisfaction for Acholi sub region, HHFA, NHA 2018/19 – 2019/20	STEPS 2023, UDHS 2022			

Outputs	Indicators	Performance					Target	Performance FY 2024/25	Remarks
		2020/21	2021/22	2022/23	2023/24	2024/25			
Intervention 7.4 Conduct basic epidemiological, applied, interventional and operational research.									
4) Research conducted and published	4. Research / studies conducted (Number)	53	10	>10	6	10	7	<p>Document – Uganda – Food Security and Nutrition Assessment (FSNA) 2024</p> <ul style="list-style-type: none"> • Effect of Indoor Residual Spraying on malaria incidence in West Nile, Subregion, Uganda, 2017– 2024: Time Series Analysis • Food security and nutritional supplementation assessment • Evaluating Diagnostic Accuracy of Artificial Intelligence Image Reader Versus Human Reading for Malaria Rapid Diagnostic Tests by Village Health Teams in Uganda • Comparative Quasi-Experimental Study of Community Health Worker Performance in Moyo and Adjumani Districts, West Nile Uganda: • IPC acute food insecurity and acute malnutrition analysis 	

Outputs	Indicators	Performance					Target	Performance	Remarks
		2020/21	2021/22	2022/23	2023/24	FY 2024/25			
Intervention 7.5 Establish a national health research knowledge translation platform and database.									
5) A National health research knowledge translation platform and data database developed	5. National health research knowledge translation platform and data base in place	Not planned	0	0	1	1	1	1	https://research.uncst.go.ug/admin/update.php?a=7f39f-8317fbd1988ef4c628eba02591
Intervention 7.6 Digitalization of the HIS									
6) GIS coding of health facilities done	6. Health facilities coded (%)	100	100	100	90	100	76	New health facilities established (HCIs and HCIVs) and yet to be coded.	
7) National Health Information Exchange Registries (Client, Health Workers, Health Facilities and Health Product) developed	7. NHIER operational	TORs developed and consultancy services procured	1	1	0.5	1	1	Health facility and Product registry ready pending training of users Client registry still under development	
Intervention 7.7 Establish the national health innovation cluster									
8) National health innovation cluster operationalized	8. Health innovations and technologies developed and supported (Number)	0	0	0	2	5	3	National Health Managers Performance Management Dashboard, Selfcare application, & budget tracker.	

No	Project Title	Start Date	End Date	Forecast Disbursement FY 2024/25	Actual Disbursement FY 2024/25	Progress / Remarks
	Rehabilitation of General Hospitals (Spanish Debt Swap Program)	1/07/2017	30/06/2026	USD 17,374,378.81	USD 12,698,792.74	Rehabilitation of Medical buildings and staff houses and procurement of Medical Equipment for Kawolo and Busolwe that are 100% finished
	Construction and equipping of the International Specialized Hospital in Uganda	2019/20	30/06/2020	USD 249.9 million	0	The Progress of work (construction) is at 45%. The training block and Hostel were completed and handed over. The main Hospital building is at sub structure level (the structure was completed)
	Uganda COVID-19 Response and Emergency Preparedness Project	3/08/2021	30/06/2025	USD 195,500,000	USD 157,200,000	The project ended, in close-out period
	Global Fund for AIDS, TB and Malaria (NFM 2, NFM3, GC7)	1/07/2010	31/12/2026	UGX 702 billion	UGX 702 billion	Grant was affected by delayed approval to implement most planned activities. Major procurements are still ongoing, so payment is not yet effected.
	GAVI Vaccines and Health Systems Strengthening Support	1/1/2024	31/12/2025	UGX 200 billion	UGX 51 billion	In the last year we were starting a new grant, while we expected disbursements by 1st July, the initial disbursement came in September 2024 so implementation started late
	Construction of 138 Health Centre Ills in sub counties without any health facility	2020/21	2024/25	UGX 55.1 billion	0	Funding goes directly to LGs. However, 46 new HC Ills have been constructed with 93 remaining.
	Italian Support to the Health Sector Development Plan Karamoja Infrastructure Development Project - Phase II	2021/22	2024/25	UGX 15,390,762,114	UGX 15,390,762,114	New health centre Ills and 29 other health facilities rehabilitated (staff houses, maternity/general ward, OPD, fencing), 6 Ambulances procured, 18 motorcycles and 9 Public Address systems
	Upgrade of ICUs in all RRHs, HDUs in all RRHs and GHs	2020/21	2024/25	UGX 18.5 billion	0	Construction/remodeling for the standard ICU is going on in Mbale RRH ICU which is at 90%, and Masaka ICU remodeling is at 80% completion
	Improvement of Radiology Services in RRH and General Hospitals	2020/21	2024/25	UGX 39 billion	0	Construction of new standard ICU under UCREEP Project has started for 3 RRHs (Hoima, Kabale and Arua) 14 out of 16 RRHs have been equipped with CT scanners. The CT scanners were commissioned and are functional. The two hospitals that lack the CT scanners (Kayunga and Yumbe)

No	Project Title	Start Date	End Date	Forecast Disbursement FY 2024/25	Actual Disbursement FY 2024/25	Progress / Remarks
	Establishment of Electronic integrated and patient management record system	2020/21	2024/25	UGX 0	0	The Electronic integrated and patient management record system has been established in 79 health facilities (4 NRH, 15 RRH, 54 GH, 4 HCIV and 2 HC Ills).
	Functionalizing neonatal intensive care units (NICUs) in all RRHs and select GHs	2020/21	2024/25	UGX 0	0	All RRHs and 25 General hospitals have NICU rooms equipped with basic equipment such as infant incubators, radiant warmer, phototherapy units and oxygen concentrators.
	Renovation and equipping of 15 General Hospitals (Abim, Apac, Atutur, Bugiri, Bundibugyo, Iganga, Gomba, Kagadi, Kambuga, Kitagata, Kitgum, Kyenjojo, Lyantonde, Pallisa and Masindi).	2020/21	2024/25	UGX 687.6 billion	0	There has generally been inadequate funding to rehabilitate all the planned hospitals. Only five (5) Hospitals out of the planned 15 hospitals have been partially rehabilitated since FY 2020/21: Gomba, Luwero, Koboko, Kambuga, and Kapchorwa.
	Establishing 12 regional Ambulance hubs	2020/21	2024/25	UGX 3 billion	0	There are two functional at Naguru NRH and Masaka RRH. 4 Regional Ambulance Call and Dispatch Centre are near completion in Arua RRH 80%, Lira RRH 80%, Mbarara RRH 80% and Mbale RRH 65%. 3 other regional centres are being set up in existing space by provision of equipment and communication solutions: Mulago; Yumbe and Jinja.
	Establishment of a National Medical Equipment Maintenance Service / System	2020/21	2024/25	UGX 10 billion	0	All the National and RRHs have functional equipment maintenance workshops.
	Establish permanent Port Health Services at 24 Points of Entry (2 high volume, 11 medium and 11 low volume).	2020/21	2024/25	0	0	Port Health Units have been established at the 2 high volume points of entry at Malaba and Busia Permanent Port Health Services established at 11 Points of Entry i.e., Goli One Stop Border Post (OSBP), Suam OSBP, Elegu OSBP, Mutukula OSBP, Busia OSBP, Malaba OSBP, Katuna OSBP, Mirama Hills OSBP, Mpondwe OSBP, Transami OSBP, Cyanika OSBP and Vurra
	Construction and equipping of Regional Blood Bank at Soroti	2020/21	2022/23	UGX 4.5 billion	0	Regional Blood Banks in Arua, Hoima and Soroti have all been constructed, and equipped and are all operational.

4.2 PROGRESS IN IMPLEMENTATION OF 30th JRM AIDE MEMIORE

No.	Issue	Recommendation	Timeline	Responsibility	Progress
1)	Leadership and Governance				
	Integration of health services is greatly undermined by fragmentation (siloes inputs and implementation).	Develop a health services integration framework for Uganda to guide all stakeholders in implementing activities at all levels.	June 2025	DGHS, DHS G&R	The National Integration framework for health services at all levels was developed and approved. The framework will be launched and disseminated at the 31 st JRM in December 2025.
	Address / improve inefficiencies in health service delivery.	Finalize and disseminate the Joint Planning and budgeting guidelines to facilitate implementation of the One Plan, One Budget and One M&E.	February 2025	CHS PFP	The Joint planning and Budgeting framework developed and approved. The framework will be launched and disseminated at the 31 st JRM in December 2025
	Poor performance in some regions / districts due to weak leadership, management and supervision by the LGs.	Communicate to the LG leadership to strengthen their oversight role through regular support supervision, monitoring and performance evaluations.	November 2024	PS / DHS G&R	LG across the country have been engaged during the quarterly integrated performance reviews to strengthen their oversight, support supervision, and monitoring to improve performance. Additionally, region based integrated support supervision activities have been undertaken, led by Top management, recommendations made and followed up especially for underperforming LG.
		Develop and disseminate health service monitoring checklists for LG Leadership.	March 2025	CHS SCAPP	MOH has developed an integrated support supervision tool that will guide both LG and RRH during support supervision. The plan is to digitize the tool.
	Inadequate support and engagement of the MoH in the Regional Supervisory Mechanism	Establish a forum for regular strategic level engagements between the RRHs and MoH Heads of Departments to streamline the stewardship role.	April 2025	CHS SCAPP	Multiple fora have been established to strengthen coordination and stewardship of service delivery at regional level. Monthly Executive consultants meeting with MOH Top Management, Quarterly Executive consultants' meetings, where they Copt Top Management and Technical Leadership. Forums for Regional Performance Review and Integrated Service Delivery have been established. These bring together the MOH Top Management and RRH leadership together.
	Delayed induction of Hospital Management Boards affects hospital performance under leadership and governance assessment	Decentralize the responsibility of induction of Hospital Management Boards to the Referral Hospitals	June 2025	DGHS	Consultations are still ongoing on how to decentralize induction of hospital boards. However, most of the RRH and National Level Health Institutions boards were constituted, inducted and functional. Process underway to update membership where Boards have expired. (Masaka)

No.	Issue	Recommendation	Timeline	Responsibility	Progress
2)	Human Resource High rates of absenteeism by staff exacerbated by health workers on continuous training for upgrading	Develop or implement a training plan that ensures an organized award of study leave	June 2025	CHS HRD DHOs/Municipal/City Health Officers	The MOH has organized a structured training for LG health care managers (DHT, CHT, MHT) in management. The training includes HR panning.
		Put in a place a Human Resource Development framework that guides on which courses are relevant based on their current work.	Medium term		The MOH is currently reviewing the HR for health 10year Strategy. This will inform the development of a comprehensive HR development framework.
3)	Health Infrastructure Inadequate funding for rehabilitation of General Hospitals infrastructure	Develop a list of hospitals that need to be rehabilitated. Prioritize hospitals that are in a poor condition and develop project profiles for funding under the NDP IV	February 2025	CHS HID	The List of the GHs have been developed and the profile is in place for submission to MoFPED. This includes 16 General Hospitals: Abim, Apac, Aturur, Itojo, Bundibugyo, Kagadi, Kitagata, Kitgum, Pallisa, Kiboga, Masindi, Tororo, Bududa, Gombi, Kambuga and Kapchorwa. This will require estimated Ugx.1,632,332,426,379 over a period of five (05) years.
		Present the additional cost requirement to MoFPED for resource allocation and clearance of the arrears.	November 2024	PS / Hospital Directors	Costs required for maintenance and, utilities and clearance of arrears were profiled Maintenance and repair of 32 PSA oxygen plants across the country will require Ugx. 6.13Bn. Electricity Bills for PSA plants across the country will require 9.6Bn per year. 20 New Oxygen plants were procured and installed during COVID-19 and have never been functionalized. These requires Ugx. 8.6Bn to procure high-capacity transformers, high voltage power stabilizers and cabling. MOH engaged MOFPED in several meetings regarding the arrears, utilities and costs of maintenance. Funds have not been appropriated yet.
		Provide adequate funding, human resources and equipment to the regional blood banks to enable them become fully functional.	June 2025	PS/Director UBTS	The facilities constructed in Arua, Soroti and Hoima have all been completed, equipped and the funds to recruit staff were provided. They have all been functionalized and are operational.

No.	Issue	Recommendation	Timeline	Responsibility	Progress
	Poor access to health services for hard-to-reach areas especially Karamoja.	Procure mobile Vans for integrated outreaches for hard-to-reach areas of Karamoja.	Medium term	PS / Partners	New OPDs, Maternity blocks, theatres and construction of staff house are ongoing through Italian support and UgIFT Old structures are also being improved and expanded. Integrated outreach vans with mobile CXRs and laboratories have been procured for all RRH, including Moroto RRH which will serve the Karamoja region.
4)	Health Financing				
	Off budget financing was not included in the AHSRP	Include the off-budget financing report finalized in the annual sector performance report.	June 2025	HDPs / CHS MSC & HP	Data collection for off-budget resource tracking FY 2024/25 and data analysis completed. The report is yet to be validated.
	Non-disclosure of Development Partner funding in LGs	Include a session on alignment of off-budget and development partner sponsored projects to national health priorities in future JRM's.	October 2025		This is not yet on the program for the JRM. Preference was to establish systems for tracking off budget support. The system is in place and robust analysis will be conducted and discussed next Year's meeting.
	Reduce fragmentation of off-budget resources.	Development Partners to provide IPFs for inclusion in the BFP as per the BCC	November 2025	Chair HDPs, IPs	This is not yet achieved. However, MOH has developed and digitized a pattern mapping and tracking tool to improve transparency and disclosure of available funding.
	Inequitable allocation of non-wage resources to RRHs.	Strengthen a virtual pooling option where off-budget funding is declared and factored in the IFMs and in the work plans at national and sub national levels.	Medium term	HDPs	The virtual pool has been developed. It is hosted on the MOH server. MOH is now developing the governance structures and functions of the virtual pool.
5)	Medicines and Health Supplies				
	Inadequate GoU financing for Medicines at 3 USD per capita per year.	Develop an allocation formula for Regional Referral Hospitals.	June 2025	CHS PFP, ACHS B&F, Hospital Directors	A concept to equitably allocate non-wage to RRH has been developed. The plan is to improve and expand the current result-based financing model to general and regional referral hospitals.
	Incomplete data on ARV stock status at health facility level	Develop a policy brief for engaging Parliament on increasing GoU budget allocation for medicines and health supplies.	March 2025	CHS Pharmacy	Policy brief developed and disseminated among stakeholders including parliament to advocate for phased increase in the budget allocation for essential medicines and health supplies as per the 10-year supply chain roadmap.
		Dissemination of the revised HMIS tools to ensure accurate reporting of commodities at lower-level health facilities	Immediate	CHS Pharmacy, ACHS HID	Revision of the HMIS tools was completed and the tools are being piloted. Feedback from the pilot will refine the tools prior to approval by Top management

No.	Issue	Recommendation	Timeline	Responsibility	Progress
6)	Service Delivery Insufficient funds for ambulance servicing including maintenance at the regional hubs.	Prepare a Cabinet Memorandum on increasing funding for operations and maintenance of ambulances.	November 2024	PS	Funding ambulance servicing and maintenance at the regional hubs was included in the cabinet memo for additional sector funding. It is still an unfunded priority in the MPS 2025/26
		Recentralize maintenance of ambulances to regional level.	June 2025	CHS EMS	MOH engaged with LGs and the recentralization of ambulance maintenance was not agreed. The parties agreed to advocate for more resources to support repairs and maintenance
	Growing burden of NCDs, Communicable diseases and malnutrition.	Prioritize funding and implementation of Community Health interventions across the country. Countrywide scale up of CHEWs	FY 2025/26	CHS CH, LGs, Partners CHS HPE	The Ministry of Health with support from partners (World Bank, Global Fund, USG and Mastercard foundation) has mobilized resources to scale the CHEWs program country wide, in a phased manner By end of FY 24/25, 5288 CHEWs across 2699 parishes in 38 districts were trained and equipped An additional 3144 CHEWs in 1577 parishes in 32 districts will be starting training in January 2026. MOH is continuing to advocate for increase government allocation to CHEWs program.
7)	Health Information System Incomplete reporting from private health providers	Work with the private sector to jointly establish a mechanism for ensuring regular reporting from the private health providers.	April 2025	CHS MSC & HP, ACHS HIM, UHF, Medical Bureaus, Health Professional Councils.	MOH has Integration of Private facility EMR with DHIS2- This has been tested, and a pilot has been planned. MOH has included private health providers in HMIS trainings. Joint support supervision of private health facilities to ensure reporting has been undertaken.
	Reporting on vital Statistics	Work with NIRA to establish a holistic, interconnected system that tracks the registration of birth and death.	June 2025	PS/ CHS PFP and NIRA	DHIS2 is integrated with the NIRA system (MVRs) and captures deaths and births. The interoperability enables analysis. The birth notification form was integrated with HMIS (Maternity register to facilitate birth notification.
	Capturing of Community Programme Performance indicators beyond the health facility.	Leverage on Community-led monitoring to obtain more comprehensive reporting for all diseases.	Medium term	PS/ CHS (CH) and PFP	This has commenced. MOH – Community health department convened an inaugural meeting with CSOs to discuss community led monitoring. Based on the feedback from this meeting, the community health department is leading the development and institutionalisation of a community led monitoring and social accountability framework.
